Oh, that's really a reach. I really doubt most of the stations would go the
pay route, even if they were offered the chance. But a few might, just as a
few TV stations had a fling with pay TV about 25 years ago.

But let's pretend the unimaginable happened. All the stations went
subscription. All the network stations, all the independents, all the
brokered stations, all the college stations ... well, you get the idea.
Then I guess poorer people -- that is those poor people who hadn't moved to
alternative sources and actually wanted to listen to the radio -- well, I
suppose they'd have to pay to listen to the radio.

Gee, I suppose some of those poor people might have to decide between pay TV
and pay radio:

"62 percent have cable or satellite TV reception. "

http://www.heritage.org/Research/Welfare/bg1713.cfm

It would be interesting to see how this turns out, if radio ever goes
completely to subscription. But, for some reason, I really, really doubt it
will ever put itself to that test.

But maybe there's teeming masses of impoverished Americans who are now
barely able to afford radio. Are they able to buy batteries? If you start
a charity drive to collect batteries for destitute radio listeners, I'll
contribute some new AAs.

Actually, I was thinking about rap. It's summertime, and I drive with my windows down. I hear alot of stuff which is, to put it mildly, unfit for mass radio. I'm guessing I'm hearing recordings.

Mine has sentimental value as well. Purchased just prior to Operation Frequent Wind. Sent it to my dad. I have since inherited it, and had his name and mine engraved on the back. At one point in time I owned six of the buggers, Submariner, GMT Master, etc. They were relatively inexpensive through either the ships store or the Navy Exchange system.

I've read some about perceptual coding. I've heard .wav files
of the same piece of music coded with limited resolution vs
perceptually coded. They both had the same mean squared error
but the limited resolution version was distinctly noisy and the
perceptually coded one sounded near clean. I believe mp3 effectively
uses at least some perceptual coding.

> I have never heard a 7kbps stream as good as FM BCB. In fact, there
> isn't a telco system with a bit rate that low.

Right and telcos don't approach FM quality. But they are
not in the music/entertainment business. People use phones for
verbal communication. The phone companies are not going
to invest in the coding and power needed for FM quality.

I see from your other posts that you understand Nyquist.
Right. Ignoring quantization noise, if you sample at Fs you can
perfectly reproduce frequency components up to Fs/2
(or .9 x Fs / 2 practically speaking).
Then when you consider quantization noise you can just
use the rule of thumb that you get 6 dB of SNR for each bit.
So if you use a 16 bit ADC you have an SNR of about 96 dB.

Top quality component hi-fi audio amplifiers are on that order.

Even the old GSM was 9600bps on the codec.

What you do to evaluate codecs is compress, decompress then convert to PCM. Put the audio on a CD with the original pure PCM and the PCM that represents the codec audio. Play this CD on your stereo, not a freaking computer. Even high bit rate MP3 can be detected.

The problem with all these digital radios is they push compression to the max, i.e. to a point where it is inferior to analog. While people bitched and moaned about the sample rate on CDs being too low, CD audio is superior to the alternatives.

3265. New "E-Probe" Design VLF LF AM {Medium Wave} Active Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-07-20 21:59:42 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1153432782.492087.181240@m73g2000cwd.googlegroups.com>
Source record: 84352

For One and All,

Here is a New "E-Probe" Design VLF LF AM {Medium Wave} Active Antenna
-by- PaulC [W1VLF]
* Four Detailed Photos
* 32" Stainless Steel Whip Antenna
* Overall Length less than 39"
* Coverage from 10 kHz to 2 MHz
[The Entire AM Medium Wave BCB]
* With 'reduced' Coverage up to 30 MHz

NOTE - Other RRS Messages Posted about W1VLF Antenna Designs
http://groups.google.com/group/rec.radio.shortwave/search?q=W1VLF&start=0&scoring=d&

W1VLF -writes- {WoOps wITH My Re-eDiTing hErE ~ rhf ;-}

Hello All - You are looking at a W1VLF Active Antenna.

This is a E-Probe type Active Antenna as opposed to the
Loop type Antennas that some of you folks are used to
seeing in my eBay Auctions.

The Antenna actually covers from 10Khz up to 30 Mhz
but the response rolls off a little at the top of its Range,
so I am selling this as a VLF LF MF Antenna Only.

Designed to be 'remotely' Powered this is the ideal Antenna
to put "out to pasture".

In other words "Locate" this Antenna as Far Away from
Noise Sources, Power Lines etc.as possible. It's small
size allows you to move the Antenna looking for the
quietest location. This is not a good Antenna for use
inside the house.

I use one of these with 200' of RG58 for general listening
on my Harris RF -590 and HP selective level meter.

Any Questions and Comments ?
- - - Send them to PaulC (AT) SNet [Dot] Net

Thank You ~ W1VLF

- - - - - - - - - - What I See - What It Is - - - - - - - - - -

OK - Appears to be very much 'standard' E-Probe {Whip}
Active Antenna construction.
* Out-Side - PVC Active Antenna Housing with Whip Antenna

coming out the top.
* Assume that the Coax Cable connector on the bottom
is BNC since the Power Invector uses BNC Connectors.
* In-Door - Power Injector with BNC Connectors that
requires 12VDC source.
* You supply your own Coax Cable {Up to 200 Feet}

QUESTION - Could this be the 'new' Active Antenna in the
W1VLF "Skunk Works" {under Design and Development}
that PaulC wrote about ? ? ?

Oops - Almost Forgot ! - Here is the {Missing} Link for the
eBay Auction Listing # 300008650914 to the W1VLF :
New "E-Probe" Design VLF LF AM Active Antenna

CM,

OK - Lets make "CW" 5 WPM a High School Graduation Requirement
and Start the Nation-Wide Testing of Every Child at Every Grade Level
to Ensure that Our Kids Know "CW" ! ! !

We can call it the Uniform Education "Code" {CW} Law -and-
Require that No Child Is Left Behind the "CW" Learning Curve !

Why should only White Males 'know' CW ? ? ?
Equality Demands that Women and Minorities "Know" CW Too ! ! !
- - - We need an Urgent National Federally Funded Program
to Close the "CW" Gap [.]

oops - am i ranting ? ? ? . . . oh never mind ! ~ RHF

Yes, but you put words in the mouth of the pervious poster.

> SNR doesn't figure in quality? Can you give an example of good
> quality with a -90 dB SNR?

Sure, I have several analog radios with > 100 dB of dynamic range. They are ball park around 1 uV sensitivity like most SW radios. With a good signal I can turn up the volume as loud as I care to and not hear background noise for stations from around the world, which is an example of real use of signal to noise instead of referring to a number.

And heck add sync detection a good signal sounds like a local broadcaster. This is important to me because I am program listener.

> done on movie films? Why do cable TV companies charge more for
> digital TV? Why would anybody pay for it if analog is better?

There are lots of reasons to convert information to digital.

1. Processing. Once converted to digital you can process the information with algorithms using software on general purpose computers instead of building analog hardware circuits for each function and digital circuitry can perform that function with greater precision.

2. Storage. On media like CDs or hard disks you can store a vast amount of information and find it quick.

3. Transport. Converted to digital it can go over the Internet.

4. Cheap. Media to put information onto like CD and DVDs.

Analog TV is not very high quality and with modern larger display devices people want a better picture. A bigger display needs a higher resolution to look good and not pixelated and the digital standards provide that over analog. This is not a problem for radio and is actually the reverse where people want to transmit additional information in the same bandwidth so the audio suffers.

Digital is not better than analog. It's just another technology with a different set of advantages and disadvantages.

> channel symbol using QAM. Then your symbol rate/bandwidth is under 7
> kHz. (Granted you will need an SNR of about 60 dB or better comming
> out of the channel in order to be able to decode it.)

The power you would have to apply is not practical. You would need a comb filter to detect the carriers < 400 Hz apart. In order to keep all the spectral energy within the 7 KHz would require all carriers to be very soft cornered and sloped edged but the < 400 Hz apart carriers need to be very sharp and defined to be detected without error because they are so close together. A back of the envelope calculation of data rate divided by the number of symbol carriers does not mean it is doable. It would be tough to actually operate a broadcast transmitter and keep

spectral energy in that 7 KHz. You would need a lot of power to get a very strong signal at the receiving end to make this work.

And you are not going to get the 128 Kbit channel because you need some kind framing (overhead), error correction, and the system will have to send other information because people will demand it otherwise it will be no real improvement over the current analog system. People will also screw with the audio once it is digitized and want to compress it generating artifacts.

Another price to pay is buffer time. You tune in a station and nothing happens for some length of time. That time could be on the order of 5 to 10 seconds. If the received signal level varies then the audio starts and stops, which is very jarring and nobody will like this behavior. This is much more annoying than the analog fading or having a little background noise.

And yet another drawback is the receiver has more circuitry for all the additional processing will require more power and shorter battery life. Even if you got the whole radio down to one chip it will still take more power to run it than a simpler analog radio.

I think 16 KHz would be a practical minimum bandwidth with a station spacing every 20 KHz for a digital system to be an improvement over a the current analog scheme.

I define improvement as more than what is currently available, which requires more bandwidth be used for a single channel. If you take up the same bandwidth with the same or a different system then either nothing changes or you trade some advantages for others. There is no magic digital system that can stuff more information into the same bandwidth.

- what is a vole?

A "VOLE" is a small Rodent resembling a Mouse
but with a stouter body, a shorter, hairy tail, and
smaller ears and eyes.
http://www.cooperseeds.com/voles.php3?
http://en.wikipedia.org/wiki/Vole
Typically a mini-rat that eats your flowers.

and now you know ~ RHF

> Ridgh

You might be able to get it higher with more inductor adjustments, I don't know the circuit. Maybe have to add some capacitance to the tank.

Here's your real problem though. Broadcast FM is wideband. FM communications 135-175 MHz are narrow band. That means more modifying is needed to the receiver in order to hear the narrow band FM better.

It would be easier just to buy a cheap VHF receiver. Talk to the people in rec.radio.shortwave for ideas on cheap plastic receivers. They're experts.

Many SWL's are Ute listeners. They are the ones most likely to stumble
across an SOS.

Just like a person isn't a real ham unless they've passed a code test, a
shortwave listener isn't a real SWL unless their receiver has a BFO.

(SWL's who listen to shortwave with antique receivers are exempt.)

Millions dead and a century of propaganda lies and you want me to summarize?

It all boils down to a war of Islamic Jihad ideology vs. Judeo Christian
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23406

Haj Amin al Husseini the Mufti of Jerusalem, and former president of the
Supreme Muslim Council of Palestine urged Hitler to not allow Jews to flee
to Palestine, and to exterminate them instead. (Serge Trifkovic, The Sword
and the Prophet)

According to German officials who knew the Mufti:

"The Mufti had repeatedly suggested to the various authorities with whom he
was maintaining contact, above all to Hitler, Ribbentrop, and Himmler, the
extermination of European Jewry. He considered this as a comfortable
solution of the Palestinian problem."

When Haj Amin al Husseini, spoke together with Hitler on Berlin Radio in
1942, he cried out:

"Kill the Jews - kill them with your hands, kill them with your teeth - this
is well pleasing to Allah."

http://www.afsi.org/arablies.htm

Fast forward to the 1988 Charter of Hamas:

Article 32 refers to an infamous century-old forgery in almost the identical
terms used by Adolf Hitler: "Their plan is embodied in 'The Protocols of the
Elders of Zion', and their present conduct is the best proof of what we are
saying."

Article 22 is an update of The Protocols, alleging that "the Jews" control
all major world events. It is here quoted in full (but without the koranic

verses, which may be found on the various websites in both Arabic and English) . This article - and others - indicates the rich 'conspiracy thinking' of the Hamas Charter:

"For a long time, the enemies have been planning, skillfully and with precision, for the achievement of what they have attained. They took into consideration the causes affecting the current of events. They strived to amass great and substantive material wealth which they devoted to the realization of their dream. With their money, they took control of the world media, news agencies, the press, publishing houses, broad casting stations, and others. With their money they stirred revolutions in various parts of the world with the purpose of achieving their interests and reaping the fruit therein. They were behind the French Revolution [1789], the Communist revolution [1917] and most of the revolutions we heard and hear about, here and there. With their money they formed secret societies, such as Freemasons, Rotary Clubs, the Lions and others in different parts of the world for the purpose of sabotaging societies and achieving Zionist interests. With their money they were able to control imperialistic countries and instigate them to colonize many countries in order to enable them to exploit their resources and spread corruption there. You may speak as much as you want about regional and world wars. They were behind World War I, when they were able to destroy the Islamic Caliphate, making financial gains and controlling resources. They obtained the Balfour Declaration, formed the League of Nations through which they could rule the world. They were behind World War II, through which they made huge financial gains by trading in armaments, and paved the way for the establishment of their state. It was they that instigated the replacement of the League of Nations with the United Nations and the Security Council to enable them to rule the world through them. There is no war going on anywhere without them having their finger in it. [quotation from the Koran] The imperialistic forces in the Capitalist West and Communist East, support the enemy with all their might, in money and in men. These forces take turns in doing that. The day Islam appears, the forces of infidelity would unite to challenge it, for the infidels are but one nation."

Koranic quotes follow to prove the point: "if ye understand."

With the Hamas Charter now binding the Palestinian leadership, its call for the destruction of a Member State of the United Nations is in contravention to Article 2 (4) of the 1945 UN Charter. Article 3 (c) of the 1948 Genocide Convention condemns "direct and public incitement to commit genocide," which is punishable under its article 4. ������The grave situation in Gaza - and not only in Gaza - is linked to the Hamas Charter of religious and racial hatred, which merits debate at the Human Rights Council as soon as possible.

3280. Did You Hear These News Items Reported On The Radio?

Newsgroup: rec.radio.shortwave
Date: 2006-07-20 23:41:43 UTC
From: ~ <read@it.net>
Message-ID: <12c05f5e3rpvge1@corp.supernews.com>
Source record: 84368

Did you see these news items reported in the newspaper?

http://www.afsi.org/MEDIA/newsLinks/shockers/shockers.html

"The deliberate targeting of Israeli civilians is shamefully equated with the unintentional loss of Palestinian life that is the tragic but unavoidable consequence of legitimate warfare. Worse, since Palestinian terrorists both deliberately target civilians and hide behind them, Israel is cast as the guilty party because more Palestinians have been killed in Arafat's terrorist war than Israelis. No one, of course, would dare suggest that the United States was the guilty party in World War II because German casualties, which included millions of civilians, were twenty times higher then American casualties. So too, only a twisted and corrupt logic would paint America and Britain as the aggressors in the current war because Afghan casualties are reported to have well exceeded the death toll of September 11."

One of the clearest signs of the growing nazification of so much of the world's media is the increasing trend to label Palestinians atrocities, such as the exploding of the bus full of children in Haifa this week, as "Palestinian resistance". The PLO and its amen choruses routinely explain away such mass murders of Jewish children and other civilians as "Palestinian resistance", but so do the BBC and many other establishment media outfits.

Of course describing Palestinian behavior as "resistance" makes precisely as much sense as describing as "resistance" the campaign of the Wehrmacht and Gestapo in the 1940s against the various anti-German partisan forces. In other words, it is yet another Orwellian inversion. The Palestinians are not the forces that resist evil, but rather they are the savages. The Jews are those who are resisting savagery. Resistance against fascism and barbarism is what Israel does when it assassinates terrorists and blows up their homes.

The trendy use of the term "resistance" for Palestinian violence is a rather naked attempt by anti-Semites to justify those atrocities, exactly as would be an attempt to label 1944 German anti-partisan activity as "resistance". It is really entirely consistent with the long insistence by the press on referring to Palestinian mass murderers as "activists" and "militants", as if they are marchers in a gay pride parade or Save-the-Whales march, rather than terrorists and Nazis.

>
> Who was leading who on this? That is did the FCC decide out of the blue
> to
> deemphasize the clear channels or was it other stations who wanted to
> operate at night?

Neither. The 1-A clears organized into a lobbying group to try to ge thigher
power. The FCC reviewed this and the follow up presentations from the late
40's through about '67 when the commission finally said "no, never" and
decided to develop additional stations on the clear channels to provide more
local service, especially to grey areas, which was a major FCC goal in that
era.
>
> And why would they want to operate at night, anyway?

Everyone wants to operate at night, but we all wish there was no skywave, as
local coverage could be improved. In any case, nobody did not want to
operate at night... they just realized that skywave listening was pretty
much dead after the 1-As were broken down... 30 years ago.

>
> Is the Canadian phase out voluentary?

The CBC has moved nearly all operatins to FM from AM, and commercial AM
operators are encouraged to trade an FM for the AM, with the AM going
silent. This has been going on for over a decade.
>
> By the way, I happen to like listening to the brokered /ethnic stations.
> If

> that's all that's someday left on AM, AM will still be quite lively.

Certainly there will be limited viability. Many stations that are on SCA's
will possibly become AMs... we have Radio Tehran on our 107.5 in LA!
>
> I know I'm not the only person with the passion for radio, this group's

>
> I see. It's all the FCC's fault. I suppose that's another one of their
> silly decisions like when they were forcing stations to do "editorials".
> So, how long has the broadcast industry been fighting them on this?

The congestion of the bands is definitely due to the FCC seeking increased
grey area and local service from the 50's through the 90's.

The FCC never forced editorials. To the contrary, until the Fairness
Doctrine was killed under Reagan, we were very afraid of doing editorials
and very, very few of us did them due to the risks.

The FCC, buy restricting to low FM powers (100kw and under) and very low AM
powers (nothing over 50 kw) has always encouraged localism. As the clears
went form one fulltime signal to a dozen or so, the FCC was sayking that
they preferred a new local station in St George, UT., to extended coverage
for WLS:

This was the very loudly stated opinion of the FCC for years: local service,
local ascretainment, local ownership, etc.

> and pay radio:
>
> "62 percent have cable or satellite TV reception. "

And 42% do not.
>
> But maybe there's teeming masses of impoverished Americans who are now
> barely able to afford radio.

I did not say this. They can afford radio, but would not pay $150
discretionary dollars for what is also available for free. In case yu did
not notice, XM and Sirius have hit brick walls. XM stock is off 60% since
the end of last year due to slowdown in subscriptions; Stern is a band-aid-.
>>

- None of this matters. What matters is consumer perception,
- and if it is not digital, it is not good in today's world.

BAD - true, True. and TRUE !
[It Is A Digital World - Especially for the Younger Generation !]

- P.S. The AM has greater compression, but its apparent
- badwidth sounds pretty analog FM like.

- Have you ever listened to an HD AM using the current
- firmware (2.2.5) play music? It _does_ sound "like FM."

The problem that I have now up here in "Them-There-Hills" is
that the number of good sounding AM/MW Radio Stations
{Less-Than 10) is decreasing {IBOC background noise?} :
* FCC : 57 AM Records within 100 km {63 Miles} of 95370.

While the number of good sounding FM Radio Stations is
increasing due to More FM Radio Stations and Translators
{More-Than 30}.
* FCC : 204 FM Records within 100 km {63 Miles} of 95370.

FM "HD" {IBOC} Digital Quality Makes Sense {Cent$} !

Low Power (LP) FM that is Community Needs Based
and not simply Corporate Media Market Grabs is very
important to Rural Areas for Expanded Adult Cultural
Awareness and Increased Educational Opportunities for
the Young People growing-up in the country.

better sounding fm hd radio is good news ~ RHF

Interesting. Thanks for the info. I've never really gotten into LF or VLF, but that's primarily because I've never lived in a place that's quiet enough. Noise is such a huge factor when you tune "down there."

Steve

3298. APROVECHA ESTA OPORTUNIDAD

Newsgroup: rec.radio.shortwave
Date: 2006-07-21 00:44:22 UTC

Message-ID: <1153442662.881361.209790@i3g2000cwc.googlegroups.com>
Source record: 84385

Ahora es tu oportunidad; Mucho dinero con una inversion minima.
POR FAVOR LEA TAMBIEN EL FINAL DE ESTA CARTA; LE VA A INTERESAR Y SE MOTIVARA AUN MAS.
Hola amigos:
A continuación les contare como sucedió todo esto:
Este aviso realmente me llamo la atención, además de llegar oportunamente, y luego de pensarlo muy bien, decidí probar, solo necesitaba US$6.00(6 dólares), y pensé " no es nada, comparando con lo que se puede ganar ", y pude comprobar que de verdad funciona, no se como explicarles, pero la vida me cambio bastante; el sistema es muy fácil y funciona(totalmente comprobado), MIENTRAS MAS GENTE SE UNA... MEJOR y mas probabilidades tienes de ganar:
Este es el mensaje original y el sistema que me cambio mi manera de pensar y por el cual, ahora soy otra persona y que encontré en las NEWS, en el que entrega todas las instrucciones.
Dice así:
MENSAJE ORIGINAL.
Esto es lo que le paso a un amigo, días atrás, mientras navegaba por estas paginas de noticias, así mismo como usted lo esta haciendo ahora, se me apareció un articulo similar a este que decía:
"Usted puede ganar miles de dólares en pocas semanas con una inversión de US$6 dólares (seis dólares)", Enseguida pensé: "¡oh, no, otra estafa más ?", pero como la mayoría de nosotros, la curiosidad pudo más ,y seguí leyendo, y seguía diciendo:"
Usted enviará US$1.-(un dólar) a cada uno de los 6 nombres y direcciones mencionados en este articulo , entonces
usted anote su nombre y dirección al final de la
lista reemplazando al numero #6 , y envíe o ponga este articulo a por lo menos 200 NEWS GROUPS (hay miles de estos en todo el mundo).
Nota: Si te encuentras en otro país, debes cambiar tu moneda nacional a dólares, pues en todos los países cambian dólares y es más fácil para todos.
No existe ningún truco, la diferencia de este sistema y otros, es que usted tiene una lista de 6 en vez de 5, esto significa que su promedio de ganancia será aproximadamente ¡¡¡¡¡15 veces mayor!!!!!

Después de pensarlo una y otra vez y de consultarlo con unos amigos, decidí probarlo, pensé que lo único que podría perder era 6 estampillas y US$6 dólares y que lo tomaría como inversión verdad?
Como probablemente muchos de nosotros estaba un poco preocupado por la legalidad de todo esto. Entonces consulte al Correo Central y me confirmaron que en realidad era legal!!!!!!!. Me quedé asombrado

y de inmediato invertí mis US$6 dólares... IMAGINENSE QUE!!!!...
a los días después, empecé a recibir DINERO por correo!
Estaba feliz, como niño con juguete nuevo, y muy sorprendido!!!!
Y pensaba que esto se acabaría en pocos días más y me trate de
olvidar del tema, en todo caso ya había recuperado la inversión,
pero el dinero seguía llegando. En mi primera semana hice entre
US$20 y US$30 dólares. Para el final de la segunda semana había
hecho un total de US$1.000 (mil dólares)!!!!!! No lo PODÍA
CREER!; en la tercera semana $10.000 (diez mil) y todavía seguía
llegando más!; en mi cuarta semana tenía un total de $41.000.-
dólares y esto sigue llegando más rápidamente (en mi casa ,se la
pasan abriendo sobres y yo consiguiendo "NEWSGROUP". ESTO SE PUSO
SERIO.
Todo esto valió la pena, la inversión de US$6 dólares y 6
estampillas, dio sus frutos, y pensar que yo gastaba más de US$6
dólares semanales en sorteos y lotería, y no pasaba nada.

AHORA PERMÍTANME EXPLICARLES COMO FUNCIONA ESTO Y LO MAS
IMPORTANTE..... EL PORQUE FUNCIONA EXCELENTEMENTE
Usted asegúrese de imprimir este articulo AHORA, para sacar toda
la información a medida que lo solicite. El proceso es muy fácil y
consiste en 3 (tres) pasos sencillos:
PASO Nº.1.-
Obtenga 6 hojas de papel y escriba en cada una de
ellas "FAVOR DE INCLUIRME EN SU LISTA DE CORRESPONDENCIA O E-MAIL".
escribe también tu nombre, dirección y correo electrónico. Y pon
también en que POSICIÓN figuraba cada nombre de las personas cuando
enviaste tu DÓLAR
Ahora consiga 6 billetes de US$1 (un dólar) e introduzca cada dólar
en un sobre con la hoja, de manera de envolver el billete con la
hoja, con el fin de que el billete no se vea a través del sobre!!.
Es mejor que el papel sea de color oscuro para prevenir los robos de
correspondencia. Ahora usted debería tener 6 sobres sellados y en
ellos un papel con la frase mencionada, su nombre y dirección, y un
billete de US$1 (un dolar); lo que usted esta haciendo con esto es
crear un "servicio" y eso hace que esto sea ABSOLUTAMENTE LEGAL!!!
Enviar los 6 sobres a las siguientes direcciones:

#1.- Ronald Fuentes -
811 15th street, Union City , New Jersey
07087 USA

#2. - Carlos Ocampo -
222 Hawkins St.
Hollister CA, 95023 USA

#3 - Teodoro Ramos Silva
Oficina central de correo postal
Calles: Serdan y Rosales
Apartado postal # 01 - 318
Colonia centro.

Hermosillo Sonora, Mexico.
C.P. 83000

#4.- Sergio Arturo Tabarez Cataño -
Carrera 7B # 44AA - 49 Barrio Buenos Aires
MEDELLÍN Colombia

#5. - CARLOS MARIO ACEVEDO LASERNA
APARTADO AEREO 67899
MEDELLÍN, Antioquia
Colombia

#6.- MAURICIO BEDOYA PULGARIN
Calle 52A # 62-113
Bello - Antioquia - Colombia

PASO Nº 2.-
Ahora elimine el numero #1 de lista de arriba y mueva los otros nombres un numero para arriba (el #6 se convierte en el #5, y el # 5 se convierte en el #4, etc...) y agregue su NOMBRE Y SU DIRECCIÓN como el #6 de la lista. recuerde solo debe de borrar el numero uno de la lista.
Paso nº 3.-
Cambie todo lo que crea conveniente de este articulo, pero trate de mantenerlo lo más cercano posible al original. Ahora ponga su articulo en por lo menos 200 NEWSGROUP(existen más de 24.000.000 newsgroups), solo necesita 200, pero cuanto mas ponga , más dinero le llegará.
POR FAVOR LEA EL FINAL DE ESTA CARTA; LE VA A INTERESAR Y SE MOTIVARA AUN MAS.
Aquí van algunas indicaciones de cómo introducirse a los newsgroups:
COMO MANEJAR LOS "NEWSGROUPS":
Nº1.-
Usted no necesita redactar toda esta carta para hacer la suya propia. Solamente ponga su cursor al comienzo de esta carta, haga clic y lo deja presionado y bájelo hasta el final de la carta y larguelo.
Toda la carta deberá estar "sombreada". Entonces, apunte y haga clic en "edit" o "edición" arriba de su pantalla, aquí seleccione "copy" o "copiar". Esto hará que toda la carta quede en la memoria temporal de su computadora.
Nº2.-
Abra un archivo nuevo "notepad" o "word" y lleve el cursor arriba
de la pagina en blanco, Presione "edit" y del menú seleccione "paste" o "pegar". Ahora tendrá esta carta en su computadora y
podrá agregar su nombre en el lugar #6 de la lista siguiendo las instrucciones de más arriba.
Nº3.-

Grabe esta carta en su nuevo archivo del notepad como "txt
File" o "archivo de texto", y cada vez que quiera cambiar algo, lo
podra hacer sin problemas

PARA LOS QUE USAN INTERNET EXPLORER.
Nº4.-
Vaya a newsgroups y seleccione "post an article" o "escribir
nuevo mensaje/discusión"
Nº5.-
Cargue el articulo.
Nº6.-
Marque el contenido completo del txt file y copie usando
La misma técnica anterior .Regrese a newsgroup "TO NEWS" y usted
esta
creando y empastando esta carta dentro de su programa o "posting"
Nº7.-
Presione el botón "post"
PARA LOS QUE MANEJAN NETSCAPE.
Nº4.
Dentro del programa netscape, vaya a la ventana
titulada "Window" y seleccione "NetscapeNews". Entonces elija del
menú "Options", seleccione "Show all Newsgroups" En seguida
aparecerá una lista de todos los newsgroups de su server , haga clic
en cualquier nuewsgroup . De este newsgroup haga clic debajo de"TO
NEWS", el cual debería estar arriba, en el extremo izquierdo de la
pagina de newsgroup Esto le llevara a la caja de mensajes .-
Nº5.-
Llene este espacio . Este será el titulo que verán todos cuando
recorran por la lista de un grupo en particular.-
Nº6.-
Marque el contenido completo del txt file y copie usando
lamisca técnica anterior .Regrese a newsgroup "TO NEWS" y usted esta
creando y empastando esta carta dentro de su programa o "posting" .
Nº7.-
Presione "send" , que esta en la parte superior izquierda y
usted ha finalizado con su primer newsgroup.
.....CONGRATULACIONES!!!!!!!!!!!!!!!!!!!!!!!
ES TODO!!! Todo lo que tiene que hacer es meterse en diferentes
Newsgroups (grupos) y empastarlos; cuando ya tenga práctica , solo
le tomará unos 30 segundos por cada newsgroup
RECUERDE: MIENTRAS MAS NEWSGROUPS CONSIGA, MAS RESPUESTAS Y DINERO
RECIBIRÁ!!!!, PERO DEBE DE ENTRAR EN POR LO MENOS... 200
NEWSGROUPS...
YA ESTA!!!!!... Usted estará recibiendo dinero de todo el mundo, de
lugares que ni conoce y en unos pocos días!!!. Eventualmente querrá
rentar un P.O.BOX. por la cantidad de sobres que irá recibiendo!!!
(((ASEGURESE DE QUE TODAS LAS DIRECCIONES ESTÉN CORRECTAS)))
CON EL CODIGO POSTAL CORRECTO POR FAVOR.!!!!

Ahora el PORQUE de todo esto:
De 200 enviados, digamos que recibo solo 5 repuestas (bajísimo ejemplo). Entonces hice $5 Dólares con mi nombre en la posición #6,de esta carta. Ahora cada una de las personas que me enviaron los $1 dólares, también hacen un numero de 200 newsgroup de la lista y solo
responden 5 personas a cada uno de los 5 originales, esto hace $25 mas que yo recibo, ahora estas 25 personas ponen un mínimo de 200 newsgroups con mi nombre en el #4 lugar, y solo se reciben 5 repuestas de cada uno. Estaría haciendo otros $125 adicionales, ahora estas 125 personas ponen un mínimo de 200 grupos con mi nombre en el #3 lugar y solo recibe 5 respuestas cada una ,yo recibo un adicional de $625!!!!!!!!!, ok, Aquí esta la parte mas divertida, cada una de estas 625 personas ponen sus cartas con otros 200 grupos con mi nombre en el #2 lugar y cada una recibe solo 5 respuestas .Esto hace que yo reciba $3.125 dolares adicionales!!!!!!!!!!
Estas 3.125 personas enviaran este mensaje a un mínimo de 200 grupos, con mi nombre en el #1 lugar, y solo 5 personas responden de los 200 grupos ,esto hace que yo reciba $15.625 dólares!!!!!!!!!!!!!!!
De una inversión de $6 .- dólares , no creen que es FABULOSO!!!!!!!!!!!!!????????????. Y como dije antes, que solo 5 personas respondan de 200 grupos,(el promedio real es de 20 a 30 personas)!!!!!!!!!!!!!! SI QUIEREN SAQUEN CÁLCULOS!!!!!!!!!
SI SOLO 15 PERSONAS RESPONDEN ..... ESTO HACE:
En la #6...=$15,00.-
En la #5....=$225,00.-
En la #4....=$3.375,00.-
En la #3.....=$50.625,00-
En la #2.....=$759.375,00.-
((((Ahora viene lo bueno, no se asusten.-
En la posición #1..... (((((($11.390.625,00))))) ... si, ONCE MILLONES DE DOLARES!!!!!!!!!!!!!!!!
Una vez que su nombre ya no este en la lista , saque el último anuncio del newsroup y envíe otros $6 dólares a los nombres en esa lista, poniendo su nombre en el lugar #6 y repetir todo el proceso, y empezar a ponerlos en los newsgroups otra vez, lo que debe recordar que miles de personas como usted y como yo en todo el mundo, se conectan a internet y leerán estos artículos, así que creo que nadie tendrá problemas para invertir $6 dolares, y verás si esto realmente funciona. Algunas personas llegan a pensar...." y si nadie me responde"..... QUÉ, cual es la chance de que esto pase, si hay miles y miles de personas honestas (que, como nosotros) buscan una manera de tener independencia financiera y pagar cuentas!!!!!!, y están dispuestas a tratar, pues " NO HAY PEOR LUCHA QUE, LA QUE NO SE HACE!", se estima que hay 20.000 a 50.000 nuevos usuarios TODOS LOS DIAS, (en todo el mundo). RECUERDE EN HACERLO DE MANERA, HONESTA, LIMPIA Y CORRECTAMENTE y funcionará con toda seguridad!!!
***Dicho de paso: si usted defrauda a las personas, poniendo

mensajes con su nombre y no envía ningún dinero a los demás en esas lista, usted recibirá casi NADA!!!!!
He conversado con personas que conocieron a personas que hicieron eso y solo llegaron a recolectar $150 y eso después de 7 semanas...
RECUERDEN , HÁGANLO EN FORMA HONESTA , LIMPIA Y CORRECTAMENTE, de manera de que ganen dinero y no malgasten el tiempo, si lo hacen bien, en una semana les aseguro que recibirán dinero.
DEBEN SEGUIR LAS REGLAS DEL NEGOCIO, O SINO ESTE SE VERÁ MUY AFECTADO POR PERSONAS INESCRUPULOSAS.
BENDICIONES PARA TODOS Y
SUERTE!!!!!

I'm not yet blind but I, like my father, am going deaf.
I couldn't hear a CW signal without a BFO if my life
depended upon it. I can't hear most of the CW signals
even with a BFO.

Hi Pete; I just recently acquired an essentially mint Icom R70 off of Ebay. It has the 500 kHz CW narrow filter included and came with the manual and original box. After using this radio for a couple of weeks I'm very impressed short of the weird ergonomics and the end of band tuning anomalies. The sensitivity and selectivity are superb and the BP shift and IF notch are among the best I've used. The audio is a bit on the shallow side but I replaced a few of the electrolytic coupling caps with film caps and the difference was very noticeable. I also removed the LW/MW input attenuator and disabled the input rf amp defeat for MW/LW. It can now be switched on and off from the front panel switch. What is your experience with this radio and are there any other improvement modifications that you know of?

Comments on this receiver from others are welcome.

That is the impression I am getting. Sounds like the digital
radio people have pushed effective source bandwidth
beyond what is practical for the communications channel
and the audience.
But even if they chose a less ambitious compromise there are
aspects of digital that SWLs aren't going to be happy with.
Analog degrades somewhat gracefully with declining SNR.
Digital has a cliff effect. With digital you can get perfect
reception of the designed quality over a wide range of SNR
but if the SNR dips below a certain threshold you get
nasty noise. With analog you might be able to make out
the call letters of some exotic distant station with a 0 dB
SNR but with digital you'll get just noise unless you have
a significantly higher SNR. Check out the Shannon-Hartley
theorem. http://en.wikipedia.org/wiki/Shannon_capacity

So are you not shaking your head side to side anymore?
Are you no longer saying "No, no way, nope." (to
my "Digital is often superior.")?

David - AM "HD" {IBOC} Digital Quality within the 'local'
Metro Broadcast Area may in-fact sound better then the
old Analog AM Radio Signal -or- it may not.
- - - Deteriorating AM Analog Radio Signals will most
likely motivate many AM Radio Listeners to go out and
BUY a New "HD" AM/FM Radio. And after that everything
will be Simply Wonderful ! :o)

But - FM "HD" {IBOC} Digital Quality Makes Sense {Cent$} !
for the Broadcasting Industry; from a Technical Point-of-View;
and most of all to the FM Radio Listening "Public".

1 - FM "HD" {IBOC} Radio - Yes !

2 - AM "HD" {IBOC} Radio - Just a May Be ?

and that's the way i see it ~ RHF

Steve - That is true about Listening to LF and VLF Signals.
The Noise and The Signal -or- Is The Noise... The Signal ?

Someone may be interested in this New "E-Probe" Design
-by- W1VLF for it's application as an AM {Medium Wave}
Active Antenna.

Now you are sounding like a goofball.

If you comprehended what I wrote you would know the answer but you are
obviously not interested. Why am I not surprised.

The guy that is in love with the new plastic smell of radios finally got
bored and left the news group and apparently you going to be the
"Digital is superior" Troll replacement.

Some people have thousands of dollars invested in their AM/FM/Shortwave Radios.I suppose IBOC messes up the listening quality of the AM analog radio stations they want to listen to on those expensive radios.

Here's a list of fine quotes for you:
http://www.informationclearinghouse.info/article4882.htm

"See, in my line of work you got to keep repeating things over and over and over again for the truth to sink in, to kind of catapult the propaganda."

George W Bush, 5/24/05

http://www.wsws.org/articles/2004/jan2004/wmds-j10.shtml

Gotta love this from a Colin Powell aide:
http://www.cnn.com/2005/WORLD/meast/08/19/powell.un/

And from Powell himself:

"But two years earlier, Powell said just the opposite. The occasion was a press conference on 24 February 2001 during Powell's visit to Cairo, Egypt. Answering a question about the US-led sanctions against Iraq, the Secretary of State said:

We had a good discussion, the Foreign Minister and I and the President and I, had a good discussion about the nature of the sanctions -- the fact that the sanctions exist -- not for the purpose of hurting the Iraqi people, but for the purpose of keeping in check Saddam Hussein's ambitions toward developing weapons of mass destruction. We should constantly be reviewing our policies, constantly be looking at those sanctions to make sure that they are directed toward that purpose. That purpose is every bit as important now as it was ten years ago when we began it. And frankly they have worked. He has not developed any significant capability with respect to weapons of mass destruction. He is unable to project conventional power against his neighbors. So in effect, our policies have strengthened the security of the neighbors of Iraq..."

The lies never cease from King George and his crew. I know the truth is indigestible to you. Hell, you probably don't have the stomach, let alone the balls, to admit that he fooled alot of you.

The symbol rate is known as the baud rate, which of course is not the same as bits per second unless your symbol has one bit per baud. [Yes, bits and baud are often used interchangeably, but that does make it right.] So it makes no sense to talk about a 7Khz "stream". You need to have the same units, i.e. bps.

If you convert your weight from lbs to stones, does the smaller number mean you lost weight?

Couple problems with your answer. Let's take them one at a time:

> You might be able to get it higher with more inductor adjustments, I don't
> know the circuit. Maybe have to add some capacitance to the tank.

To raise the frequency of resonance, you would decrease either inductance or
capacitance, or both. I.E. you would remove turns from a coil, or use a
smaller series or parallel capacitor. I have successfully modified a GE
Superadio II to receive as high as 155MHz by removing a turn from each of
the RF, Antenna and Oscillator coils and realigning for proper tracking.

> Here's your real problem though. Broadcast FM is wideband. FM
> communications 135-175 MHz are narrow band. That means more modifying is
> needed to the receiver in order to hear the narrow band FM better.

True, that broadcast FM is wideband (150KHz total, 75KHz deviation), but most of the frequencies the OP wishes to listen to are in the aircraft comms band, and are not FM at all, but fairly broad band AM (IIRC, 12KHz). These can be heard by slope detection on an FM radio, and the discriminator (or other detector circuit) can be detuned a bit to allow for reception with the majority of the radio's circuits tuned to the center frequency of the carrier. The detector circuit could be modified to detect only AM (and therefor slope detect FM) fairly easily, actually by removing some components and wiring around them, but overall this is not absolutely necessary.

From: Andreas Eibach <aeibach@mail.com>
Message-ID: <e9pqalutj00$1@news.t-online.com>
Source record: 84521

Hi, I'm considering to buy such thing, but if so, i'd prefer a 76-108
version if this is possible.
Yet it seems even in the US shops - where I clearly remember that the
SONY AIR-8 was also sold with FM freq range 76..108 back in 1986 - the
only version available is the 87.5-108 version.

Please no "why do you ..." questions, if possible. I'd just like to know
whether it's available or not - thank you.

> necessary.

I believe you have the slope detection application backwards, i.e. it
allows FM to be demodulated on a radio set up for AM demod.

A slope detection FM demod puts the FM signal through a filter that is
not centered properly, i.e. the signal's frequencies are on the slope
of the filter, not the passband. Then as the frequency changes, the
attenuation of the signal also changes, which effectively has turned FM
into AM. Then you rectify and low pass filter, as you would do with an
AM signal.

Note also that the FM demodulator rejects AM by the use of a limiter.
Thus FM radios reject AM quiet well, but the opposite is not true, i.e.
FM can be demodulated by an AM demodulator that is tuned off center a
bit. High end FM radios will spec their AM rejection:
http://www.fanfare.com/fta100-specifications.html
The AM rejection in this application relates to the ability to reject
atmospheric effects on the FM signal strength, but it would reject
broadcast AM too if somehow the AM was on an FM broadcast frequency.

Thank you very much for your response and good will.
Actually I need it for a surveillance bug working on about 120MHz, not varicap controlled - so it may be used in AM or wide FM as well (not narrow FM).
So, almost any receiver is ok - with my scanner I receive it with both modulation modes equally.
I cannot buy an airband receiver - as in my primitive country :(it's not allowed without a special licence. I have a simple one stucked at the customs for 3 weeks - no way to release it so far.
Thank you again,
Ridgh

You are correct, but 'slope' detection also works to detect an AM signal on
a discriminator or ratio detector. By tuning slightly off frequency (or, by

tuning the detector circuit slightly off frequency from the center carrier.. i.e. detection on the slope of the modulated signal) you can receive AM modulated signals. As stated, I have successfully converted an SRII to receive up to 155 MHz, including the 108-132~ AM aircraft band. Perhaps if the signal from these AM aircraft stations (and the aircraft themselves) were of a higher amplitude, then the limiter would affect them.. i.e. if you were close to your local airport's control tower. Even a stock standard AM/FM radio (not one with an RF amp, those have too much image rejection) will receive aircraft comms between 108 and 129.4 MHz due to various mixing products if the signal is closeby, and this with no modification at all.

AM dxers on the xtreme ??

When my neighbours telly is on, I can't dig further into the noise .. ;-)

When there is noise on your radio, does your body feel the electricity
around ??

what would be extreme ?? sit on an island, away from electricity and
even digital camera's too (put your camera close to your receiver and
listen to the noise ..)

The version for Japan should be 76-108 ???

I have owned two sony's made for the Japanese market ...

We had one member here, some years ago, who took his Drake SW-2 out
of town, found a stretch of Interstate highway with a steel guard rail,
and connected to that for what became an approximation of a Beverage
that was, in one case, about 12 miles long. He reported some
interesting results

I bet the guard rail didn't remain very straight across an expanse of
roughly twelve miles (though you could find relatively straight guard
rails of that length in some places).

I've pulled the tuner out of cheap ghetto blasters and performed this
mod simply by pulling apart the turns of the various coils in the
front-end and retweaking for maximum signal. It is much easier if you
have a sig generator which lets you generate the proper frequencies, or
an airport nearby with a continuous ATIS broadcast.

Minor curves or twists in beverage antennas don't seem to make them inoperative. In many DXpeditions where they are laid out it is necessary to avoid small obstructions, whether they be a garden, a patch of trees, a rock formation, etc. and they seem to work just great. My last experience was aiming at central sub-Saharan Africa from the Gu&#65533;nica, PR beach where I put

a slightly curved beverage across a kind of rocky point, aimed east.

I'm sure you're right. One of the reasons I qualified "an
approximation of a Beverage." I believe this was in Colorado and Wyoming.

Although there's a straight stretch of 55 between St Louis and Cape
Girardeau that's nearly 20 miles with only vertical displacement for a
few hills.

3372. Shortwave Transmitter Co-ordinates

Newsgroup: rec.radio.shortwave
Date: 2006-07-21 16:45:43 UTC
From: shortwavesites@gmail.com
Message-ID: <1153500343.322231.184510@h48g2000cwc.googlegroups.com>
Source record: 84459

I am researching transmitter site information for domestic &
international shortwave broadcasters & I was wondering if anyone has
access & knowledge of latitude/longitude co-ordinates of TXer sites
outside of the USA & Australia? The co-ordinates should be precise
enough to be detailed down to Degrees, Minutes & SECONDS.

Also any information on the commencement date & last day of broadcast
of broadcasts from SW radio txer sites of broadcasters would be very
much appreciated.

I would be very gratefull for your assistance.

Regards

Ian

You don't think the greatest change to DX reception in about 80 years is a
valid subject?

Don't know whether you've seen this site or not:

http://www.tdp.info/

The WRTH used to list the co-ordinates for some sites, but I'm uncertain of the accuracy.

From: dxAce <dxAce@milestones.com>
Message-ID: <44C10F1F.33EF8DA7@milestones.com>
Source record: 84467

[Aboriginal Resource and Development Services]

** AUSTRALIA. Re 6-105, UNIDENTIFIED: ARDS is indeed back on SW 5050, as first reported July 17 by Alex Vranes in WV. On the ARDS website it is still hard to find anything about SW, but there is a streamer giving all their AM & FM frequencies, and finally at the end::: ``Across north-east Arnhem Land on HF Radio 5050 kHz``. See http://www.ards.com.au/radio.htm or their other pages.

Now to DX ARDS, it`s again a matter of finding a time when it can propagate and when there is little or no co-channel QRM, and Alex already accomplished that, at 0910-0950 (Glenn Hauser, DX LISTENING DIGEST)

ARDS transmits out of Humpty Doo, near Darwin, NT.

Not when the interstate is elevate above ground level. There are some above
average terrain runs that have guard rail in a straight line going on
forever.

3382. Voice of Armenia to leave shortwave

I must have missed this going through my regular updates, but Tom DeVesto, of Tivoli Audio announced last month that Tivoli is in development of and will soon release it's first HD radio in Fall of 2006 featuring the new chipsets and specifications from iBiquity. For those interested in HD AM, (and those not particularly so) this would be the 2.0 spec that David Gleason has been making reference to.

That DeVesto is on board I find encouraging. It will be interesting to see how AM HD has been improved since I heard it's first incarnation.

It will also be interesting to see what kind of reception range HD will have from my home base, given that on a good day, my local AM's are mostly covered up with the HD rash from stations so equipped.

Getting back to more SW-centric chatter....has there been a DRM receiver released that is not linked to a PC? I seem to recall some noise about a stand alone DRM receiver, but can't find any references to it now.

If there is such a stand alone DRM receiver, has it been released for sale in the US? If not, where might one be acquired?

And how widespread is DRM deployment?

I would disagree, I know a number of amateur operators who would like
to listen to it.

Sorry about all the replies, next time I' ll
clean my glasses first.
I had an R 70, sorry I let it go. I'll take its tuning strangeness just
to avoid
the memory battery over an R71A. I think most of the "71" mods apply.

Iraq: Turkey Threatens Military Incursion

Turkey has said it was taking steps this week to prepare for a cross-border incursion into northern Iraq to hunt down Kurdistan Workers Party (PKK) fighters holed up in the Qandil Mountain range.

You can go to the HFCC (High Frequency Co-ordination Conference) and
down load the latest information (A06) for short wave. The zipped
document is several files and the one you are interested in is Site.txt

It has degrees, minutes, no seconds in the listing.

Like you say, it depends on whether you as add capacitance in series or
parallel.

You'll have more to bargain with then than just their lives. It's best to bomb sand niggers on their own turf. Don't let them cross the border and enter your country. Bill Clinton let some in here and we had 911 happen. You need to take care of Iran and Syria for good this time, because their long range plans have always been to get rid of you. Do whatever it takes. American supports you.

The prototype units I saw took about 1 Amp or a little over that at some
DC voltage probably in the 12 to 15 Volt range so I'll leave it to you
to calculate the RMS watts it uses.

If you go to the DRM web site I'm sure they will have some links to at
least the prototype radios I saw before. Maybe there are some in actual
production by now by Mayah communications and Coding technologies.

<http://www.drm.org/>

> And how widespread is DRM deployment?

Not very much going on apparently.

You have only demonstrated that you are stuck on stupid in this post
but hey, no biggie.

I haven't listened for Argentina in years. Do they have an english
broadcast people in NA can hear? Might be interesting listening if
things heat up there like they seem to be else where.

Anybody else notice leftists and nut case terrorists world wide seem to
be causing problems? Either it's the heat or it's deliberate
coordination.

3428. Iran Paid N.Korea to Launch Missles

Newsgroup: rec.radio.shortwave
Date: 2006-07-21 23:38:07 UTC
From: ~ <read@it.net>
Message-ID: <12c2pjuhul9gd73@corp.supernews.com>
Source record: 84566

Terror's Nuclear Nexus

According to reports out of North Korea, not only were Iranian observers - primarily scientists and engineers - present at the multiple missile launches that the Dear Leader flung in the general direction of Japan during U.S. Independence Day celebrations, but the Iranians may even have paid for the tests. It has long been known and reported in this column that the Iranians have worked for years with North Korean counterparts to improve the Nodong and Taepodong missiles (that Iran calls the Shehab class) and to co-develop terminal guidance technology and other aspects of warhead research. The rocket body itself is one of several critical parts of an effective missile, the warhead, payload, and guidance system being others.

Iran has threatened use of these weapons complete with nuclear warhead to exterminate Israel. Those who take the words of Mahmoud Ahmadinejad seriously as he speaks of wiping Israel from the map recognize that every delay, every bit of procrastination, every strategy that relies on the unfit like the EU and UN to do the heavy lifting, are simply opportunities for Iran. They need time to work with their North Korean pals to finalize warhead, nuclear payload, and guidance technologies. Before they can pull the trigger they need to be assured that the attack will work. Hence Iranian sponsorship of the North Korean missile shots.
...
Historically these aggressors use surrogates to test their weaponry prior to launching an irreversible attack against their enemies. Hitler used first the Baltic fighting then the Spanish Civil War as made-to-order settings for experimenting with tactics and weapons before he burst blitzkrieg upon a slumbering world. Similarly Ahmadinejad has reportedly paid for rocket testing in North Korea, experimenting with much more than simply firing off long-range missiles. Key to the Korean test and confusing to many observers are the number of rockets shot off. Why, analysts question, did Kim have to shoot so many? Wasnt the real test about the long-range Taepodong II, capable of reaching America?

It could well be that the Taepodong II test was a smokescreen. Was the entire affair a sleight of hand intended to deceive American and Japanese observers naturally preoccupied with national defenses? It is an entirely plausible hypothesis. The real test was to see how swiftly these missiles could be deployed and simultaneously mass-launched. Suppose the simulation was that each test missile was fired by a military unit that in wartime would be armed with several missiles. Therefore each separate North Korean launch actually represented a score or more of missiles. Then Iranian observers would be able to assess how well the missiles perform in the tactical combat situation they anticipate. In war perhaps hundreds of these rockets could be flying at unsuspecting targets, maybe with VX nerve gas or

radiological warheads, achieving surprise and inflicting massive casualties
on the enemy. This, according to some observers, is exactly the kind of live
simulation for which the Iranians paid large sums to the North Koreans.

I'm not Pete, but I have owned an R-70 for a long time (20 years?). My take on it is pretty much what you seem to think. The AM detector leaves something to be desired. It sounds a bit distorted.

I know that Sherwood sells an R-70 synchronous detector. I haven't got $400 to throw at this, to tell whether it's worth the money. I will say I've yet to hear anything negative about their products.

I have the CW filter, and the FM board. Sideband, CW, RTTY, and FM all work quite well. The Notch and PBT are very good.

I have some microcontroller chips and I'm thinking of writing some software to handle the four bit strobed interface in the back of the unit. I'm not sure how complex it is, but I feel I'm about to find out.

South Korea for another.. actually, I think you will find that MOST
countries don't allow any VHF reception other than broadcast unless you are
a ham operator or military affiliated (or a user of the individual
services).

You should try reading what Claude Shannon had to say on the subject.

How good your 7khz channel sounds depends upon how good the signal to
noise ratio is. In an analog system, reduced signal to noise ratio
rarely conveys additional information.
In a digital system, you can arrange the carrier phase relationships
to carry data. The ear however is pretty much insensitive to the phase
relationship. One result is that a 9,600 bit per second vocoder can
reproduce speech quite well, in fact that is the data payload on a GSM
mobile phone.

If our 7khz channel has a 40db S/N ratio, the channel capacity is
actually far higher than 7000 bits per second, with a 40db S/N ratio,
the Shannon theorem says you can get just shy of 100,000 bits per
second. 100,000 bps isn't quite standard FM quality, but it beats the
hell our of anything that you get out of the bandwidth with analog. In
the real world, we cannot quite get to the Shannon theorem limits, but
we can get pretty close, and do quite regularly. The Deep space
network for communicating with planetary probes operates within a tiny
fraction of the Shannon limits....

In an AM analog envirorment, you are bandwidth limited to 0-3.5Khz by
a 7Khz channel, you can get to 0-7Khz if you SSB-SC....

That's weird. I remember seeing an ad in a German magazine (from Germany) for a multi-band portable that covered Air, police and other PS bands. It was one of those walkie-talkie looking things with an analog dial.

Source record: 84576

I think the original was an attempt to point out that there are limits
to lossless compression, however the Nyquist theorem makes clear that
the example below is not useful.

What he is talking about is that if you sample a 256Hz sine wave at
25.6Khz, you will only get 100 data points on the wave form.
The number of points however is not really of interest. You just need
two per wave form to reconstruct a sine wave. I.E. you can reconstruct
at 256hz sine wave by sampling at only 512 Hz. You just need to make
sure there is a low pass filter on the output on the ADC with a cutoff
well below the sampling rate.

The Fourier Theorem allows you to reconstruct an arbitrary wave form
as the sum of a series of sine wave of differing frequencies and
amplitudes.
For exampe a square wave is
sin(wt)+1/3sin(3wt)+1/5sin(5wt)+1/7sin(7wt) ......

The highest frequency component you can send is half the sampling
rate. So if you want to encode a 256Hz square wave with a 256Khz
sample rate, you will get a pretty good representation since it will
incorporate all of the components up to 499th harmonic, which will
have .2% of the energy of the total sine wave.

As a researcher Claude Shannon developed information theory but the proposed systems DRM and IBOC don't live up to their claims.

> How good your 7khz channel sounds depends upon how good the signal to
> noise ratio is. In an analog system, reduced signal to noise ratio
> rarely conveys additional information.

Let's get real. In the analog world signal to noise is what you want to hear as opposed to what you don't want to hear. What this means in real world terms is if I can turn up the volume as loud as I care to on a radio and only hear the program material I'm golden. If I hear a little noise like static then I'n not quite as good. If I'm hearing a lot of static or hiss but I can still make it out it sucks but if I chose to stick with it I can get most or all the information.

With digital if the signal to noise goes from infinite large to just above the minimum then I get just the program information and zero noise excepting the circuit noise at and following conversion. Sounds pretty good so far right. Then we get close to the SNR edge and bad things start to happen. Whatever your level of artifact tolerance level is it is about to be exceeded. Distortion goes through the roof and you will start missing some of the program material because it will be garbled. There will be no background noise but you will not be able to understand what is being said anyway. Now we move a little closer to the edge and besides the program content being garbled dropouts occur. The program starts and stops in a very jarring way in between all the garbage being generated. We then have things deteriorate a little further and then silence. I got the station tuned in but nothing. Tap the radio on the side, then hit it a little harder, finally drop kick it the result is the same, nothing.

This is better? It has some good points and bad points. I don't think it's better just different. It might be better in some conditions such as well above the SNR threshold where you hear essentially no noise but for that to be better the program material has to be faithfully reproduced and I don't like the sound of DRM. I have not heard the digital part of IBOC yet so the jury is out on that.

I'll tell you what I find interesting and that is proposed digital schemes that are supposed to sound better for theoretical reasons but when I hear a sample of what is actually made hardware (opposed to vaporware) it doesn't. However, the expected drawbacks are there.

I believe these digital systems are better when I hear it and I'll believe they only occupy the part of the spectrum they are supposed to use when I see it on a spectrum analyzer.

I'm not falling for the hype. When ever you push the performance of any real world object you spend more money at least in the beginning. I just don't believe that is going to happen with DRM, IBOC or any other acronym describing the next new system that is supposed to be a "better" system until I hear it and see it. There is theory and then there is applied engineering. They are two different things.

Source record: 84579

Here on the East Coast I'm getting unusually good reception of Radio Belarus tonight on 7210 khz. Now hearing news/news analysis.

Steve

Yup, that's the minimum theoretical sample frequency and just follow
that with an low pass amplifier and you have a sine wave and that's how
CD players are made. Oh, wait a minute, that's wrong! What do I see, two
ADC's interlaced, over sampling, algorithmic corrections, well, well,
well, what do I make of all that stuff?

So the way I see it the wrong questions are being asked. Why is all this nifty analog to digital and back again technology designed to work with local media and defined hardware circuits and its attendant QOS supposed to be a good thing on signals that refract off the varying ionosphere and the earth over vast distances?

I picked up one of these and have been playing with it for a couple of weeks. I figured I'd better act fast to enjoy MW before the profiteers destroy it.

The Quantum is a very nice tool. Certainly a big step up from a Select-A-Tenna, which is what I'd been using. It takes some time, patience and practice to use it to full effect, and I probably still have a way to go, but it's a quality product and I'd recommend it to anyone who's interested in MW DXing.

There are plenty of detailed reviews out there, so I won't belabor the point. Just wanted to cast a "vote" in favor of the Quantum.

If you had the ad today, you could probably find the disclaimer "For
Export Only" somewhere on it.

You can buy them all over (at least during the 80's when I was last
there); but they all had that wording somewhere on the ad or packaging.

"Nur fur Export"

I got it new, and it's the regular QX Loop, not the QX Pro, which
provides LW coverage. It wouldn't have made sense for me to get the QX
Pro. My environment is too noisy to do anything serious with LW.

I hate to be argumentative, but I just don't agree with you here.
Check out this link. Just how are you slope detecting with your ratio
detector?

<http://www.radio-electronics.com/info/receivers/fm_demod/fm_demodulation.php>

Slope detection
The very simplest form of FM demodulation is known as slope detection
or demodulation. It simply uses a tuned circuit that is tuned to a
frequency slightly offset from the carrier of the signal. As the
frequency of the signal varies up and down in frequency according to
its modulation, so the signal moves up and down the slope of the tuned
circuit. This causes the amplitude of the signal to vary in line with
the frequency variations. In fact at this point the signal has both
frequency and amplitude variations. The final stage in the process is
to demodulate the amplitude modulation and this can be achieved using a
simple diode circuit. One of the most obvious disadvantages of this
simple approach is the fact that both amplitude and frequency
variations in the incoming signal appear at the output. However the
amplitude variations can be removed by placing a limiter before the
detector. Additionally the circuit is not particularly efficient as it
operates down the slope of the tuned circuit. It is also unlikely to be
particularly linear, especially if it is operated close to the resonant
point to minimise the signal loss.

Ratio and Foster-Seeley detectors
When circuits employing discrete components were more widely sued, the
Ratio and Foster-Seeley detectors were widely used. Of these the ratio
detector was the most popular as it offers a better level of amplitude
modulation rejection of amplitude modulation. This enables it to
provide a greater level of noise immunity as most noise is amplitude
noise, and it also enables the circuit to operate satisfactorily with
lower levels of limiting in the preceding IF stages of the receiver.

3457. New version of Shortwave Log released

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 04:39:35 UTC
From: Robert Sillett <noemail@thisdomain.com>
Message-ID: <b_hwg.2673$tw5.1267@tornado.tampabay.rr.com>
Source record: 84596

A new version of Shortwave Log has been released. Shortwave Log is a suite of programs providing logging, propagation, radio control, web control, chat, and audio recording. It can be downloaded from http://www.shortwavelog.com

New in this version are improvements to the Chat program and Voice Command & Control for the Radio Control Server program. You can now use your voice (and a microphone) to provide hands-free control of any of the 24 supported receivers.

Yes it is, but that applies to the Sony.
My question is what about the emergency radio.

3460. Re: Eton/Lextronix emergency radio FRxxx - possible to get in 76 mhz version?

I would look into whether Eton makes a version for the Japanese market.
Should be able to find a contact link on their website.

3464. Syrian fighter pilots sitting in cockpits - Iran in Control

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 12:36:53 UTC
From: David Edtardo <read@book.org>
Message-ID: <12c4785qcc4k1b1@corp.supernews.com>
Source record: 84750

Syria placed its army on war preparedness, pointed Scuds at Israel from Thursday, July 20, the day Tehran took control of Lebanon War

Our sources add Syrian fighter pilots are sitting in their cockpits.

These orders went out from Syrian president Bashar Assad July 20 when Iran's Revolutionary Guards commander Brig.-Gen Yahya Rahim Safavi assumed command of the Lebanon war from Hizballah leader Hassan Nasrallah. Tehran's direct military intervention in the conflict was accompanied by an Iranian weapons airlift which began landing Wednesday, July 19, at the Abu Ad Duhur military airfield north of Homs. The deliveries include large quantities of new missiles, including the long-range Zelzal and Fajr 3 and Fajr 5 missiles, Katyusha rockets, anti-tank and anti-air missiles sent out from RG HQ in Bandar Abbas on the Persian Gulf.

Assad acted on the assumption that Israel, whose air force and ground forces are already hammering the cross-border supply routes north of the Litani River to block the passage of Iranian hardware to Hizballah, will soon decide to go for Iranian military operations in Damascus and Abu Ad Duhur.

Gen. Safavi has set up two forward command posts which coordinate war operations with Hizballah chief of staff Ibrahim Akil.

One center is working out of a cellar of the Iranian embassy in Beirut to regulate Hizballah rocket fire against Israel and direct the groups of 3 or 4 RG officers taking part in every Hizballah face-to-face engagement with Israeli ground troops in the south.

The second, housed in the basement of the Iranian embassy in Damascus, is in charge of communications, intelligence and getting hardware into Lebanon.

The deliveries were made to the Abu Ad Duhur airfield because it belongs to the joint Iranian-Syrian Scud missile factory which employs a large number of Iranian engineers and technicians.

DEBKAfile's military sources report that some of the Iranian arms have Hizballah in Lebanon notwithstanding intense Israeli cutoff operations and their impact will probably be palpable in the coming days.

I bought a Creative Zen Nano Plus 1 Meg MP3 player last month. It was so cool that my wife got one the next day. At this time, I have 250 of my favotite songs and a week's worth of Rush Limbaugh, and I still have memory left over. Plus it even has an internal FM radio that you can listen to or record from.

It sounds really great through headphones, and I love listening to it. But I realize that constant listening through headphones is not good for my hearing, especially since my job depends on me being able to hear well. So I'm looking for an FM transmitter that I can connect to the it that would allow me to listen to it through regular radio speakers at a much less damaging volume. There's a whole bunch of FM transmitters that are designed for this purpose. I tried a cheap one from Wal-Mart that really didn't impress me. I'm tempted to buy the CCrane FM Transmitter. It gets excellent ratings, but it costs $70, and I can't really afford that unless it's just miles beyond its competition.

Does anyone have any experience with any of these transmitters?

Appreciate the comments Jake! As far as the AM detector goes (D74), I was able to improve the distortion issues considerably by using a 1 Meg resistor connected from the -10V rail to the diode's cathode. The AM clarity was noticeably improved as was the low signal S/N ratio. Terry Fugate from the Yahoo Kenwood R-2000 group did numerous experiments with different detector diodes and biasing them in his R-2000 and achieved some respectable results. It was just pure luck that the R70 had a negative rail for direct biasing with just the addition of a resistor.

3472. The Nazi-Arab Alliance

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 14:29:50 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12c4ds0547mm26f@corp.supernews.com>
Source record: 84759

The Nazi-Arab Alliance

Like other Holocaust-deniers, those of the Islamic world aren't just flat-Earth cranks, but virulent anti-Semites. Except for a handful of European skinheads and Aryan Nation types holed up in Idaho, The Protocols of The Learned Elders of Zion is still taken seriously only among Muslims — where it's the Harry Potter of Middle East publishing.

This Czarist forgery (which purports to expose a Jewish conspiracy to control humanity) is ubiquitous in jihad land. Saudi Arabia's late King Faisal often gave copies to foreign visitors. Yasser Arafat was a fan. Arab periodicals quote it religiously, to demonstrate the perfidy of the Jews. In 2002, Egyptian television broadcast a 41-episode, dramatized version of The Protocols, entitled. "Horseman Without A Horse."

The roots of Islamic anti-Semitism run deep. Mohammed never forgave the Jews for rejecting his message. After he came to power, Jewish tribes in the Arabian peninsula were converted by the sword, or massacred. The Koran is rife with the Prophet's disdain for Jews. (He called them descendants of apes and pigs.) Alongside this are calls to fight the Jews, who are indicted as the enemies of Allah.

Over the centuries, this theological anti-Semitism has evolved into a conviction that Jews are the repositories of evil in the world and Islam's principal enemies.

It's not surprising that the resurgence of widespread anti-Semitism on the European continent, after years of quiescence, parallels the influx of Middle East Muslims.

When Pope John Paul II paid a state visit to Syrian President Bashar Al-Assad in 2001, he must have thought he'd stepped off the plane and into a Nuremberg rally. In welcoming the pontiff, Assad proclaimed, "They [the Jews] try to kill all the principles of divine faiths with the same mentality of betraying Jesus Christ and torturing Him, and in the same way that they tried to commit treachery against the Prophet Mohammed."

One who took the Prophet's call to its logical conclusion was Hajj Amin al-Husseini, grand mufti of Jerusalem before World War II. The mufti spent the war years in Berlin as an honored guest of Adolf Hitler.

Working from his office in the capital of the Third Reich, al-Husseini devoted himself to a Nazi victory, recruiting spies to serve in the Middle East and raising a Bosnian Muslim division of the Waffen SS. Described at Nuremberg as one of Eichmann's best friends, the mufti even visited Auschwitz and urged those who ran the gas chambers to "work more

diligently."

In a radio broadcast from Berlin on November 2, 1943, Hitler's partner in genocide condemned the Jews in language that echoed Mein Kampf : "The overwhelming egotism which lies in the character of Jews, their unworthy belief that they are God's chosen nation and their assertion that all was created for them and that other people are animals" is the reason "[t]hey cannot mix with any other nation but live as parasites among the nations, suck out their blood, embezzle their property, corrupt their morals The divine anger and curse that the Holy Koran mentions with reference to the Jews is because of this unique character of the Jews."

After the war, the mufti met a young Yassar Arafat in Cairo, and the torch was passed to the next generation of Islamo-fascists. (Arafat often referred to the Nazi henchman as "our hero al-Husseini.")

In his book, The Myth of Hitler's Pope, Rabbi David Dalin discloses, "Arafat continued the mufti's Nazi legacy by recruiting Nazis and neo-Nazis for Fatah and the PLO. In 1969, for example, the PLO recruited two former Nazi instructors, Erich Altern, a leader of the Gestapo's Jewish affairs section, and Willy Berner, an SS officer in the Mauthausen extermination camp. Another former Nazi, Johann Schuller, was found supplying arms to Fatah."

There are unavoidable parallels between Nazis and Islamists. Both adhere to totalitarian ideologies (though one is disguised as a religion); each group trains its adherents to kill without compunction and to show mercy to neither the young nor old; both nurse historical grudges and long for a settling of accounts; and each see Jews as the principal obstacle to the achievement of its utopian vision.

Of course, British Muslims are offended by Holocaust Memorials. While Nazism was a European phenomenon, post-World War II Hitler wannabes are found almost exclusively in the Arab and Muslim world. After the fall of Berlin, the center of anti-Semitic agitation shifted to Cairo, Damascus, Tehran, Riyadh, and Ramallah.

http://frontpagemag.com/Articles/ReadArticle.asp?ID=19624

Holocaust denial is rampant in the Muslim world.

In 1964, then-Egyptian President Gamal Abdel Nassar (who precipitated the Six-Days War) insisted:, "No one...takes seriously the lie about six million Jews who were murdered."

In 2000, a columnist for The Syria Times wrote, "The most famous myth is that of the so-called Holocaust We strongly believe that gas chambers were not used for burning (sic.) Jews."

Also in 2000, Sheikh Adel Bin Ahmad Bana'ma, a Saudi religious authority speaking at a Jeddah mosque, charged that Jews "disseminate everywhere the lie of the Holocaust and claim that Hitler killed six million Jews in gas chambers This is pure falsehood."

A year later, Palestinian religious leader Sheikh Ibrahim Mahdi declared, "One of the Jews' evil deeds has come to be called the Holocaust." However, the Sheikh insisted, it has been irrefutably proven that "this crime, carried out against some of the Jews, was planned by the Jews' leaders."

Distorting Jewish History
http://frontpagemag.com/Articles/ReadArticle.asp?ID=21111

Haj Amin al Husseini the Mufti of Jerusalem, and former president of the Supreme Muslim Council of Palestine urged Hitler to not allow Jews to flee to Palestine, and to exterminate them instead. (Serge Trifkovic, The Sword and the Prophet)

According to German officials who knew the Mufti:

"The Mufti had repeatedly suggested to the various authorities with whom he was maintaining contact, above all to Hitler, Ribbentrop, and Himmler, the extermination of European Jewry. He considered this as a comfortable solution of the Palestinian problem. . "

When Haj Amin al Husseini,spoke together with Hitler on Berlin Radio in 1942, he cried out:

"Kill the Jews - kill them with your hands, kill them with your teeth - this is well pleasing to Allah."

Both Germany and England were competing for Arab cooperation during World War II. In order to curry Arab favor, England blocked the entry of fleeing Jews into Palestine. Eichmann said in regards to the Mufti,

"We have promised him that no European Jew would enter Palestine any more."

There were Jews who tried to make deals with the Nazis to get them to spare the lives of Jews (see Hungary, the Crime within a Crime). These Jews reasoned that if they did nothing, all the Jews of Europe would be exterminated so any deal that spared any of them was better than no deal, even a deal with the Nazis. Arab propagandists turn this into an accusation of collaboration with the Nazis to take away their country out of a desire to paint the Jews as Nazis.

Hello.

I have owned several C. Crane FM Transmitters for a few years. I am very happy with them. (And yes, I know they are made by Sangean!) I use one in my car in conjunction with a notebook computer which has DeLorme's GPS program installed. I play music stored on the computer which is sent by the transmitter to my car radio and, when appropriate, the audible driving directions override the music. I also have one attached to my AOR AR7030 Plus receiver so that I can listen to it via any FM radio in the house.

The unit really packs a wallop - its signal travels almost to the entrance of my development 1/4 mile away.

The unit is well-worth the $70.00 (sometimes $60.00 on sale) and, if you don't like it, you can return it. C. Crane is, in my own experience, a fine company with which to deal. In many years of buying from them I have never had any problems whatsoever and I have always found them very responsive to my needs (even going so far as to make a few "custom" items for me).

Best,

Joe

Hi Frank,

That is a nice receiver, and the mods that you have done seem to cover
everything. The only thing that I can recommend....if this receiver uses
diodes to switch the input bandpass filters, I would replace them with
1N5767 PIN diodes. Bias them at around 60mA. I think that you can run up to
around 90mA, but that might be pushing them.
Philips also has some suitable PIN diodes, but you want to make sure that
you have a long enough minority carrier lifetime.
Congratulations on the new receiver! I haven't picked up anything new for
awhile, except that NRD-91.

If you like to build electronic kits, check out Ramsey Electronics. I have built their FM-10 and then later upgraded to the FM-100. A friend of mine built the FM25, and it too sounds great.

I get excellent coverage for around a 200 to 300 foot radius of the transmitter, which is unmodified and FCC-legal.

And what do I have to do with WBBM? All I told you is that all of us with HD installs got new firmware very recently, and have had to remove the HD signal form the air for a period to make the necessary firmware and related hardware changes.

Looking that the stuff that Google brought up, IBOC-AM gives 20 kHz of analog bandwidth for the primary digital channel. Sidebands from 15-25 kHz either side of the carrier, (5-15 kHz for the second channel). So the next question is how many bits/Hz their modem scheme uses. Various bit rates of 32 and 36 kbps were given, so it's set up with a lot of noise margin at 1.8(?) bits/Hz. (A dial up modem gets more like 7 or 8 bits/Hz on the upstream direction, at about 30 kbps and a 4 kHz Nyquist limit set by the telco's 8 kHz sample rate).

With psychoacoustic compression, how good the program sounds is going to depend on how simple the frequency spectrum is. Modern pop with synthesizers would probably sound the same. (IMHO, the source material sounds like crap to start with). But a glockenspiel concert (or any cymbals in the percussion) will sound pretty painful.

At 36 kbps I'd expect pretty much the same results as you can get with RealAudio on a dialup. No wonder that they need 8 seconds delay for the DSP to do its thing.

There is something very wrong and sick about you as shown by your need to say something negative about nearly everyone you respond to. Canadians, owners of R-75's, folks of certain political points of view, etc., etc.

What _is_ your problem?

Prancers_such_as_yourself.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

Run along, shilling 'tard.

3498. (OT?): Could DTV become the new Radio

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 17:08:57 UTC
From: mzenier@eskimo.com
Message-ID: <ea05tqakp1@eskinews.eskimo.com>
Source record: 84819

Here's a thought.

Could the sub-channels available on digital Television become a competitor
to local radio.

Digital TV has high power broadband high bit rate (18-20 megabits per second)
transmitters that cover the metropolitan areas.

What's stopping a TV station from generating music channels that use the
high bandwidth MP3 audio and the minimum necessary video signal to go
along with it? If you got the bit stream down to around a half a megabit
per second or less, any or all TV stations could transmit a half a dozen
of these and still have room for HDTV. The video could be minimal,
a low frame rate "slide show" akin to what you could get over the web.

Then all you would need was another little widget with a tuner and
some minimal processing to feed it into a video iPod. Or no video
if don't want to bother with the pictures.

Thanks for the info and advice Pete. I recently saw a comment that
standard 1N4002 type (60 Hz) diodes are actually good replacements for
the PIN diodes on the front-end band pass switching networks. Have you
heard of this?

"Hispanic" is a culture. If one spends most of their life in a particular
culture, they are part of it.

You, on the other hand, are a simply a nutcase with a radio waiting for the
VA to discover you ought to be kept under close watch in a facility. At
least you are not a ham, or you would be transmitting your hatred, racism
and bile.

I've caught Ralph Schoenman's show on WBAI a few times and he makes
some pretty informed and compelling arguments. Do you think Palestine
was barren wilderness when the Israelis were settled there? Do you
think the people who lived there happily abandoned the homes where
they had lived for generations? What's happening to the Palestinians
is analagous to what happened to the "indians" in this country with
the requisite demonization of the victums the obligatory blind eye
turned towards the crimes of the colonizers. Somehow the "kidnapping"
of 3 Israeli soldiers is an outrage but the indefinate imprisonment
without charge of hundreds of Palestinians by Israel isn't wortrhy of
mention. If the many hundreds who were massacred at the Sabra and
Shatila refugee camps had been Israelis instead of Palestinians do you
suppose the news coverage would have been different? The fact that Mr.
Schoenman spares little detail naming dates and towns where massacres
took place tends to give him some creedence. Surely you don't think
that the 30 sec. sound bits that pass for news in this country is the
totality of whats going on in the world and anyone who asserts
otherwise is ignorant. Did you bother to listen to the interview or is
this just a spontaneous ejaculation of bile. The fact that you equate
the mutually exclusive "Left-wing/Liberal/"Progressive"/Socialist and
/Islamo-Fascist/" categories and then throw in Communist, appearently
for good measure, suggests that your understanding of the world is a
little confused. But the MOST disturbing thing about your post is that
now YOU are laughing YOUR fucking ass off. Is this a condition you
aquired through intimate contact with a certain "ace?" We pray for

your speedy recovery.

Steve

3522. What is the Excellent station on 12.1770 to 12.185 right now

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 18:16:13 UTC
From: Gabriel Rapture <enraptured@charter.net>
Message-ID: <pjq4c2lu629s0tgo5pg960tabc9iuc5g16@4ax.com>
Source record: 84656

ImHotep,

I've been listening to them for about an hour, but I'm not able to hear the ID at the top of the hour. the station decided to fade out right at that time.

They did say though they were broadcasting from "Manchester Tennessee"

They are speaking about the Israeli Lebanon situation and about come Trotskyite named William Crystal.

I really like the wonderful common sense they seem to have.

Does anyone know who this is? They are still on the air I think. I receive them pretty good at 12.180. however that frequency, nor 12.170 75, or 12.185 are listed in the Primetimeshortwave printout.

Thanks

As I said before, HD is a significant change in the way DXers will pursue
their hobby in the future. This is irrespective of whether I am in
broadcasting; I am a DXer and have been for about 48 years.

Apparently your definition of "trolling" is related to your desire to hide
from the truth and the changes necessary to save AM radio.

If AM is going to die, it's going to die; but it'll die much, much
faster if bastards like you have your way. And of course, you know
that, and you know that we know it. But, being a troll, your goal is
only to start trouble. You obviously have way too much time on your
hands...

AM in rated markets can give you an idea of what is happening. In the 7 years since Fall 1998 to the Winter, 2006, AM in Los Angeles has gone from just under 24% of listening to 17%. That is a loss of about 30% of AM listening in that period, or about 3% a year.

At the same time, the average age of AM listeners has crept up by over 5 years, and most of the listeners are in age groups that are of no interest to most advertisers.

And LA is not the worst of cases, because there is such a huge collection of ethnic groups that are only served on AM (staitons in farsi, Chinese dialects, Korean, etc) that many AMs are still prosperous due to serving a niche not served on AM. In markets like Columbus, GA or Wichita, things are even worse.

> And of course, you know
> that, and you know that we know it.

I know no such thing. I know that AM has great potential with HD if the roll out of receivers (7 new ones announced this week, including a $149 after market car radio) comes fast enough and stations promote it enough.

> But, being a troll, your goal is
> only to start trouble. You obviously have way too much time on your
> hands...

Being a realist, I know that AM, where I started in radio, is a 90 year old medium and will definitely die if we do not improve it in a way that is palpable by the listener, especially the under-45 crowd.

I said our company was valued at that price. I am responsible for programming performance on our radio properties... the former Hispanic Broadcasting Corp. I never said I "control" the stations, as they are not mine. MY duty is to make them perform better, which is exactly what we are doing.

Two good DX buddies of mine have the ALA 1530 and I have the DX 1.
I think (biased) that my DX 1 has the edge, but note it must be carefully mounted according to the instructions.
See my review at:
http://www.dxing.info/equipment/dx1pro.dx

However, the ALA 1530 is much more flexible in it's use. It can be casually mounted in your apartment room without fuss, or in your loft and still give good results. Of course it will perform even better if mounted high outside on a rotator. The rotator is necessary as it is directional on the lower frequencies.

Other DX friends have upgraded from the ALA 1530 to the ALA 100 and claim better results still.

3556. Wellbrook ALA 100 with Rotator - Construction Details

Newsgroup: rec.radio.shortwave
Date: 2006-07-22 20:34:39 UTC

Those with an interest in building a Wellbrook ALA 100 setup for use on an antenna rotator may want to check out my most recent blog entry (July 22nd). I have pictures and construction details that describe the way I approached the project.

I believe the ALA 100 is the most flexible and useful Wellbrook model for the do-it-yourselfer. You can construct the loop in whatever manner suits your abilities and requirements.

My use of the ALA 100 is primarily for DXing foreign medium wave signals, with a secondary use of hearing third-world broadcasters on the tropical bands. I've heard of some amateur radio operators using Wellbrook antennas for a receive-only solution, too.

Absolutely. Inarguable. But, in this case, the preacher is the addled
one. And his argument is that *he's* the voice of clear-headedness.

>The demographics of the Liberal/Democrats assure this, simply look up who and
>what their constituency consists of.

So, go ahead with the next piece of logic: Which came first: the
liberals, the addled-ness or the need to become addled?

I'd say that liberal-mindedness promotes the possibility that
occasional addled-ness isn't a big problem. But living in a world
"run" by the Rove/Rush/Right machine perhaps forces a need for it.

But I could be wrong. I'm open to other interpretations.

Shortwave folks,,

The more I listen to you folks here, the more I realize that most of you are INSANE and should be institutionalized. At this point it is time for me to call in a white PhD friend of mine who travels America trying to educate you all about race, and why Amerikkkans wants to slaughter everyone who is not "white". Listen to what he has to say and make the necessary positive changes in your life immediately. You can buy a new computer when you mess it up, but you can't buy a new brain. Stop the mad dog hatred!!

Your minds are a terrible thing to waste!

Tim "White man" Wise

What Kind of Card is Race?

The Absurdity (and Consistency) of White Denial

By Tim Wise

Published on Counterpunch, www.counterpunch.org, April 24, 2006

Recently, I was asked by someone in the audience of one of my speeches, whether or not I believed that racism--though certainly a problem--might also be something conjured up by people of color in situations where the charge was inappropriate. In other words, did I believe that occasionally folks play the so-called race card, as a ploy to gain sympathy or detract from their own shortcomings? In the process of his query, the questioner made his own opinion all too clear (an unambiguous yes), and in that, he was not alone, as indicated by the reaction of others in the crowd, as well as survey data confirming that the belief in black malingering about racism is nothing if not ubiquitous.

It's a question I'm asked often, especially when there are several high-profile news events transpiring, in which race informs part of the narrative. Now is one of those times, as a few recent incidents demonstrate: Is racism, for example, implicated in the alleged rape of a young black woman by white members of the Duke University lacrosse team? Was racism implicated in Congresswoman Cynthia McKinney's recent confrontation with a member of the Capitol police? Or is racism involved in the ongoing investigation into whether or not Barry Bonds--as he is poised to eclipse white slugger Babe Ruth on the

all-time home run list--might have used steroids to enhance his performance?*

Although the matter is open to debate in any or all of these cases, white folks have been quick to accuse blacks who answer in the affirmative of playing the race card, as if their conclusions have been reached not because of careful consideration of the facts as they see them, but rather, because of some irrational (even borderline paranoid) tendency to see racism everywhere. So too, discussions over immigration, "terrorist" profiling, and Katrina and its aftermath often turn on issues of race, and so give rise to the charge that as regards these subjects, people of color are "overreacting" when they allege racism in one or another circumstance.

Asked about the tendency for people of color to play the "race card," I responded as I always do: First, by noting that the regularity with which whites respond to charges of racism by calling said charges a ploy, suggests that the race card is, at best, equivalent to the two of diamonds. In other words, it's not much of a card to play, calling into question why anyone would play it (as if it were really going to get them somewhere). Secondly, I pointed out that white reluctance to acknowledge racism isn't new, and it isn't something that manifests only in situations where the racial aspect of an incident is arguable. Fact is, whites have always doubted claims of racism at the time they were being made, no matter how strong the evidence, as will be seen below. Finally, I concluded by suggesting that whatever "card" claims of racism may prove to be for the black and brown, the denial card is far and away the trump, and whites play it regularly: a subject to which we will return.

Turning Injustice into a Game of Chance: The Origins of Race as "Card"

First, let us consider the history of this notion: namely, that the "race card" is something people of color play so as to distract the rest of us, or to gain sympathy. For most Americans, the phrase "playing the race card" entered the national lexicon during the O.J. Simpson trial. Robert Shapiro, one of Simpson's attorneys famously claimed, in the aftermath of his client's acquittal, that co-counsel Johnnie Cochran had "played the race card, and dealt it from the bottom of the deck." The allegation referred to Cochran's bringing up officer Mark Fuhrman's regular use of the 'n-word' as potentially indicative of his propensity to frame Simpson. To Shapiro, whose own views of his client's innocence apparently shifted over time, the issue of race had no place in the trial, and even if Fuhrman was a racist, this fact had no bearing on whether or not O.J. had killed his ex-wife and Ron Goldman. In other words, the idea that O.J. had been framed because of racism made no sense and to bring it up was to interject race into an arena where it was, or should have been, irrelevant.

That a white man like Shapiro could make such an argument, however, speaks to the widely divergent way in which whites and blacks view our

respective worlds. For people of color--especially African Americans--the idea that racist cops might frame members of their community is no abstract notion, let alone an exercise in irrational conspiracy theorizing. Rather, it speaks to a social reality about which blacks are acutely aware. Indeed, there has been a history of such misconduct on the part of law enforcement, and for black folks to think those bad old days have ended is, for many, to let down their guard to the possibility of real and persistent injury (1).

So if a racist cop is the lead detective in a case, and the one who discovers blood evidence implicating a black man accused of killing two white people, there is a logical alarm bell that goes off in the head of most any black person, but which would remain every bit as silent in the mind of someone who was white. And this too is understandable: for most whites, police are the helpful folks who get your cat out of the tree, or take you around in their patrol car for fun. For us, the idea of brutality or misconduct on the part of such persons seems remote, to the point of being fanciful. It seems the stuff of bad TV dramas, or at the very least, the past--that always remote place to which we can consign our national sins and predations, content all the while that whatever demons may have lurked in those earlier times have long since been vanquished.

To whites, blacks who alleged racism in the O.J. case were being absurd, or worse, seeking any excuse to let a black killer off the hook--ignoring that blacks on juries vote to convict black people of crimes every day in this country. And while allegations of black "racial bonding" with the defendant were made regularly after the acquittal in Simpson's criminal trial, no such bonding, this time with the victims, was alleged when a mostly white jury found O.J. civilly liable a few years later. Only blacks can play the race card, apparently; only they think in racial terms, at least to hear white America tell it.

Anything but Racism: White Reluctance to Accept the Evidence

Since the O.J. trial, it seems as though almost any allegation of racism has been met with the same dismissive reply from the bulk of whites in the U.S. According to national surveys, more than three out of four whites refuse to believe that discrimination is any real problem in America (2). That most whites remain unconvinced of racism's salience--with as few as six percent believing it to be a "very serious problem," according to one poll in the mid 90s (3)--suggests that racism-as-card makes up an awfully weak hand. While folks of color consistently articulate their belief that racism is a real and persistent presence in their own lives, these claims have had very little effect on white attitudes. As such, how could anyone believe that people of color would somehow pull the claim out of their hat, as if it were guaranteed to make white America sit up and take notice? If anything, it is likely to be ignored, or even attacked, and in a particularly vicious manner.

That bringing up racism (even with copious documentation) is far from an effective "card" to play in order to garner sympathy, is evidenced by the way in which few people even become aware of the studies confirming its existence. How many Americans do you figure have even heard, for example, that black youth arrested for drug possession for the first time are incarcerated at a rate that is forty-eight times greater than the rate for white youth, even when all other factors surrounding the crime are identical (4)?

How many have heard that persons with "white sounding names," according to a massive national study, are fifty percent more likely to be called back for a job interview than those with "black sounding" names, even when all other credentials are the same (5)?

How many know that white men with a criminal record are slightly more likely to be called back for a job interview than black men without one, even when the men are equally qualified, and present themselves to potential employers in an identical fashion (6)?

How many have heard that according to the Justice Department, Black and Latino males are three times more likely than white males to have their vehicles stopped and searched by police, even though white males are over four times more likely to have illegal contraband in our cars on the occasions when we are searched (7)?

How many are aware that black and Latino students are about half as likely as whites to be placed in advanced or honors classes in school, and twice as likely to be placed in remedial classes? Or that even when test scores and prior performance would justify higher placement, students of color are far less likely to be placed in honors classes (8)? Or that students of color are 2-3 times more likely than whites to be suspended or expelled from school, even though rates of serious school rule infractions do not differ to any significant degree between racial groups (9)?

Fact is, few folks have heard any of these things before, suggesting how little impact scholarly research on the subject of racism has had on the general public, and how difficult it is to make whites, in particular, give the subject a second thought.

Perhaps this is why, contrary to popular belief, research indicates that people of color are actually reluctant to allege racism, be it on the job, or in schools, or anywhere else. Far from "playing the race card" at the drop of a hat, it is actually the case (again, according to scholarly investigation, as opposed to the conventional wisdom of the white public), that black and brown folks typically "stuff" their experiences with discrimination and racism, only making an allegation of such treatment after many, many incidents have transpired, about which they said nothing for fear of being ignored or attacked (10). Precisely because white denial has long trumped claims of racism, people of color tend to underreport their experiences with racial bias, rather than exaggerate them. Again, when it comes to playing a race card, it is more accurate to say that whites are the dealers with

the loaded decks, shooting down any evidence of racism as little more than the fantasies of unhinged blacks, unwilling to take personal responsibility for their own problems in life.

Blaming the Victims for White Indifference

Occasionally, white denial gets creative, and this it does by pretending to come wrapped in sympathy for those who allege racism in the modern era. In other words, while steadfastly rejecting what people of color say they experience--in effect suggesting that they lack the intelligence and/or sanity to accurately interpret their own lives--such commentators seek to assure others that whites really do care about racism, but simply refuse to pin the label on incidents where it doesn't apply. In fact, they'll argue, one of the reasons that whites have developed compassion fatigue on this issue is precisely because of the overuse of the concept, combined with what we view as unfair reactions to racism (such as affirmative action efforts which have, ostensibly, turned us into the victims of racial bias). If blacks would just stop playing the card where it doesn't belong, and stop pushing for so-called preferential treatment, whites would revert back to our prior commitment to equal opportunity, and our heartfelt concern about the issue of racism.

Don't laugh. This is actually the position put forward recently by James Taranto, of the Wall Street Journal, who in January suggested that white reluctance to embrace black claims of racism was really the fault of blacks themselves, and the larger civil rights establishment (11). As Taranto put it: "Why do blacks and whites have such divergent views on racial matters? We would argue that it is because of the course that racial policies have taken over the past forty years." He then argues that by trying to bring about racial equality--but failing to do so because of "aggregate differences in motivation, inclination and aptitude" between different racial groups--policies like affirmative action have bred "frustration and resentment" among blacks, and "indifference" among whites, who decide not to think about race at all, rather than engage an issue that seems so toxic to them. In other words, whites think blacks use racism as a crutch for their own inadequacies, and then demand programs and policies that fail to make things much better, all the while discriminating against them as whites. In such an atmosphere, is it any wonder that the two groups view the subject matter differently?

But the fundamental flaw in Taranto's argument is its suggestion--implicit though it may be--that prior to the creation of affirmative action, white folks were mostly on board the racial justice and equal opportunity train, and were open to hearing about claims of racism from persons of color. Yet nothing could be further from the truth. White denial is not a form of backlash to the past forty years of civil rights legislation, and white indifference to claims of racism did not only recently emerge, as if from a previous place where whites and blacks had once seen the world similarly.

Simply put: whites in every generation have thought there was no real problem with racism, irrespective of the evidence, and in every generation we have been wrong.

Denial as an Intergenerational Phenomenon

So, for example, what does it say about white rationality and white collective sanity, that in 1963--at a time when in retrospect all would agree racism was rampant in the United States, and before the passage of modern civil rights legislation--nearly two-thirds of whites, when polled, said they believed blacks were treated the same as whites in their communities--almost the same number as say this now, some forty-plus years later? What does it suggest about the extent of white folks' disconnection from the real world, that in 1962, eighty-five percent of whites said black children had just as good a chance as white children to get a good education in their communities (12)? Or that in May, 1968, seventy percent of whites said that blacks were treated the same as whites in their communities, while only seventeen percent said blacks were treated "not very well" and only 3.5 percent said blacks were treated badly? (13)?

What does it say about white folks' historic commitment to equal opportunity--and which Taranto would have us believe has only been rendered inoperative because of affirmative action--that in 1963, three-fourths of white Americans told Newsweek, "The Negro is moving too fast" in his demands for equality (14)? Or that in October 1964, nearly two-thirds of whites said that the Civil Rights Act should be enforced gradually, with an emphasis on persuading employers not to discriminate, as opposed to forcing compliance with equal opportunity requirements (15)?

What does it say about whites' tenuous grip on mental health that in mid-August 1969, forty-four percent of whites told a Newsweek/Gallup National Opinion Survey that blacks had a better chance than they did to get a good paying job--two times as many as said they would have a worse chance? Or that forty-two percent said blacks had a better chance for a good education than whites, while only seventeen percent said they would have a worse opportunity for a good education, and eighty percent saying blacks would have an equal or better chance? In that same survey, seventy percent said blacks could have improved conditions in the "slums" if they had wanted to, and were more than twice as likely to blame blacks themselves, as opposed to discrimination, for high unemployment in the black community (16).

In other words, even when racism was, by virtually all accounts (looking backward in time), institutionalized, white folks were convinced there was no real problem. Indeed, even forty years ago, whites were more likely to think that blacks had better opportunities, than to believe the opposite (and obviously accurate) thing: namely, that whites were advantaged in every realm of American life.

Truthfully, this tendency for whites to deny the extent of racism and racial injustice likely extends back far before the 1960s. Although public opinion polls in previous decades rarely if ever asked questions about the extent of racial bias or discrimination, anecdotal surveys of white opinion suggest that at no time have whites in the U.S. ever thought blacks or other people of color were getting a bad shake. White Southerners were all but convinced that their black slaves, for example, had it good, and had no reason to complain about their living conditions or lack of freedoms. After emancipation, but during the introduction of Jim Crow laws and strict Black Codes that limited where African Americans could live and work, white newspapers would regularly editorialize about the "warm relations" between whites and blacks, even as thousands of blacks were being lynched by their white compatriots.

From Drapetomania to Victim Syndrome -- Viewing Resistance as Mental Illness

Indeed, what better evidence of white denial (even dementia) could one need than that provided by "Doctor" Samuel Cartwright, a well-respected physician of the 19th century, who was so convinced of slavery's benign nature, that he concocted and named a disease to explain the tendency for many slaves to run away from their loving masters. Drapetomania, he called it: a malady that could be cured by keeping the slave in a "child-like state," and taking care not to treat them as equals, while yet striving not to be too cruel. Mild whipping was, to Cartwright, the best cure of all. So there you have it: not only is racial oppression not a problem; even worse, those blacks who resist it, or refuse to bend to it, or complain about it in any fashion, are to be viewed not only as exaggerating their condition, but indeed, as mentally ill (17).

And lest one believe that the tendency for whites to psychologically pathologize blacks who complain of racism is only a relic of ancient history, consider a much more recent example, which demonstrates the continuity of this tendency among members of the dominant racial group in America.

A few years ago, I served as an expert witness and consultant in a discrimination lawsuit against a school district in Washington State. Therein, numerous examples of individual and institutional racism abounded: from death threats made against black students to which the school district's response was pitifully inadequate, to racially disparate "ability tracking" and disciplinary action. In preparation for trial (which ultimately never took place as the district finally agreed to settle the case for several million dollars and a commitment to policy change), the school system's "psychological experts" evaluated dozens of the plaintiffs (mostly students as well as some of their parents) so as to determine the extent of damage done to them as a result of the racist mistreatment. As one of the plaintiff's experts, I reviewed the reports of said psychologists, and while I was not surprised to see them downplay the damage done to the black folks

in this case, I was somewhat startled by how quickly they went beyond the call of duty to actually suggest that several of the plaintiffs exhibited "paranoid" tendencies and symptoms of borderline personality disorder. That having one's life threatened might make one a bit paranoid apparently never entered the minds of the white doctors. That facing racism on a regular basis might lead one to act out, in a way these "experts" would then see as a personality disorder, also seems to have escaped them. In this way, whites have continued to see mental illness behind black claims of victimization, even when that victimization is blatant.

In fact, we've even created a name for it: "victimization syndrome." Although not yet part of the DSM-IV (the diagnostic manual of the American Psychiatric Association, used by its members so as to evaluate patients), it is nonetheless a malady from which blacks suffer, to hear a lot of whites tell it. Whenever racism is brought up, such whites insist that blacks are being encouraged (usually by the civil rights establishment) to adopt a victim mentality, and to view themselves as perpetual targets of oppression. By couching their rejection of the claims of racism in these terms, conservatives are able to parade as friends to black folks, only concerned about them and hoping to free them from the debilitating mindset of victimization that liberals wish to see them adopt.

Aside from the inherently paternalistic nature of this position, notice too how concern over adopting a victim mentality is very selectively trotted out by the right. So, for example, when crime victims band together--and even form what they call victim's rights groups--no one on the right tells them to get over it, or suggests that by continuing to incessantly bleat about their kidnapped child or murdered loved one, such folks are falling prey to a victim mentality that should be resisted. No indeed: crime victims are venerated, considered experts on proper crime policy (as evidenced by how often their opinions are sought out on the matter by the national press and politicians), and given nothing but sympathy.

Likewise, when American Jews raise a cry over perceived anti-Jewish bigotry, or merely teach their children (as I was taught) about the European Holocaust, replete with a slogan of "Never again!" none of the folks who lament black "victimology" suggests that we too are wallowing in a victimization mentality, or somehow at risk for a syndrome of the same name.

In other words, it is blacks and blacks alone (with the occasional American Indian or Latino thrown in for good measure when and if they get too uppity) that get branded with the victim mentality label. Not quite drapetomania, but also not far enough from the kind of thinking that gave rise to it: in both cases, rooted in the desire of white America to reject what all logic and evidence suggests is true. Further, the selective branding of blacks as perpetual victims, absent the application of the pejorative to Jews or crime victims (or the

families of 9/11 victims or other acts of terrorism), suggests that at some level white folks simply don't believe black suffering matters. We refuse to view blacks as fully human and deserving of compassion as we do these other groups, for whom victimization has been a reality as well. It is not that whites care about blacks and simply wish them not to adopt a self-imposed mental straightjacket; rather, it is that at some level we either don't care, or at least don't equate the pain of racism even with the pain caused by being mugged, or having your art collection confiscated by the Nazis, let alone with the truly extreme versions of crime and anti-Semitic wrongdoing.

Conclusion -- See No Evil, Hear No Evil, Wrong as Always

White denial has become such a widespread phenomenon nowadays, that most whites are unwilling to entertain even the mildest of suggestions that racism and racial inequity might still be issues. To wit, a recent survey from the University of Chicago, in which whites and blacks were asked two questions about Hurricane Katrina and the governmental response to the tragedy. First, respondents were asked whether they believed the government response would have been speedier had the victims been white. Not surprisingly, only twenty percent of whites answered in the affirmative. But while that question is at least conceivably arguable, the next question seems so weakly worded that virtually anyone could have answered yes without committing too much in the way of recognition that racism was a problem. Yet the answers given reveal the depths of white intransigence to consider the problem a problem at all.

So when asked if we believed the Katrina tragedy showed that there was a lesson to be learned about racial inequality in America--any lesson at all--while ninety percent of blacks said yes, only thirty-eight percent of whites agreed (18). To us, Katrina said nothing about race whatsoever, even as blacks were disproportionately affected; even as there was a clear racial difference in terms of who was stuck in New Orleans and who was able to escape; even as the media focused incessantly on reports of black violence in the Superdome and Convention Center that proved later to be false; even as blacks have been having a much harder time moving back to New Orleans, thanks to local and federal foot-dragging and the plans of economic elites in the city to destroy homes in the most damaged (black) neighborhoods and convert them to non-residential (or higher rent) uses.

Nothing, absolutely nothing, has to do with race nowadays, in the eyes of white America writ large. But the obvious question is this: if we have never seen racism as a real problem, contemporary to the time in which the charges are being made, and if in all generations past we were obviously wrong to the point of mass delusion in thinking this way, what should lead us to conclude that now, at long last, we've become any more astute at discerning social reality than we were before? Why should we trust our own perceptions or instincts on the matter, when we have run up such an amazingly bad track record as

observers of the world in which we live? In every era, black folks said they were the victims of racism and they were right. In every era, whites have said the problem was exaggerated, and we have been wrong.

Unless we wish to conclude that black insight on the matter--which has never to this point failed them--has suddenly converted to irrationality, and that white irrationality has become insight (and are prepared to prove this transformation by way of some analytical framework to explain the process), then the best advice seems to be that which could have been offered in past decades and centuries: namely, if you want to know about whether or not racism is a problem, it would probably do you best to ask the folks who are its targets. They, after all, are the ones who must, as a matter of survival, learn what it is, and how and when it's operating. We whites on the other hand, are the persons who have never had to know a thing about it, and who--for reasons psychological, philosophical and material--have always had a keen interest in covering it up.

In short, and let us be clear on it: race is not a card. It determines who the dealer is, and who gets dealt.

* Personally, I have no idea whether or not Barry Bonds has used anabolic steroids during the course of his career, nor do I think the evidence marshaled thus far on the matter is conclusive, either way. But I do find it interesting that many are calling for the placement of an asterisk next to Bonds' name in the record books, especially should he eclipse Ruth, or later, Hank Aaron, in terms of career home runs. The asterisk, we are told, would differentiate Bonds from other athletes, the latter of which, presumably accomplished their feats without performance enhancers. Yet, while it is certainly true that Aaron's 755 home runs came without any form of performance enhancement (indeed, he, like other black ball-players had to face overt hostility in the early years of their careers, and even as he approached Ruth's record of 714, he was receiving death threats), for Ruth, such a claim would be laughable. Ruth, as with any white baseball player from the early 1890s to 1947, benefited from the "performance enhancement" of not having to compete against black athletes, whose abilities often far surpassed their own. Ruth didn't have to face black pitchers, nor vie for batting titles against black home run sluggers. Until white fans demand an asterisk next to the names of every one of their white baseball heroes -- Ruth, Cobb, DiMaggio, and Williams, for starters -- who played under apartheid rules, the demand for such a blemish next to the name of Bonds can only be seen as highly selective, hypocritical, and ultimately racist. White privilege and protection from black competition certainly did more for those men's game than creotine or other substances could ever do for the likes of Barry Bonds.

Nothing wrong with the technology, 'tard boy. AM (MW) comes in just fine here.
And it comes in even better without the HD/IBOC QRM.

Go shill your wares elsewhere.

There is everything wrong with the technology. It sounds so inferior that nobody who "grew up" on FM will touch it, as it is irritating. Two generations now have no use for AM. The only users, like you, are old farts who do not look at the future or have lost most of their hearing.

```

The term "radio difusora" means "radio station" and if there is nothing after the term, it is totally generic. "Radio Difusora Fluminense" would be "River Radio." Plain "radio difusora" is not specific to any radio station and can be applied to any radio station in the world... "radio difusora

WABC" is WABC radio in New York. Obviously, DX n&#65533;o fala portugu&#65533;s.
>
> Any 'good' DXer would have known exactly what I was posting about.

The term is generic to every radio staiton in the world.

Hey, old fart! My hearing is just fine, been tested. It's great! I always wore earplugs.

Stuff your panty hose in it, Edweenie!

That must have made the DXing difficult. Unless you made it up. Another
paper DXer.

Are you related to Monferini?

Yes, these SWL fanatics can't get out of bed without their cheap
plastic SW receivers ! They have to keep buying new receivers, because
the old ones get ruined by all the facials !

1947? I lived for one year in Martinsville,Indiana in 1947.At that age,I didn't know what a transmitter was.My older brother and I was standing in line in that little park in Martinsville,it was near Christmas time and Santa Clause was handing out free bits of candy to all of the snot nosed kids in Martinsville.Brother said,let's go through the line again. cuhulin

And most markets still had plenty of space on the FM band then. Perfect for
local coverage, perfect for nightthme coverage.

>

That's OK. That's hardly death. AM would be no deader than FM was in the
50s.

I expect DXing IBOC will be all equipment rather than the mental aspects of
DXing. It won't be like listening for ID clues between a couple of stations
fighting it out in the noise.

> grey area and local service from the 50's through the 90's.

Why would a prospective owner have wanted to start or expand a AM operation
in the 50s and 60s when he could have gone to FM?

>
> The FCC never forced editorials. To the contrary, until the Fairness
> Doctrine was killed under Reagan, we were very afraid of doing editorials
> and very, very few of us did them due to the risks.

The FCC did force editoral content, however. And, in that era, alot of the
stations were broadcasting editorals, and the inevetable follow-ups from
the Speaker from the Institute for Editoral Reply.

Thankfully, that's all disappeared with the end of the fairness doctrine.

>
> The FCC, buy restricting to low FM powers (100kw and under) and very low

The average postings on alt.radio.broadcastings are less than 100 per month.
Pretty dull group.

Well, over $300,000,000 has already been spent on HD installs. There is no lie in stating that HD is happening, and there is a major commitment by every large broadcaster except Salem to the technology. There is also great concern about preventing the loss of AM, and HD is being emplyed as the ONLY solution.

If you think this is exaggeration, trolling, a lie or whatever, you are simply trying to cover the sky with you hand.

>
> But what, the FCC did this on their own, without being lobbyed?

Yes. The FCC had a policy of localism. Local applicants had a huge advantage
over companies or distant applicants for new TV and FMs as well as AMs in
that period, and localism was required in the license renewal process via
ascertainment of needs, community (PA) programming, news content, etc. The
FCC was obcessed with localism. I do not know of any station or group that
lobbied for it as a policy, although plenty of applicants went for the
licenses based on pushing local ownership and management.

By the end of the 60's, the FM band was pretty full, especially in the major
markets, and the FCC was starting on its way to break up the clears.
>

> Why would a prospective owner have wanted to start or expand a AM
> operation
> in the 50s and 60s when he could have gone to FM?

FM was not profitable until the mid-70's on a major scale. In the 50's, the number of FMs declined between 1950 and 1960... by nearly 25%. It was not until the FCC mandated an end to simulcasting in the late 60's that FM started to react, based on new programming, but forced by the FCC.

>> The FCC never forced editorials. To the contrary, until the Fairness
>> Doctrine was killed under Reagan, we were very afraid of doing editorials

>
> The FCC did force editoral content, however.

No, they did everything they could to prevent editorializing, especially the requirement to give equal time for opposing viewpoints. I never worked with a station from 1959 through the 80's that editorialized. It was legally too full of problems and could put the license in jeopardy.

> And, in that era, alot of the
> stations were broadcasting editorals, and the inevetable follow-ups from

Actually, very very few did. Mostly either small town stations that editorialized for the blood drive, or major market ones who had on-staff lawyers, who editorialized for the blood drive.
>
> Thankfully, that's all disappeared with the end of the fairness doctrine.

Yes, now we can all editorialize freely without having to notify, grant replies, etc.

I agree with you 100%. Unregulated capitalism is unacceptable and even with regulations in place to protect people there are still too many problems.

It was interesting to note that when something affects him then it is all about bean counting and $$$ but when something affects someone else it's tough shit. I was never a big fan of hypocrisy.

You mean you're trying to pull the wool over our eyes, don't you? You
are a liar and a shill. Like I said, thinking you can 'save' AM with HD
is like thinking you can "correct" a toothache by blowing the person's
head off. Any one who denies this is simply afraid to face stark
realities.

The problem with AM, in everybody's proprietary research, is that the sound
is such a barrier that nobody in the most recent two generations will listen

to it. Until the sound is "fixed" there is no way to prevent the decline, ageing and eventual obsolescence of AM. Already, 75% of the band's listeners are over the age that advertisers are interested in.

In LA, which is actually a heavier user of AM than many markets, less than 10% of the 12-24 listening is to AM. In 12-34, it is 6%, with 6 different FMs each having more 12-34 listening than the entire AM band in that age group.

You didn't know that, did you!

Hey, just like Arbitrlon, one can be a prophet for the concept yet a critic
of the implementation. I am currently working on awareness of the need to
hurry the Intel-iBiquity alliance's development of a chip that will allow
efficient portables.... my gripe about HD.

I don't know whether you're retarded or a Univision employee (or both),
but this guy is a complete piece of shit. He comes to this group
spouting all kinds of bullshit that is hostile to the interests of the
people here, whines like a baby when he catches hell and says the same
thing over and over and over....all to elicit a reaction of outrage and
indignation on the part of the posters here. He is good at trolling.
I'll give him that. But he's a piece of shit. No one denies that AM is
dying, but in that case let it die with dignity instead of pissing on
it when it's down.

Yo yo yo... ever hear of C-QUAM??? It produces a hi fidelity analog signal, IN FUCKING STEREO, without subjecting the entire band to the interference that IBOC does. And I've heard C-Quam STEREO signals from hundreds of miles away via skywave at night. But, lo and behold, my firends who have been ripped off by buying HD radios, can't seem to get their digital carriers from across town...works welll... and the buzzsaw on the main and adjacent channels, I just love it.

...and IBOC at night???? Please don't make me punch your retarded fucking LED's out.

IBOC on AM is a JOKE... hahaha... J O K E joke.... turn the C-Quam back on, send iNiquity their splatterbox back and go the fuck away.

Gradual? Having less audience for the whole band than any of 6 FM stations
is not slow death... it is death already in the younger demos, where the ad
money is. In a few years, the 35-44 will be gone entirely, and the 45-54
will shrink. At that point, there is no ad revenue. Not one national buy in
LA this year has been for 55+.

The sad thing is that we waited, as an industry, till now.

AM is not a person. There is no dignity in its death, but there is the loss off tens of thousands of jobs, and the losses to maybe hundreds of thousands of mutual fund shareholders, insurance companies and pension plans.

Further, whether you agree with me or not, HD is coming and it is time to discuss whether any of the remaining receiver manufacturers, like ICOM, will produce receivers or receiver modules for HD. This is going to be the new reality, and countries like Mexico and Colombia and Brazil in this Hemisphere are already reviewing or have adopted the standard. Rede Globo in Brazil has ordered $2 million in HD devices, for example, and plans to convert all its AMs in the next several years.

It was tried and failed, because there were legal delays that caused it to be introduced after FM had already taking th edominant position in music radio. Nobody cared, starting with most radio stations.

The only way to bring a quality improvement to AM is by riding on the same system that FM uses to go digital.

By the way, it is not about stereo. It is about being digital.

> And I've heard C-Quam STEREO signals from

The stations love it. It enhances the coverage of analog AMs where it matters, in the local market.

CQuam is dead. It was dead in 1985. Move on.

Hate to tell you this, dude, but a lot of places don't even know what a real ham is, either. I have to go all the way to Wisconsin to go to a real radio store anymore. Back in the 60's we had Olson, Radio Shack and we could order from Burstein Appleby by mail. I was only a kid back then. And Radio Shack had real radio stuff.

BTW, did you know that the Twin Towers and the other buildings were built over the old Radio Row neighborhood in New York?

The question should be: "Are there still Militialoons and
Pay-triots out there who still buy these things?"
We had two PAY-triot kooks living in our town that I knew of.
One of 'em purchased a whole bunch of GROSSLY OVERPRICED
gold numismatic coins, storable dry food and water jugs along
with other useless crap prior to Y2K thinking the world would end
on Jan 01 2000 when all the computers stopped working.
He ended up having his house sold at Sheriff Sale due to non-payment
of taxes and default on his mortgauge in 2002. The other guy was
caught selling meth from a lab he had in his garage and has not
been seen since he went to jail and his live-in and 3 feral kids
are someplace in AZ no doubt on welfare on some reservation or
some other shithole part of town. Yup! Gotta love these shortwave
radio listening kooks, froot-loops and loons.

I wonder if a TinyTenna will pick up The Great Liberty Net and Pastor Pete Peters.

If it will, I want one asap.

Mr. Lauterback should reveal the secret behind this technological blockbuster.

Too bad Art Collins and Curtis LeMay aren't around to hook one of these to an R-390A to make it a really good performer .. :-).

I bet the Pentagon would buy them by the thousands.

>

CQuam is dead for reasons other than industrial delays in
implementation. Although, in my never to be humble opinion, it's a
better solution, you hit the nail here:

> it is not about stereo. It is about being digital.

FCC will not approve any new modulation technology that isn't digital.

This despite earlier mandates that X-band allocations must be C-Quam
equipped. Now, that mandate is dead in favor of the Powell FCC's digital
mandate.

And while it may be here, and it may be inevitable, now, the
implementation has been poorly orchestrated, and with IBOC rash trashing
the bands before receivers have been widely available, short sighted in
the extreme.

What's been done, sadly, is far more deleterious to AM usage than
doing nothing. Because it's not only DXers who are affected, here. It's
users in local coverage areas, who are now dealing with noises that they
never had to before, in areas which, like where I live, are protected as
local coverage but protected local stations are hit with IBOC
interference. And if noise is one of the primary objections to AM usage,
any system that introduces noise to the bands, even if that noise is
gone in the digital mode, will only add to the objections of users who
have marginal interst in AM anyway. Especially when the hardware to
enjoy the new mode is both widely unavailable, and costly. Even if it's
coming. The negative impression made by IBOC rash today, will plant
seeds of undesirability that will persist. And you'll not get a fair
trial when the new hardware is widely available.

What I'm seeing, is interest in HD-AM by users who are interested in AM content, and who regularly use AM anyway. But little or no interest in users who do not regularly use AM. Regardless of the audio quality....if there is no interest in the programming, there will be little interest in how good it may or may not sound.

The only potential uptick I see is in those auto systems where HD is included as a standard feature. Sampling of HD, at that point, would be a natural extension of radio sampling in general...playing with a new radio in a new car is fairly commonplace. See what it sounds like, on both bands...even if only to set the presets...there's still sampling going on. In that context, HD may get a fair hearing, and perhaps some encouraging acceptance. So, as with most radio techological innovations, it's going to have to be in the cars in order to expose that captive audience to a fair hearing of HD-AM for an interest to be generated. (This, despite the fact that a majority of listening is not in cars.) But for those listeners who would have to actively pursue an HD experience without current regular AM usage...I'm not seeing it.

So far, you've been talking about how the stations love HD-AM. You and I know that the success of any radio station is found in listener centric product and behaviour. The point that radio stations love HD-AM is unimportant. It's the listener's embrace that matters. And outside of controlled demostrations, there is nothing to suggest that there is more interest in HD-AM than in C-Quam. And the jury will be out for some time to come.

I did mention the spiral configuration to him, but he didn't comment on it.
The construction seemed to be easier, so it's the only style I considered
from the start.

You should really be ashamed of yourself.

It's one thing troll a newsgroup. It's not a nice thing, but it's
forgiveable. But to mount a moral high horse and lament the loss of
jobs and pension funds that you are personally, and intentionally,
destroying is beyond rude. It is extremely distasteful, and sad. You
obviously get some sort of 'kick' out of visiting this group, saying
bizarre things, deriding the interests of others and just generally
shitting where other people live. Do you ever wonder why? Why do you
derive more satisfaction out of putting other people down than from
pursing interests of your own? Might be worth a moment's reflection.

There ya go. A REAL compatible system, and it doesn't annihilate the
adjacents, either. It's also just as likely to save AM as IBOC (moreso,
imho), and there are already tens of thousands of radios already out there
to receive it.

Oh, and David Eduardo... this should have some meaning to you....

En boca cerrada no entran moscas..

The rest of you, look it up.

I don't know where you are coming from on this. I grew up listening to
FM and AM and I think AMBCB sounds just fine. AMBCB has good fidelity
and so does FM. AMBCB is not stereo but I don't care as I listen to
talk radio and news on that band. I don't spend much time with FM.
Generally I listen to AMBCB, short wave, and spend time on the Internet
for news.

This is what is bothering me about the move to HD. The move is supposed
to be an improvement but it does not seem that way to me. The move to HD
is just going to cost me money, not make an improvement, and change my
listening in ways I don't want. It's a lousy deal for me to spend money
I don't need to spend to keep getting what I already have. Same problem
for DRM on short wave.

- Canada is phasing out AM rapidly in all but the biggest cities.
- This is because they believe there that AM is not the way of
- the future. AMs are left in big cit9ies to serve niche and minority
- audiences, like the Chinese stations in Vancouver or the
- standards station in Toronto.

This would naturally mean that many Canadians driving around
in their Cars and Trucks with older AM/FM Radio's in them; and
at home late at night with an older AM/FM Radio; will find them
selves Listening to American AM/MW Radio Broadcasts from
across the border in the USA. - consider the possibility ~ RHF

That is a standard silicon power supply diode with something like .6 -
.7 volts forward voltage drop. The Schottky would be at least half that
and many are more like .25 volt.

If you don't bias the diodes into their linear range then it takes
signal power just to turn them on/off and that's where some of the
distortion comes from and the non-linear area contributes as well so the
smaller Schottky is an advantage.

> acceptance.

That is exactly what will be the make-or-break as to AM. FM is healthy. It
will become healthier with HD 2 channels. It can potentially drage AM back
into the game. This is why none of the big operators has sold a viable AM in
years... all believe the value will be enhanced by HD. That is a
many-billion-dollar gamble.

>So, as with most radio techological innovations, it's going to have to be
>in the cars in order to expose that captive audience to a fair hearing of
>HD-AM for an interest to be generated. (This, despite the fact that a

>have to actively pursue an HD experience without current regular AM
>usage...I'm not seeing it.

Cars are where Americans are forced to get a new radio. Obviously, there is
a trickle down aspect, as not everyone buys new cars (ever) and not everyone
buys a new car every year or two. But this is the opportunity for AM. It is
not an overnighter, but the band is fading, not exploding.

> to come.

We are years away from being able to evaluate listener response, which will be based on product demand. But the few reports that have started coming in are favorable. On the FM side, we put a Tejano format on last week ont he KLTN HD2 channel, and we have registered several hundred calls (the format is on a marginal AM as well) asking about how to buy radios and all were very excited. This, perhaps and even hopefully will rub off on AM.

Huh? We are trying to preserve the value of tens of billions of dollars worth of AM stations by keeping them viable for longer.

> It is extremely distasteful, and sad. You
> obviously get some sort of 'kick' out of visiting this group, saying
> bizarre things, deriding the interests of others and just generally
> shitting where other people live.

The facts are that 1) I did not invent HD, 2) I had nothing to do with its FCC approval and, 3) never thought it was the best system.

However, it is _the_ system and only system because AM does not have the time for a different one and because any system that is not on the same chip as the FM digital system will fail automatically.

This is how AM radio in the Western Hemisphere and, probably, Asia is going to be. If you think reality is in disagreement with your interests, don't blame me. Go see a psychiatrist.

> Do you ever wonder why? Why do you
> derive more satisfaction out of putting other people down than from
> pursing interests of your own? Might be worth a moment's reflection.
>

Putting down? Do you have any inkling of how fast AM is losing its economic viability in the USA? Most of the listeners are over 55, a group no large advertiser buys, and the younger demos are shrinking each year as the average age of AM listeners goes up. HD is as good as we are going to get to have a second chance on keeping AM viable.

And did I forget to mention... in the Spanish / Portuguese equivalent of Radio World, several of the Brazilian operators were quoted as considering HD for domestic Short Wave.

You might want me to blame me for that, too.

In one word, this will not work: DIGITAL

C-Quam was tried and failed in the mid 80's. Any system that does not come
on the same chip as the FM digital system will also fail. Any system that is
not digital will fail at the marketing stage.

> I don't know where you are coming from on this. I grew up listening to
> FM and AM and I think AMBCB sounds just fine.

The fact that you are on this group means you are not an average listener.

I have posted data from a variety of US markets, as well as national
averages. Again: in 12-34 year old listeners, in LA, the total share for AM
is less than the indvidual station shares for the 6 highest rated FMs. 6%.
Nearly nobody. AM may sound good to you, but to nearly everyone under 45, it
is presently irrelevant and sucks.

> AMBCB has good fidelity

> Generally I listen to AMBCB, short wave, and spend time on the Internet
> for news.

The problem is just that. Only talk shows and such get on AM, because
anything else that requires fidelty will not work. Talk appeals to a very
old audience, and in many cases, it is getting harder and harder to sell.
>
> This is what is bothering me about the move to HD. The move is supposed

DRM is an effort to make SW relevant, just as HD is for MW, to newer generations that are looking for digital quality (in developed nations) and at least FM quality in others.

Even when music is available on FM, such as Mexico (loads of music stations still there) the younger audience does not listen. In fact, FM listening in Mexico is higher than that of the US! It is nearly all about quality of the sound, not the programming... because most Mexican cities have more viable AM signals than US cities do.

Considering that what is available on any signal that would get into most
Canadian cities would be very American talk, I doubt this would have much
appeal. The CBC has FM repeaters all over Canada, and there is no lack of
big FMs, either. Listening to US AM stations is something that is unlikely.

The question should be: "Are there still Militialoons and
Pay-triots out there who still buy these things?"
We had two PAY-triot kooks living in our town that I knew of.
One of 'em purchased a whole bunch of GROSSLY OVERPRICED
gold numismatic coins, storable dry food and water jugs along
with other useless crap prior to Y2K thinking the world would end
on Jan 01 2000 when all the computers stopped working.
He ended up having his house sold at Sheriff Sale due to non-payment
of taxes and default on his mortgauge in 2002. The other guy was
caught selling meth from a lab he had in his garage and has not
been seen since he went to jail and his live-in and 3 feral kids
are someplace in AZ no doubt on welfare on some reservation or
some other shithole part of town. Yup! Gotta love these shortwave
radio listening kooks, froot-loops and loons.

Makes you wonder why they call it the "Great" liberty net. Course' for every
right toon there is a leftist toon character in the wings waiting to whine.

gee, try a couple of places like this:
CERT
Security Threat Watch

btw, just because the "hackers" aren't talking, doesn't mean anything other
than they don't consider it important..

taking a look in securitydot.com, the only exploit they list is for a
bttracker exploit in february of 2004!

a secuinia advisory relating to emule was released in mid 2005 and affected
only emule clients (causing a client crash) (secunia advisory: SA16239)

bugtraq reports a companion bug in bnbt trackers as of may 20, 2004. nothing
more recent than that when it comes to bittorrent clients.

BtitTracker is not a standard torrent tracker package (and this one is new).
it requires a specified version having been installed (version 1.3.2) and
the exploit uses a web browser to inject a malformed packet to cause a
php-sql injection problem. this is actually a defect in the php-sql code

and only relates to this one specific kind of tracker (which is not in as wide a use as the package from bittorrent.com)

real bittorrent uses python (a scripting language) and has nothing to do with php (another scripting language) or sql (a database).

perhaps you need to read up some more?

I'm pretty sure that "putting down" refers to the interests of folks in
this newsgroup. You might want to read the next post you reply to. That
said, HD does not even promise to keep AM viable. It is simply an
alternative form of death. Face this simple fact and pull your fat
little head out of the sand.

>
> And did I forget to mention... in the Spanish / Portuguese equivalent of

Is this our fault? We didn't invent HD and we have done absolutely
nothing to promote it. If several Brazilian operators are considering
HD for domestic Short Wave, that is entirely their responsibility from
beginning to end. They did not consult us.

>
> You might want me to blame me for that, too.

The only thing I would blame you for is trolling this newsgroup,
period.

Well, of course it's a vicious circle. Most everything in Radio is.
You remember how tough it is to get hired until you have experience, but
you can't get experience until you get hired. Vicious circles in Radio
aren't news. But the fact remains.

That said, it's content that drives listening. If the content is of
no interest to the target, HD isn't going to help. What's not
happening, is there's no change in content to accompany HD
implementation. WGN didn't change content when HD was installed. And I'm
sure that Ace will point out that WBBM's content is the same as before
HD was installed. So, HD is only really benefitting those who are
already using AM. And those younger demos you wish to attract with audio
quality, will be just as unintersted in the content after HD, as the
stations themselves are in those who listen outside of the city grade
contour.

>> The only potential uptick I see is in those auto systems where HD is

> years... all believe the value will be enhanced by HD. That is a
> many-billion-dollar gamble.

That's exactly my point...it's a gamble. A crap shoot. Targeting the
superficiality and subjective perception of audio quality. While the

real attraction to listening is content.

You've noted growth at your AM's on the West Coast. Those are due to content, not audio quality. And your growth has exceeded expectations. Whether HD has been implemented or not, HD's 'improved' audio quality is not a factor, since receiving hardware is both expensive and not widely available. In fact, your share increase would exceed the number of HD radios sold in those markets were explosive growth has taken place. IF HD audio is not a factor, it's the content that's attracting listeners. In under 45 demo's at that.

However, HD is putting that content off limits to potential listeners, by trashing the bands in weak signal areas with other station's HD rash. If noise and audio quality are, indeed, factors keeping AM from stable growth, or at least stable levels of listenership, increasing noise found in HD sidebands is not going to be a viable solution.

Then, again, if audio quality is really an issue, that same Tejano format on HD2, since HD radios must resolve both AM and FM HD, will present an attraction of listeners away from the AM station, even if listening is done in AM HD.

So, the net advantage to AM, here is zero where the same content is available on FM, analog or digital.

As you said, that makes AM HD an enormous gamble. And an expensive buy-in to the game.

That's right, let's "save" AM by making it indistinguishable from FM.
There could even be a little marketing campaign oriented around a "Come
listen to us because we're just like FM now" theme. LOL! I'll give AM
about six months once that happens.

Ah yes, DRM....talk about people who refuse to face reality! I'm
surprised you'd put HD into the same category as DRM, but I do think
it's apt. It's sad...I guess they just can't read the writing on the
wall.

I don't listen very much to WBBM, but on the occasions that I do, you are correct in that I have noted no change in their content.

What I do notice without fail is that when they have their HD/IBOC up and running is the total annihilation of at least two adjacent channels.

Such a wonderful system, it seems to me, will only force more listeners away from the MW bands.

The potential to drive those of us who tune around at night (or currently during the daytime) looking for alternative voices from outside our 'local' market or 'area' off the band for good does not seem to be a productive use of this resource.

I am not sure if the capacitance of the power diodes would be too high. This could cause poor isolation, but if you reverse bias the unused filter diodes, they might work.

Pete

It's true! Right about that time he ceased being David_Gleason and became David Eduardo on the net.

Now he claims to have been baptized 'Eduardo' in 1947, up in Cleveland, Ohio. He was born David Frackelton Gleason in 1946.

One wonders why, when he spent so much time in Mexico, Ecuador, San Juan, etc., he did not use the 'Eduardo' shtick at that time? He had business cards printed, signed letters to listeners, was on HCJB, had his name in radio publications, both professional and hobby (most often appearing as David Gleason and at times as David F. Gleason) and NEVER once does the name 'Eduardo' ever come up.

If one looks at his resume page, one very telling item is his mothers death notice which appears to be dated 1997 which lists her survivors as:

Carolyn G. Oberndorf, David Gleason, H. Lansing Vail, Thomas V. H. Vail, Jane Vaughn and Stanton K. Gleason.

Wonder why David didn't at least get an F. tossed in there, let alone an E. F.? At least his stepbrother got the V. H. put in.

Bottom line, he certainly is a Frackelton, but he sure as hell isn't an 'Eduardo', at least until right around the year 2000 when he adopted that shtick, apparently right around the time he discovered that he could check off a box on the Census form and become an instant Hispanic.

Most likely somehow all related to his business activities.

Hmmm. That is interesting. I also noticed that in 2004 in San Diego he participated in a panel discussion about the future of radio as "David Gleason". A link is here:

http://tinyurl.com/l7mr8

He's obviously got some kind of scam going.

Also, I don't know whether this has been posted before, but the following might explain why Tardo wants to disrupt the activities of RRS. Turns out he just plain old doesn't like DXers and "took his Drake to the dumpster" out of disgust:

****
****

KTNQ is no longer testing. IBOC is on 6 A to 6 P permanently. We believe it may be the only one on the West Coast in regular operation (David Gleason, Univisi?n Radio, ibid.)

So, did you guys forget to notify the FCC of your IBOC operation? Notification is supposed to take place within 10 days from your startup date (Barry McLarnon, VE3JF, Ottawa, ON, ibid.)

The FCC list is hardly complete. It is missing several hundred stations that have notified of intent and are installing now. Just in my company, there are 16 stations installing the gear and several already running; they were among the original Ibiquity signers. I'd say that the FCC is simply not paying much attention to the list (Gleason, ibid.)

I'm sure they don't care about intent, or who's signed up with Ibiquity, but you DO have to formally notify them soon after you actually start transmitting IBOC. If you don't, then I'd say you are operating illegally. Of course, that doesn't seem to matter much these days (Barry McLarnon, VE3JF, Ottawa, ON, ibid.)

Barry, KTNQ has done all the necessary notifications. Our company has never been fined or cited for a major violation. Suggesting we are operating incorrectly without first checking is personally, professionally and morally of the highest offense. It's rude, Barry, and insensitive to a company that has 1,500 employees and probably does more service to its communities than any other broadcast company I know of on this planet.

Yes, I am pissed. And really offended.

Why the hell do you and some other DXers think that every radio station in the US is operating illegally and incompetently.

[whining jag clipped]

This kind of crap is enough to make me take the Drake to the dumpster and forget about DXing. And you wonder why stations don't answer reports anymore --- several of the supposed DXers on this group have enough misguided venom to turn off any broadcaster. Most of us are professions, responsible and dedicated. There are over 100 thousand people working in radio. Nearly none of them are dishonest and deceitful.

KTNQ had its paperwork for IBOC in order, as it does on every legal and technical matter, long before you started speculating and pointing your finger.

I first became an NRC member in 1958. After this insult, 2003 will be my last if I can get a refund for my remaining months.

And --- you should have seen this message _before_ I edited it (David Gleason, ibid.)

[snip]

I hope David and Barry can get over what seems to be a pretty mild misunderstanding. I, for one, value both David's industry insight and Barry's outstanding DX skills, and I'd hate to lose either of them on this list or in the club (or at the convention this fall!!!) s (Scott Fybush, NY, ibid.)

The tone of the Barry-gram was simply so dismissive and rude, that I am disposing of the Drake, already wrote to NRC to cancel membership and am out of here. This is like being a conservative at the annual Marx-Engels Awards (Gleason, ibid.)

I would urge that this thread be terminated (NRC-AM Moderator, ibid.)

****
****

It looks like Tardo never really got this tantrum out of his system and is now taking it out on RRS. Talk about a prima donna!

It's also interesting that, on his website, Tardo represents himself as "Executive Vice President of Univision Radio's research and programming division". However, if you look at the page promoting the NAB conference in San Diego in 2004

http://tinyurl.com/rzgea

he's "president of programming at Univision Radio". Either Tardo was demoted since 2004 or he isn't able to keep his story straight. Interesting.

Yes, I had read that previously but had forgotten about the Drake comment.

Sacrilege!

Oh yeah, he has indicated to me that he currently has a Drake R8B and two R75's.

So I wonder if he ever actually disposed of the Drake, or whether that was yet more of Edweenies BS?

OK, my first instinct said the FCC was getting lobbyed to maintain the
status quo by the local stations.

So what was motivating the FCC?

> >

"Everyone wants to operate at night", "nobody did want to operate at night".

Whichever. It's hard to say the FCC was doing anybody any favors by
allowing expanded nighttime operation.

And the broadcast industry pros didn't know what to do with FM, either.

too
> full of problems and could put the license in jeopardy.

OK, the issue of editorializing on public radio stations came up before the
Supreme Court in 1984.

A quote from the decision:

"Indeed, the pivotal importance of editorializing as a means of satisfying
the public's interest in receiving a wide variety of ideas and views through

the medium of broadcasting has long been recognized by the FCC; the Commission has for the past 35 years actively encouraged commercial broadcast licensees to include editorials on public affairs in their programming."

And the footnote on the quote:

"[Footnote 14] In 1949, finding that "programs in which the licensee's personal opinions are expressed are [not] intrinsically more or less subject to abuse than any other program devoted to public issues," the FCC concluded that overt licensee editorializing, so long as "it is exercised in conformity with the paramount right of the public to hear a reasonably balanced presentation of all responsible viewpoints" is "consistent with the licensee's duty [468 U.S. 364, 383] to operate in the public interest." Editorializing by Broadcast Licensees, 13 F. C. C. 1246, 1253, 1258 (1949). At the time, of course, this decision applied with equal force to both noncommercial educational licensees and commercial stations. The FCC has since underscored its view that editorializing by broadcast licensees serves the public interest by identifying editorial programming as one of 14 "major elements usually necessary to meet the public interest, needs and desires of the community." FCC Programming Statement, 25 Fed. Reg. 7295 (1960). The Commission has regularly enforced this policy by considering a licensee's editorializing practices in license renewal proceedings. See, e. g., Greater Boston Television Corp. v. FCC, 143 U.S. App. D.C. 383, 402, 444 F.2d 841, 860 (1970); Evening Star Broadcasting Co., 27 F. C. C. 2d 316, 332 (1971); RKO General, Inc., 44 F. C. C. 2d 149, 219 (1969). "

I know I sure heard alot of editorals on the radio and almost as many editorial replies. They were particularly prevalent on WBBM.

>

Yeah, and the programming is more interesting for it. And I haven't heard a stand alone radio editorial in years.

From alt.politics.immigration on June 28 2006:

"I own two of them [referring to the R75's]. Also a Drake and a TenTec."

I seem to recall him saying the Drake was an R8B, but have not yet found that quote.

Oh, my. This is serious. And since all the AM listeners are projected to become FM listeners, the ad money will similiarly go the FM stations. Will the FM stations be able to hire some of the current AM workers? Not if those AM workers die with AM radio, they won't.

And those poor investors? Well, if they're looking ahead, they'll be selling Clear Channel and buying -- oh, I dunno -- maybe Clear Channel.

There is no way to make a quick buck in radio. If you know how, please
illuminate us. Otherwise, do what you keep telling me to do: stuff it. Your
defense for soing nothing is based on a total lack of facts, no alternate
plan, no alternatives. You just criticize what is being done, yet have no
suggestions... just invective.

Since HD does not interfere with existing AM listening in analog, try
explaining this one, too.

Proof? This is like saying in 1960 that FM stereo will kill FM. Existing
receivers are compatible, and those with new receivers get a better quality.

The losers: an tiny handful of DXers on AM, and a very few listeners to
distant signals. The DXers will adapt (just as they did to 24/7 schedules in
the 50's and 60's) and the distant "regulars" will have to go to satellite,
streaming, etc.

It does interfere with existing AM listening, nutsack. Maybe you should
actually turn on a radio one of these days. You've apparently never
heard one.

A tiny handful of people who appear to have you worried enough to keep coming back to this group again and again and again. You sure seem preoccupied with this unimportant group.

But, until there are receivers out there... nobody is going to cange much in
a succesful (still) format. The changes will come in second tier formats, I
think... and in modifications of existing ones to broaden them. WGN has to
change, as it is in a revenue death spin, and is hurting the Trib's stock
price single handed.
>
>
> That's exactly my point...it's a gamble. A crap shoot. Targeting the

No station today will do a youjnger A format. There is still time to adapt
as HD gets into user hands. This is a 5 year issue. Keep in mind that
satellite has talken 5 years to get to around 11 million subscribers. Of
course, this is a poor analogy as satellite seems to have hit a wall... and
may truly never be viable financially.
>
> You've noted growth at your AM's on the West Coast. Those are due to
> content, not audio quality. And your growth has exceeded expectations.

But the growth is in existing older formats on stations that were not doing
well, like KLOK. Its a stop-gap until HD makes younger formats viable. Our
main Miami AM station has an average age of 72!

> Whether HD has been implemented or not, HD's 'improved' audio quality is

> at that.

Nope, It is all older, and we are talking about going form 0.4 to 0.6 in
some cases. Holding the water out of the fields by putting a finger in the
dike. Waiting for the chance that HD affords us.
>
> However, HD is putting that content off limits to potential listeners,

> If noise and audio quality are, indeed, factors keeping AM from stable
> growth, or at least stable levels of listenership, increasing noise found
> in HD sidebands is not going to be a viable solution.

None of the stations I have studied gets any real listening outside of its 5
mv/m signal area (and what there is is suspect... probably done in the car,
etc) and most is inside the 10 mv/m. In LA, nearly all our listening is
inside the 15 mv/m due to the high noise levels in this market.

We don't lose anything. In fact, the AM HD is useable farther than analog
due to analog noise.
>
> Then, again, if audio quality is really an issue, that same Tejano
> format on HD2, since HD radios must resolve both AM and FM HD, will
> present an attraction of listeners away from the AM station, even if
> listening is done in AM HD.

The AM will probably go away eventually. It is one of the AMs that shoud
never have existed. As long as we keep the audience, and expand it, we
really don't care what the delivery method is.

It's a gamble... but doing nothing is not an alternative.

It's a second given name. It does not help my professional activities, and
it was given to me decades ago. This is a mind fart of DXass.

Their North America signals (from WYFR facilities) have always been
excellent here in California. I wonder if it is regular practice for
them to use monitors, or if they will be changing their broadcasting
methods in the near future.

... because I have been over it with DXass over and over again. Eduardo is
my baptismal given name. Like adding "Bob" to "Billy."

Pretty simple. I post with my first names, just as you post with your first
name.

The difference is that we have no idea who you are, and I do not hide my
full identity.

That no ratings or revenue can be derived from, and outside the local
service area of all stations ocncerned.
>
> Such a wonderful system, it seems to me, will only force more listeners

The only useful listeners to the business model are in the metro areas. Or
primary service areas of rural stations.
>

Listeners like you are not of any "value" to the local market. Since ratings
show listening to stations by location, your listening to DX does not help
the distant station... since your listening shows up in Grand Rapids, not in
the home market to the station.

I did not care for the very long name much in earlier times. I simply
decided it was neat for the web, and now I use it frequently elsewhere. As I
said, always been on my personal documents.

What difference does it make?

The V.H. is for "Van Heusen" which is a single name. And who knows how reporters do obituaries (it is not called a "death notice, you fool). They don't give the proof to the heirs to check (even if Tom Vail was the publisher of the paper at the time). My sister's name should be Caroline C. G. Oberndorg, too... so what?

Actually, again, as I have told you, in the 1990 Census in Puerto Rico, the census takers filled out the race and Hispanic questions themselves based on observation, as most forms were done door to door there. So I never filled in anything. The Hispanic question has been on every Census questionnaire since 1980, by the way.

How so? I have 4 names. Two first names, a middle name which is also my
maternal surname, and a last n ame, which is my paternal surname. Simple.

I gave away the Drake I had in LA, keeping the Ten Tec in Prescott and the R-75 in the Desert. I added a newer R8B later, as I got the bug for DXing Mexican AMs again. I also gave away an NRD 525 to an NRC member who was retired and needed a good radio.

I seem to recall reading that some of the 1N400X series have a structure
like PIN diodes, I think some of the higher voltage ones. This has been
stated in various places, though I have no idea about whether it's a valid
solution for this specific receiver.

3695. FM Radio Rant ....

Newsgroup: rec.radio.shortwave
Date: 2006-07-23 16:24:12 UTC
From: "<RJ>" <baranick@localnet.com>
Message-ID: <gd87c2til8co4pjshb07d9kh5v36olnc9r@4ax.com>
Source record: 84831

My "bookshelf stereo" cost a couple hundred bucks.
On a good day, with antenna, I get maybe four FM stations.

On a recent trip to a casino, I got a souvenir pocket radio.
(probably costs less than a buck)
and I get (FM) stations all across the dial !

It ain't fair !

<rj>

> So what was motivating the FCC?

The motive was a belief in the concept that local media reinforces the
Republic. No kidding... there were frequent references to things like this
back in that era. It was believed local voices were important. I think the
FCC used the newspaper model for localism, not undetrstanding that
newspapers are restricted by distribution, not localism.

But the fact is, due to the restrictions and potential for litigation,
fines, protests, nearly no station did editorialize until later that decade
when Fariness was revoked.

> RKO General, Inc., 44 F. C. C. 2d 149, 219 (1969). "

Still, nearly nlo station editorialized in the 50's, 60's and 70's. All they needed to do is look at Red Lion to see how editorials can lose the licence. I do not remember a single station that editorialized in that period, and it was out of fear. There were plenty of other ways to get the license renewed. like keeping the commercial locad below 18 minutes, running PSA,s etc., that one did not hve to jump in the fire on editorials.
>>

A very big station... one of the top 10 reevenue producers in the USA, in fact.
>
> Yeah, and the programming is more interesting for it. And I haven't heard
> a
> stand alone radio editorial in years.

Most radio stations research. we find that the interest in editorials is about the same as among under-55 readers of the newspaper... nearly none. It is a tune out, and there is so much opinion available today, it is not needed.

It's supposed to be the higher voltage parts in that series, (the 1N4007).

>Whatever happened to all those Schottky Diode mods that seemed to be the rage
>years ago? Would this be something similar?

Semiconductor-wise, they're pretty much the opposite.

A Schottky diode uses only one type of semiconductor and the junction
is silicon-metal. (The modern version of a cat's wisker detector).
Their feature is that they don't store a cloud of electrons or holes
inside their junction so that they don't have a feature called "reverse
recovery". (Executive summary, they don't look like a short circuit for
a few nanoseconds when the current switches direction). Reverse recovery
causes all sort of problems in switching power supplies, and is also
the cause of RFI from regular old transformer/rectifier power supplies.

A PIN diode uses both P and N type doping in the junction, but in
addition there is a layer of Intrinsic (neutrally doped) silicon
in the middle. This causes a bunch of stored charge to hang around
in the middle of the junction, so that for high frequencies it doesn't
look like a diode anymore. They're used for switches by forward
biasing them to turn them on, or when reverse biased the stored
charge eventually gets swept out of the junction and they look like
an open circuit (or really, a capacitor). As I understand it,
there's a tradeoff between storage time (and switching speed) and
capacitance. The designer would like as much storage time (sets the
low frequency response) and the minimum capacitance.

Are they different stations up and down the dials, or is it overloading
so the same station appears in multiple places?

This is one of the myths of "expensive stereos". People pay good money
for them, and assume they will have good radios in them. But they are
buying more than a radio (depending on what's included, a cassette deck
a CD player, flashing lights graphic equalizer, a higher power amplifier,
etc). The radio may not even be seen as important, something to put
in but with the knowledge that few will use it and even fewer will care
about anything but a handful of stations.

Under those conditions, why should they allocate money into the design
and construction of a good radio, especially when there are things
that the buyer would find more appealing?

The same myth applies to a shortwave radio that happens to include
an FM section. Too many beleive that since it's an expensive radio,
that will be reflected in the FM section. But, the circuitry doesn't
overlap, the FM section requires a whole extra radio in there, and
the people wanting it want it for local reception. So they add it
in because it will increase sales, but don't spend too much on
the section because that will take away from the main feature, the
shortwave reception.

Michael

Yeah, people do sometimes just 'decide' that it's time to use a
different name. They usually 'decide' this when they're up to something
and want to deceive others about who they are.

Now that I think of it Michael is correct. It was the 1N4007, the 1 kV version of this slow diode that was recommended. It would tend to have lower junction capacitance because of the wider depletion region due to the heavier doping for the high voltage standoff. Once the diode is biased on dc wise, the forward drop is not significant because it doesn't "switch" with the signal current. I think the trend to Schottky diodes was because of the lower intrinsic capacitance.

Frank

It does not destroy anything that is commonly being used. Therefore, if the bandwidth can be used productively for something else, there is no loss.

As I suspected. You have no solution, just criticism of those who are
willing to try something, anything, to save AM.

It does not interfere with anythjing that is bieng listened to by a
measurable segment of the population.

If a supermarket puts licorice flavored ocoffee on the shelves, but it only
moves 2 jars a month, they will use that shelf space for something more
people come to buy.

Nope. It is just an interesting debate. HD is already on the air on 1000 stations, and another 1000 will come this next year. Nothing is stopping HD. The real issue now is whether any thing, HD included, can save AM.

That is an even worse business model. There is some doubt that satellite
will be profitable before WiMax makes it obsolete, with better reception in
the long run... especially in home and at work, where satellite is a frail
contender.

Each company has only one President. Nobody has a "President of Programming.
" None. It was simply an error. The NAB program each year has dozens of
similar inoffensive errors, like wrong titles or misspelled names or wrong
call letters.

The person I gave the 525 to had a long history of serving the NRC, as an
editor, contributor and fine DXer. He prepared the most extensive list of
Mexican AMs known, and was in radio and print as a professional all his
life. Unlike you, he deserved the radio.

That one is pretty obvious. No broadcaster has a president of programming.
The President is the COO or CEO, only. There are not two presidents.
```

There are better switching diodes than the 1N4007, though they are more expensive and less commonly available. It's not a bad switching diode for RF if you don't have anything else handy. If I'm not mistaken, Ulrich Rhode wrote an article in QST some years back about the use of such diodes in high performance receiver designs. His opinion was that although cheap, the 1N4007 didn't have a place in higher performance designs.

Spiral concentric or coil will change the pattern but since the antenna
is so electrically small it won't make much difference unless you want
to use the nulls. I would expect that a coil wound would be best. I you
are concerned about using a null in the antenna pattern then go one turn.

At least one PBS-affiliated DTV station is doing just that, carrying the
audio of an associated radio station.

There really doesn't need to be any video at all. The ATSC protocol
treats audio and video as separate streams; a mapping table tells the TV
receiver to pluck the video stream on protocol ID 0x0044 and the audio
stream on 0x0041 and combine them into a TV program called channel 4-1.
There is nothing that requires the 0x0044 video stream to exist - you
could transmit *only* the audio stream. How a typical ATSC TV would
handle that I don't know; my bet would be that it would show a blank
screen. (while playing the audio normally)

So, WGN is waiting for receivers to fall into listeners' hands
before lowering their demo target? Once sampled, if the audio quality
is attractive but the content hasn't changed, there will likely not be a
resampling. Leaving HD to benefit those who already listen and enjoy.
But not providing anything more attractive than audio quality for those
who generally do not. If audio quality were the only selling point to
KEZK, it would still be Schulke. And WRTH would have never been
'Beautiful Music.' It's the content that attracted and held listeners to
each. Granted this is in an era when FM still had novelty listening, but
the point is, when the audience began to shift from AM to FM, it was the
content on the stations of either band that changed to create viable
audiences...audio quality was only a factor where content requiring
audio quality was concerned. Music went to FM, where off main music
formats and talk took over AM.

And this was also at a time when AM was still wideband. On my McKay,
an well done AM station could hold its own against an FM station without
breathing hard. Even doing music. This was Leonard Kahn's sacred
evangel: that AM is capable of the same, if not better audio, than
native FM. That is to say, without the pre/de-emphasis that gives FM

it's lower noise figure. Without that, audio quality of FM sux.

NRSC, in it's infinite wisdom, however, institutionalized what
receiver manufacturers had been doing by being cheap....cutting off the
top end of AM receivers and narrowing the audio bandwidth. As late as
1972, a stock Delco AM radio was capable of 8khz audio out that bottom
heavy dashboard speaker. With a different speaker installed, that same
Delco radio was capable of surprising fidelity. This was, of course
before AM Optimod and CRL brought new meaning to the term 'grunge'. What
NRSC did, was start the process of reducing skywave interference by
attacking audio bandwidth...and at the same time audio quality. The
10Khz brickwall plus the pre/de-emphasis of NRSC II helped create the
suckular AM quality we enjoy today.

Shortsighted stopgap measures often require additional shortsighted
stopgap measures to fix the side effects of other shortsighted stopgap
measures...and before you're two generations out, you've created a mess
that can be only remedied by starting over or giving up.

IBOC is the latest in shortsighted stopgap measures. Giving up is next.

>> That's exactly my point...it's a gamble. A crap shoot. Targeting the

And yet, you yourself have admitted that AM may not have 5 years
to make it. The deathknell may sound before that. So, with time of the
essence, content change must begin quickly, or the losses due to IBOC
rash and stagnant content of sampled HD quality may be irretrievable.

> $149 car radio this week. 6 others, from the Tivoli on down were announced.

Announced is one thing. Available is another. And the announcements are for products a month and a half or more out. With IBOC rash trashing listening in my area for more than a year, now listeners--the ones in my neighborhood that I can directly observe the listening habits of--have moved to other outlets. Most of them iPod. With a few to satellite. The rest have moved to FM.

My own listening habits have been dramatically altered. I'm listening, now, to stations I did bother with before. Offering dramatically different programming than I previously could enjoy on AM. Instead of talk, during the day, I listen to Jazz. Or Classical. Or something eclectic on XM.

AM-HD has been trashing the bands here for quite awhile now. And with local AMs being covered by IBOC rash listening has been difficult at the very best. The announcement of a $149 solution soon to come is way too little, way too late. No one that I know is going to wait for solutions to problems that are ongoing, and when the problems first appeared, there were no solutions in sight. The time to introduce those radios was a year ago, when IBOC rash first started to smother parts of the locally used spectrum.

A mere announcement now...well, if you wanted to turn over the entire audience in a short time, this would be the way to do it.

>
>> In fact, your share increase would exceed the number of HD radios sold in

> some cases. Holding the water out of the fields by putting a finger in the
> dike. Waiting for the chance that HD affords us.

Then, you're making my point for me. AM-HD is going to benefit only existing listeners. IN the meantime, trashing the band audibly as any potential listeners sample content only underscored that FM is a better option for them. Younger, or older.

>> However, HD is putting that content off limits to potential listeners,
>> by trashing the bands in weak signal areas with other station's HD rash.

> inside the 15 mv/m due to the high noise levels in this market.

When I say that HD puts content off limits to potential listeners, I'm not referring to those listeners outside of a market. I'm talking

about listeners inside the market who are not graced with a city grade signal. WLS, the classic example here, does not put 15mv/m into Lake County. But listenership is, or at least was, quite high in Lake County. But with IBOC rash now sizzling up and down the dial, WLS has been very difficult to capture cleanly. Or on some days, listen to at all. We're not talking about DXing...we're talking about local listening. That's been put off limits by IBOC rash, and yet, solutions have not been widely available.

Cutting off two of the more populous counties in the Chicagoland area is not a show of wisdom when you're goal is to save the AM band from long term exodus. Especially when solutions are only 'announced' and not widely available.

>
> We don't lose anything. In fact, the AM HD is useable farther than analog
> due to analog noise.

Which may be true. But only if the solutions are widely available. Which, they are not. And haven't been for at least the last year as the noise level has steadily grown to eventually cut off some the rated areas of the metro from their favorite stations.

>> Then, again, if audio quality is really an issue, that same Tejano

Doing nothing may not be an alternative, but it may be better than doing something that produces more immediate harm than potential long term good.

There has to be a better way. But it would take FCC reversing themselves. And we all know how likely that would be.

< Snip >

That's not my experience. Up until 1985 all I could get was the liberal
point of view on both AM and FM. I always wanted to listen to talk radio
but got turned off by BS that would range center to left. The people on
the left wing shows sucked cutting off anyone that has a conservative
point of view so I stopped listening until there were alternatives. Left
wing talk was on the FM mostly before I noticed other points of view on
AM. FM is still left wing with the PBS stations.

I don't think it is the sound as much as FM is in stereo.

> The problem is just that. Only talk shows and such get on AM, because

There are a number of AM stations playing music but I don't listen to
them. There are news stations like KNS besides the talkers.

DRM is a way just like IBOC for the broadcasters to gain more control
over the listeners. I expect that digital modes on the AM and FM will
change to a subscription service. It will start with only some channels
being a premium service and the rest free advertiser supported but
eventually all will be subscription.

There's no question that the 1N400X series is a poor switching diode when it comes to speed and reverse recovery characteristics, however, for switching in and out bandpass filters I think the reverse bias junction capacitance is the major issue to prevent unwanted signal coupling. I would definitely look for true PIN diodes if I were upgrading the filter switching diodes rather than use 1N4007s. It's just interesting that there have been articles on the fact that they appear to work reasonably well in some cases. I know the Kenwood R-2000 I had used the equivalent of 1N914s for these diodes in the front end and they were horrible with all kinds of cross talk from stronger, out of band signals.

La Voix du Sahel in Niger has returned recently to 9705v. Heard here at 1930-2000 in French. Tried to determine if they had English on Sundays at 2000 as reportedly shown in WRTH but was unable to check due to WYFR sign on in presumed Arabic at 2000 via Julich.

By the way, Niger was last reported on in 2003, also on 9705v. At one time they were also active on 5020.

The R2000 uses BA282 band filter switch diodes.

The RX Unit (X55-1340-00) in the R2000 sevice manual gives the
part number, which I just verified by looking at the stock diodes
that I saved when I upgraded both of my R2000s.

See <http://www.vishay.com/diodes/list/product-85526/>

For the 6MHz and 9MHz bands, good HP PINs give a slight but
noticable improvement. I expected a big improvement in the below
500KHz range but found nothing that I could hear.

I still lurk and will make the odd post when I have something usefull
to add. All prior Email accounts are abandoned and dead.

Terry

It's the usual bad 'lytics, as detailed on my 7600 page. Those early SMD
things must have been pretty crappy. Basically as long as they haven't
leaked and corroded the PCB, this problem is fixable, if a bit of a
pain.

The best portable this size for SSB certainly is the ICF-SW7600GR, as it
has sideband-selectable SSB. Its AM audio, however, should be similarly
depressingly muffled as the 7600G's, and speaker audio almost as
bassless. Were the SW7600 not plagued with the bad caps, it would be a
really decent rig. If you're seriously into SSB stuff, I would suggest
to get a full-blown communications rx.

Even if the price goes up another $750, and the buyer had to send it
back for factory service to correct any undocumented problems, the buyer
would still come out ahead on this.

Yep, that's what I figure. There was another that popped up briefly today for sale with a starting price of something
like $3700, but rather rapidly withdrawn I suppose when the seller may have discovered this current auction going on.

Now what happens if you bring a decent FM tuner (an average 4-ganger
with 3 IF filters should do), the humble Radio Shack 6-element yagi and
possibly a rotor into the equation?

> Are they different stations up and down the dials, or is it overloading

Good point. I wouldn't expect ultra-simple scan radios to have much
front-end tracking.

That's also partly true... the current Degens and Tecsuns do seem to put
some emphasis on FM (e.g. DE1103/E5), but Sony has been selling 7600s

with 280 kHz barn doors for ages now (at least they still have two, the simpler stuff has to make do with one FM IF filter and no IFT *ouch*) where 180s would cost insignificantly more and give *much* better selectivity. If you want to take a look at a simple but effective FM receiver concept, the service manual of the Grundig Sonoclock 900 clock radio to be found on the web should be interesting. Something analog built around a CXA1019S (all mono) shouldn't be too outlandish, but they put in nothing less than two 150 kHz filters. (I should have one of these coming soon, btw. :)) Reportedly these Grundigs (typically FM only) have always been good performers, and when I look at the number of 11 tuned circuits in the very first ones around 1970 (later ones had 10, which still was the same as in contemporary Concert-Boys) I'm inclined to believe it. If you can find what seems to be a fairly fancy model of the past on the used market, do give it a try even if some are a bit funky looking. (Clock radios seem to be a bit out of fashion these days, all the better for collectors.)

Ace, how accurate do you find the WRTH these days? It's been many
years since I bought one, as it didn't appear to be up to the same
standards as when Jens Frost and Andy Sennitt were putting it together.

Oftentimes, it is the type of ferrite material used in the mixer baluns. Also, it could be that low Q caps are being used in the lower bands. I have both an NRD-515 and an NRD-91. Both of these receivers exhibit rolloff below 700kHz.
These comparisions are made, using a Drake R7, Palstar R30, Yaesu FRG-100, Icom R-75, Lowe HF150, HF-225, and HF-250. I did repair a Kenwood R-2000 a few years ago, and wondered if it had some sort of attenuation below 1.5MHz. I noticed this same characteristic with a Kenwood R-5000 and an AOR-3030.

Constant listening through headphones is no more damaging to your hearing than the same SPL (sound pressure level) from speakers on an FM radio (or any other source).

The problem with headphone damage is due to the fact that most people (kids) crank the volume up so loud you'd think their ears would bleed. That definitely causes damage! Listening on headphones at reasonable levels does not cause damage, but it can block outside noises somewhat (depending on the kind of headphones), so if you wish to be more mobile than when wearing headphones, or be able to hear other sounds in the environment, then that is the time to go with outside speakers or an FM transmitter...

So I'm looking for an FM transmitter that I can connect to
> the it that would allow me to listen to it through regular radio

Unless you specifically are in need of transmitting to an FM radio (or multiple radios) perhaps a set of decent computer speakers will do the job. I've used a set of powered speakers with subwoofer on a number of small devices with very good results.

a dress and let her hair down and she would be AOK.
> cuhulin

.....
I listen to the radio for the program content. If it is a good program, I would be glad to use two Dixie cups and a string held by seven of Cuhulin's vestal virgins to listen. I don't really care if the transmission is AM, CQUAM, IBOC, FM , or CW. If it is a good program (as defined by me) I will listen. Since my demographic does not appear on any profit maximizer's radar, most radio programming fits the "vast wasteland" of Newton Minow. (look him up) So, I hear you asking, "What do you listen to?"
..... 1. BBC internet. The range, depth, and variety of the BBC puts US and Canadian radio to shame. I have even switched to high-speed phone so that the telephone service will not be interfered with while I am listening.
...... 2. CBC The CBC is mostly on FM now, but new management has switched to youth-oriented programming which I find of little interest. Too bad it's as clear as a bell.
.... 3. night-time skip. If I can't sleep in my little trundle bed, I see what I can find to listen to via the ionosphere. Coast-to- Coast is often interesting but fading is a problem. If they are doing a program on lost civilizations (I love this stull) that I want to hear without interruption I switch on the laptop and go to KLIF (among others). If Art and Co. are slogging through the causes, beginnings and effects of everything in the universe, I turn to WLW 700 where the truckers won't strain my brain quite so much. I avoid sports radio: I have lived too long to get exited over some player's contract, although I will admit that the sports announcers have clear voices and mucho enthusism. They remind me of the old dictum," The main thing is sincerity, and if you can fake that, you've got it made."
..... 4. Daytime. some shortwave: Chuck Harder, the Power Hour, Alex Jones. However, reception is not good and they are constantly changing frequencies and times which is limiting listening time. Limbaugh and others of that ilk eventually become tedious and irritating. If I want to listen to a bunch of war for fun and profit neocons, I'll look up a KKK meeting and get some really good fidelity.
This whole debate about AM broadcast technology reminds me of two competing salesmen selling a machine to cut up a pile of horse manure. One wants to slice it and the other wants to dice it. And each can prove that theirs is the One True way. But when you are finished, it's still horse manure and I don't want it.

There are still good programs out there but you have to really dig
for them.

That's definitely a good point. They don't have the gonads to do much of anything other than smear someone. Of course, should you expect much more out of inbred white trash? I've actually found Canucks to be more informed than your average beer drinking yayhoo who is mentally challenged to even spell his own name. Then again, what else would you expect from a piece of white trash such as that.

You could always check out the ILG database for frequencies and times.
The WRTH is still a pretty good information source but you can expect
that in the case of major broadcasters to find that frequencies do
change. Now much of your stations in Africa, Latin America, Near East,
and Asia will still probably use the same frequencies they have for
years. I purchased a new copy of WRTH this year and found it to be
relatively decent despite some info that isn't always correct. It isnt
perfect but it suits my needs especially for 20 bucks.

I have a longwire already that came with my Sony 7600
but I'm thinking that getting a longer antenna will capture more
singal. Any recommendations?

Right now I've connected my longwire to the fireescape
however the end of the antenna is not metallic so im not sure
if this will imporve the signal since the longwire is not making
a contact with the escape.

> lowering their demo target?

I don't think they know how to change the demos on that one. This may be an
example of the casualties of very old leaning AMs. They will have to very
much remake the station for it to work for anyone.

> Once sampled, if the audio quality is attractive but the content hasn't
> changed, there will likely not be a resampling. Leaving HD to benefit
> those who already listen and enjoy.

I think once there are enough receivers, stations with very old profiles
will make changes, even at the risk of losing the big 12+ numbers. WGN
coiuld lose 60% of its audience, and yet not be any less salable today. They
will probably survey the under 55 listeners to see what they like and focus
there, killing the 55+ content.

Master AM programmer Gabe Hobbs, while at WFLA, instructed the hosts to address the elderly as, "are you one of those blue haired old ladies from..." or "sir, would you put your dentures in so we can understand you?" This essentially blew away the oldedr crowd, and was perceived as amusing by the younger listeners who then felt the station was "theirs." WGN will eventually have to do that.

> But not providing anything more attractive than audio quality for those
> who generally do not. If audio quality were the only selling point to
> KEZK, it would still be Schulke. And WRTH would have never been 'Beautiful
> Music.' It's the content that attracted and held listeners to each.

> quality was concerned. Music went to FM, where off main music formats and
> talk took over AM.

There were several qualities for youth. First, most FMs positioned as having less ocmmercials and less talk. Second, they emphasized the quality.

AM became solid talk more due to the repeal of the Fairness Doctrine than anything else. A few operators, like Randy Michaels, realized tha the "dead" band had life for talk for over-35 listeners.

In the early 70's, I put what was the 4th independent (not a spinn off from a simulcat FM) FM CHR on in Birmingham (First were WMYQ, WDRQ and KLSQ) and the biggest factors were the low commercial load and the quality. But I think success came as a product of both, not one or the other. The station hit #1 in its first year, too.
>
> And this was also at a time when AM was still wideband. On my McKay, an
> well done AM station could hold its own against an FM station without
> breathing hard. Even doing music.

It was also the era when cheap receivers deemphasized AM, and flooded the market. In PR in '75 and on, Grego Ogrinosky and I discovered adjusting one of the earliest tri-band audio processors using an assortment of radios from k-Mart.

If it sounded nice on my Dymek, I knew it was going to sound bad on the average radio.

> This was Leonard Kahn's sacred evangel: that AM is capable of the same, if
> not better audio, than native FM. That is to say, without the
> pre/de-emphasis that gives FM it's lower noise figure. Without that,
> audio quality of FM sux.

The problem is that Lenard cost AM the time advantage. In 1978, AM had nearly 60% of all lsiteneing. In 1982, it had less than 50%. It was already over. Today, only by riding on an FM based system on the same chip do we have any hope.

What I think will happen is that many second tier stations, ones that co ver just enough, but are not the top talker or sports staiton, will try formats that can be viable via HD. It will expand the raqnge of offerings, and make sush stations viable.

Keep in mind that most markets have only 3 or 4 viable AMs. Some, like DC, have none.

Just look at Chicago... 560, 670, 890, 780 are the only fully viable AMs for the metro. Then there are second tier ones, like 1000, 1160... and after that, nothing.

Phoenix has only 2. San Diego has 1. San Francisco has 3, Cleveland has, maybe 2. Miami has one. Atlanta has 1. St. Louis has two. All the other AMs are less than perfect coverage, or totally defective.
>

>> hit a wall... and may truly never be viable financially.

I think the marginal but potential stations will do new formats. Most of these are in the hands of larger companies, and they will. invest in the facilities.

> And yet, you yourself have admitted that AM may not have 5 years to
> make it. The deathknell may sound before that. So, with time of the
> essence, content change must begin quickly, or the losses due to IBOC rash
> and stagnant content of sampled HD quality may be irretrievable.

AM has the time between now and when so little of hte audience is under 55 that they are not viable as a business. That means that it starts getting difficult in 5 to 7 years, and horrible in 10. If FM HD succeeds, then it would drage AM along.
>>
>> But the growth is in existing older formats on stations that were not
>> doing well, like KLOK. Its a stop-gap until HD makes younger formats
>> viable. Our main Miami AM station has an average age of 72!
>
>
> Hold on...let me sit down with THAT shocker.

Look at WGN. Average age is 57 now. The heritage AMs are getting really old.

Our WAQI is a heritage Cuban station. The listeners are the original imigrants who grew up in Cuba. Our WQ BA has an average age of 41, as we put a younger format on it. WAQI has nearly 3 times the numbers, but we feel HD will help WQBA as we will eventually have to transform WAQI.

>>
>> $149 car radio this week. 6 others, from the Tivoli on down were

> Announced is one thing. Available is another.

The car radios are shipping. One of our talents in Houston got one at an audio place... when we switched on HD2 on KLTN.

> And the announcements are for products a month and a half or more out.
> With IBOC rash trashing listening in my area for more than a year, now
> listeners--the ones in my neighborhood that I can directly observe the
> listening habits of--have moved to other outlets. Most of them iPod. With
> a few to satellite. The rest have moved to FM.

If you listen to the racket from Wall Street, they feel satellite may never make it. Its window is closing, they signed all the disenfranchised and early adopters, and they feel the price / value equation does not work for the rest of America.
>
> A mere announcement now...well, if you wanted to turn over the entire
> audience in a short time, this would be the way to do it.

Supposedly there will be about 10 choices on the shelves by labor day.

> Then, you're making my point for me. AM-HD is going to benefit only
> existing listeners. IN the meantime, trashing the band audibly as any
> potential listeners sample content only underscored that FM is a better
> option for them. Younger, or older.

No, in our case, we are aiming at 35-44, and waiting for HD to start.
>>
>> None of the stations I have studied gets any real listening outside of

This is a typical problem. The CD started slow. The hardware was costly, so not many CDs put out. Slowly, the prices went down and the software increased. But no manufacturer is going to produce until most of America has HD stations.

>
>
> Doing nothing may not be an alternative, but it may be better than doing

FM stereo was permitted in 1960, and it took 3 years to get to 100 stations.
It had zero audience impact then.

What made FM work was when the FCC madated the end to simulcasting, and
suddenly a thousand or so new formats came on all over America, most with no
commercials... in an era when AM had 18 minutes an hour on nearly every
station.
>

> There are a number of AM stations playing music but I don't listen to

Satellite has 300 channels in the hands of only two owners.

AM and FM radio have 13,500 stations in the hads of about 3500 owners.

When there are viable alternative delivery systems to towers in the marksh
and antennas on the hill, we will push the content through them. For the
moment, there are no "free" alternatives that seem to be both viable, not
tied to a cellular provider, or don't have recurring fees associated to
them.

Whatever that means.

Are you DX's sock puppet? You both post the same gibberish, with no content, no facts, no suggestions and no information. You just are here to insult others.

At least DX had a brief exchange about Niger today. You don't apport anything.

I can't say myself as my latest issue would be 1997. I had only heard that Niger was reportedly in English per the WRTH via another source.

Not shown on EiBi nor the current BDXC Africa list as being in English at that time.

WLS did something like that under Michael Packer. A memo was leaked
to Bob Feder of the Sun-Times who hammered WLS for weeks about the
displacement of the older listeners in favor of younger demos. The
stink hit other media, and eventually, the strategy had to be rescinded.
If Roe Conn called someone a blue hair today, there would be armed
riots at 190 North. If you really want to blow off 55+, it's going to
have to be done gracefully. Guys like Feder really don't get it. And are
on a f*cking mission when they get their back up about things like this.

>> But not providing anything more attractive than audio quality for those
>> who generally do not. If audio quality were the only selling point to
>> KEZK, it would still be Schulke. And WRTH would have never been 'Beautiful
>> Music.' It's the content that attracted and held listeners to each.

> HD stations.
>>

The difference being that the CD was an optional outlet to content,
and that the same desirable content was still available through previous
technology. If you didn't have a CD player, you didn't get LP's full of
digital hash. That's my point, here: With the current arrangement, I
can't get the content of my choice--LOCAL content, not out of market
content--because it's covered up with digital rash from offending
stations testing HD. And the digital solution is not widely available
for at least another month and a half. This after a year's worth of
escalating HD interference.

Leaving me, and much of Lake County to move to alternatives. That
seems like it's pretty shortsighted thinking. Unless the goal is to blow
off existing listeners before creating new radio content under HD. Why
is it that the industry is so loathe to address that. So far, you've not
addressed that issue, yourself, here. Which raises the spectre that I,
and my neighbors, are just to be casualties of new technology. Worth
little. Valued less.

The fact that no one wants to address this indicates some mindsets
that are exactly the reason corporations, and media corporations
especially, have become so reviled by street level citizens. We don't
matter. Our complaints, legitimate complaints now, are not only not
addressed, but effectively stonewalled by the unwillingness to actually
acknowledge that a problem exists.

I have a colleague, who, when we all get together to speak of
technical issues in our businesses, has only one answer when the subject
of computers come up: get a Mac.

It doesn't matter what the issue. The response is always the same:
get a Mac.

One particular gathering, the subject of a locked hard drive came up.
One colleague's year's work was out of reach. And we were all discussing
options for retrieving the data. In walks this clown and all he says is
"Get a Mac."

Well the one person who was trying to retrieve his work came over the
table at this Bozo, and we were all pretty much in agreement... here was
someone who had all the answers, but didn't bother to listen to the
questions, and in a very high handed and dismissive tone, offered advice
that failed to address the problem in an ongoing pattern.

This is what's driving so many of this newsgroup to abuse in these
discussions....the problems...the REAL problems associated with the
implementation of AM-HD aren't being addressed, ie, interference with
local stations. And questions about why we don't matter go largely

unaddressed....in favor of data about contours vs ratings, and
monetizable listeners.

So, let me put it this way....WLS is strong in Lake County. Even
though the signal is not 15mv/m. Lake County listenership is high, and
WLS is a strong radio station, here. And yet, here, HD rash has been
encroaching on WLS, to the degree that it's now sometimes virtually
impossible to hear, much less enjoy....and this HD rash is coming from
another radio station. You telling me this is acceptable? Even when
WLS, itself is NOT transmitting HD and so no digital solution is
available? (the C-Quam pilot is still lit and the station is still in
stereo, even as of 00:30 UTC today.

Why is no one addressing this? This is not DX. This is not skywave.
It's LOCAL. And it's local interference.

With all due respect, David...why can't you address THIS?

And circumstances like it across the nation. Because they DO exist.

We get that it's going to become a standard. We get that it uses
'unused interchannel bandwidth.' But there IS interference. And it IS
LOCAL interference. Without an HD solution. It's interference that we
can't avoid, and that we can't resolve. It's LP's full of digital noise
and no CD players within miles.

Is it just 'tough shit?' Is that why you don't address it?

Because, if so, you're going to find that the mentality that allows
the mindset that stonewall's real, valid, local listener's concerns is a
mindset that will bring to market more contempt than embrace. And THAT,
more than any other single factor, is what separates success from
struggle and eventually, failure.

And THAT is what has the historically even tempered members (Brenda
Ann is a good example) of at least this newsgroup spitting and swearing
at you like they'd just gotten a Language Development Grant from the Navy.

And we've shared some light moments, on USENet in the past, but
you're trying even MY patience. And I'm not your adversary.

Because he's a shill, plain and simple. You know this, I know this.

He's been given something to sell, and by god he's gonna sell it to you, me, and
everyone else, whether we like it or not.

He's going to be a shill until the day he's put under.

Don't forget that he's got a few thousand rounds of Chinese ammunition
for his assault rifles. The VA will wait until it's too late to talk him
down from the campus water tower.

It's sad really...this lunacy could have easily been prevented from
going that far. It's time to get mandatory sanity tests for militia members.

Hey everyone! As you might know by now I'm the proud owner of a new Sony 7600GR and a Kaito 1103! I'll be headed to the Maldives and Seychelles on business soon, and I'd like to try my hand at ute-monitoring. I just downloaded jvcomm software, now all I need are freqs. I haven't been able to find a good list online (at least one that's not a few years old.) Can anyone help?

> A better antenna will do wonders.

Maybe not.

For a lot of FM receivers, they are actually too sensitive, which
means in a strong RF field, ie a major city with lots of radio stations,
they start overloading, preventing the reception of lesser stations. Add
a "good antenna" and it will just make matters worse.

The best FM receiver I've ever had (which I admit does not encompass
a wide variety of FM receivers) was a Sony from about 1971. It
was quite "deaf", but unlike a lot of average receivers, it didn't overload.
The trick was it lacked an RF stage, the antenna connecting directly
to the mixer via the front end filtering. When I was given it about
twenty years ago, it was the first time I actually did any FM DXing.

I've read articles about Henry Kloss and he lamented that too many
FM radios had been designed for maximum sensitivity, which worked
fine if you were out in the wilderness, but didn't work at all
if you were in a big city. Apparently his designs were less
spectacular in specs, but resulted in better performance overall.

Source record: 84900

Might not sound like a big deal, except there are over 500 people on board this sucker.

Here's a rather large recording of a phone patch between the pilot and Icelandic Airways dispatch. The pilot isn't always easy to copy, but here goes:

http://renopithicus.tripod.com/aircraft2.wav

Sorry about the quality of the recording, but I wasn't really prepared to record anything. This is also just part of the recording I made, which ended up an enormous .wav file.

They said any further comms would be on 8930 khz, but enough time has passed that it may not be worth monitoring now.

Steve

D Peter Maus:

He doesn't want to hear about any interference. If there is any, it's to non-existant listeners that do not figure into the demographic. Radio is no longer for everyone, it's for 18-35 year olds that actually do only a small percentage of actual buying, whereas we boomers have a lot more disposable income. Add to that that we will be around a lot longer then the industry thinks we will.. we're no longer dying at 55 years old like we were 50 years ago, but at closer to 85, and will be buying a lot of big ticket items between now and then.

I for one am sick to death of being marginalized out of everything because of my age and tastes (I still listen to MUSIC).

But there ARE weapons of mass destruction in Iraq. They KNOW where they are, remember?

==========
Q: And is it curious to you that given how much control U.S. and coalition forces now have in the country, they haven't found any weapons of mass destruction?

Rumsfeld, May 30, 2003: Not at all. If you think -- let me take that, both pieces -- the area in the south and the west and the north that coalition forces control is substantial. It happens not to be the area where weapons of mass destruction were dispersed. We know where they are. They're in the area around Tikrit and Baghdad and east, west, south and north somewhat.

==========

I'm surprised Colin Powell hasn't killed himself yet.

Ok then what is the reason? The reason is not sound quality because it
is OK for the program material.

< Snip >

I think plenty of people think about AM radio. What about all the people
that listen to talk radio? They don't think about it? What about all the
people that look to AM radio for news and weather and traffic reports?

Maybe this is an effort to kill talk radio where people can get the
political right point of view. The leftists have TV, newspapers, and FM
covered. It's only on AM band that Air America can't make it.

I am not so sure about that, when my friend had to send back his 340 to TT
last year for a small issue he got the MOST MISERABLE SERVICE over the
course of SEVERAL MONTHS !!!!!! and had to send a registered letter to even
get a response and eventually got a half assed apology from a vide
president. He did get it back fixed after several months !!!!!!!!

my friend said that if the 340 wasn't so great he would sell it and piss on
TT

unless you are a GOVT or industrial customer then the service you get from
TT is a CRAP SHOOT......keep your fingers crossed that you will get it back
in less than 6 months.

That's simply not true, Mike. I sent my 350 to TT for a minor repair
and a touchup and it was done, on time, as they promised, for less than
$100.

And my experience is not unique. There are many here who have had
similar experiences. And recounted them, as I did earlier this year.

I've found them to be helpful when I simply needed a question
answered, sometimes offering detailed advice. And no one would mistake
me for a governmental nor industrial customer.

We have seen nothing like this. We know where our diary mentions come from
and the signal is inot impaired in areas where currently we have listeners.
In fact, listening is up (50% increase in very little is still very little,
though) since HD has been active.
>

> listeners.

The only think we are interested in today is listening inside our home metro. This comes, as I have metioned in posts to Mr. Dresser, as a direct consequence of the FCC policies for decades of encouraging local service by forcing local content, keeping power levels very low as national pollicy, and by not recognizing that most AMs have seen the market outgrow the signal.

> So, let me put it this way....WLS is strong in Lake County. Even though

If you tell me the station, I can ask our local engineer, who is very strong on RF issues.
from the Navy.

> And we've shared some light moments, on USENet in the past, but you're
> trying even MY patience. And I'm not your adversary.

This is not an easy discussion, and the first step is accepting that AM will not exist in 10 years or less if something is not done. There is no other solution than HD. Either it works, or the band dies. Nobody is coming into the party, and the ones already there are undesirable to advertisers.

Here are the facts: radio can not sell listeners outside the home market. Radio can not sell listeners over 55.

Neither of these facts are radio's fault, nor can they be addressed or corrected by radio stations.

>Radio is no
> longer for everyone, it's for 18-35 year olds that actually do only a
> small
> percentage of actual buying, whereas we boomers have a lot more disposable
> income.

Nearly all add buys fall in the 18-34 or 25-54 demos, or subsets of them. No buys fall in 55 plus. This is a client dictate, not something radio has anything to do with.

> Add to that that we will be around a lot longer then the industry
> thinks we will.. we're no longer dying at 55 years old like we were 50
> years
> ago, but at closer to 85, and will be buying a lot of big ticket items
> between now and then.

So what? Advertisers do not buy 55+ audiences at all. In the first 6 months of 2006, not one agency buy in LA came down for 55+, in fact. And that is in the market that has 6% of all radio advertising in the USA.
>
> I for one am sick to death of being marginalized out of everything because
> of my age and tastes (I still listen to MUSIC).

Blame Proctor & Gamble et. al. and not radio. We just program to audiences that advertisers buy, not the ones they ignore.

> What station? I'm curious about this...

I'm having trouble receiving WLS. The offending station, I'm not
sure. I can't make out much due to the IBOC rash from there down.

I'd be interested in what your engineer has to say.

I can send you audio files of the AM band from my location, if
you'd like.

> This is not an easy discussion, and the first step is accepting that AM will
> not exist in 10 years or less if something is not done. There is no other

If things were that dire, it would make sense to have a less
intrusive/obtrusive implementation strategy. Disenfranchising local
listening with digital noise on a band that's fighting for it's
survival, is like everything that's been done to AM in the last 30
years: shortsighted, and ultimately, counterproductive.

Taking your scenario one step further... if AM is truly on it's last,
tentative legs, and AM stations of significant investment are in dire
straits, and if the large companies are beginning to move AM stations
to the FM band, where, say, in Chicago would stations like WBBM, WGN,
WSCR, WLS go? There are no open allocations. And it's not like there are
any allocations that would be worthy of sacrifice. And Young Talk was
tried here. It failed dismally. (Ask Turi Ryder how many times she's
been here.) Where would that content go? Where would Rush, Hannity,
Levin, or even Franken, Rhodes, Springer and Malloy go?

More to the point, if AM is over in 10 or less, and you're looking at a 5 year implementation, do you really think that there's a chance in less than 5 years remaining you can rebuild what you've lost?

David, I certainly see how you've arrived at your conclusions, Radio being what it has always been and all...but what you're describing is a roll of the dice with far greater chance of crapping out than staying in the game. Almost entirely by serving the needs of advertisers and broadcasters over the needs of listeners who ultimately carry the water.

And if Radio is really more about Radio than it is about the audience, is it any wonder why listenership and revenues are eroding in favor of alternative outlets? Non traditional outlets permitting mass customization vs traditional radio where answers to complaints are met with prepackaged corporate non responses, and listeners can be disenfranchised by a statistician in a locked room.

Can you see now why I've turned down offers to return?

>

3845. a longwave thread

I just joined Digital Spy forums a few days ago, and there seems to be an issue with longwave threads in the broadcast forum being shut down by moderators. So I thought I'd try starting a longwave thread here.

Sounds like the Isle of Man might have a commercial longwave broadcaster in the near future. I was surprised to hear from other forum users there that cars in Europe have longwave reception in their radios. It must be decades since that happened here in the USA.

Anyone have interesting longwave topics to discuss?

The 8 seconds has nothing to do with the DSP. You'd be amazed at the
kind of fire power you can get out of $10 DSP. What you are seeing is
the data is inteleaved 8 ways to sunday to make sure that it can be
resonstructed even if entire blocks of transmitted data is lost. GSM
does the same thing, and that's where most of the delay versus
land-line comes from.

It does not sound better to me. FM has a little more of a high end
response but that's about it. You sure as hell are not going to hear the
difference on a clock radio.

Like I said before AM sounds good. I don't see what the problem is with the sound quality. The quality can go down when you go out of the area but you won't consider that anyway because it is out of the market. I find weak signal FM more annoying than weak signal AM. FM gets a pretty loud background hiss on a weak signal when you turn up the volume.

Well what do most people think then, that the voices are in their head?
Of course they think about radio. They have to take the time to tune the
stations in and program their favorites to memory.

> > Maybe this is an effort to kill talk radio where people can get the

Yeah, and one to think about. Maybe this is a deliberate destruction of
the AMBCB.

Never got the batteries to re-charge via the radio so I dropped the batteries into my normal AA charger. 12 hours later took them out and placed them into my radio and !Pffof! smoked the bitch!

Looked in the manual and it indicates that you should never recharge the batteries in any other way than indicated, ie, in the radio with their power-pack, etc!

Anyone heard of this before, there were the batteries that were included with the radio, green eton NI-MH 1100! Guess it's time to go to ebay for another!

Well, yes that is true in some situations. But in others, especially
the typical suburban setting a simple dipole FM antenna will result in
a big improvement. The OP offered no information aout the environment,
so it's anyones guess as to what will really work.

Jim,
If the radio is rated for the type and voltage of the batteries you
installed in it, then the batteries are not at fault. Your problem lies else
where.

I recharge my green Degen 1300 MiMH batteries in a slow charge Powerex MH C-401FS battery charger with no problems. Maybe you have one bad battery? Did you check to see if your radio will work with a fresh set of alkaline batteries?

Are you saying that batteries of the correct size and voltage which
were recharged in an external charger caused the radio to catch or
fire, or at least begin to smoke?

>
> Looked in the manual and it indicates that you should never recharge
> the batteries in any other way than indicated, ie, in the radio with

I think the manual will say somehting like only NIMH batteries should
be recharged in the radio(meaning not nicad or alkaline).

>

Kenwood units often have extra anttenuation below the 160 meter ham
band to prevent strong broadcast stations from overloading the front ends.

On units sold in the U.S., they often increased it without documenting it.
As an example, my TS-430 had a 220 ohm resistor instead of the (what I
remember as) an 80 ohm one. I replaced it with a 22 ohm resistor from a
"mod" I found and it helped.

My R-5000 also benefitted from a similar "fix".

When I did live in the U.S. (Philly) I was less than five miles from several
AM broadcast transmitters and needed it. Here in Jerusalem, it's the other
way around. Without the mod, the best I could ever get from an AM
broadcast station was S9.

Geoff.

RESULT
rec.radio.shortwave will be removed

The Big-8 Management Board has decided by consensus to remove the newsgroup rec.radio.shortwave. Voting began on 23 Jul 2006, and ended on 24 Jul 2006.

This group will be removed on 31 Jul 2006.

RATIONALE: remove rec.radio.shortwave

The last on topic month was March 1995.

There are other more suitable means of discussing short wave propagation, so rec.radio.shortwave is not a suitable candidate for conversion to a moderated newsgroup.

HISTORY:

The newsgroup rec.radio.shortwave was created in August 1988, with the first message posted in August 1988.

DISTRIBUTION:

This document has been posted to the following newsgroups:

news.announce.newgroups
news.groups
rec.radio.shortwave

PROPONENT:

Jim Riley <jimrtex@pipeline.com>

> For some reason it isn't playing. Can you give a summary?

The gist of it is this. The pilot tells Icelandic dispatch that they have over 500 people on board and no water, and this promises to make the flight especially miserable for several of the people on board. Pilot says he's thinking about letting the passengers vote on whether to proceed with the flight or divert to some new destination to get water. Icelandic dispatch then asks the pilot where he could go to get running water. The pilot suggests Gander or Boston. Dispatch then asks the pilot if he knows why the plane has no running water...is it because the tanks are empty or because of something else? The pilot says he doesn't know. Icelandic dispatch then says that the flight should continue even if it's going to be uncomfortable for some people. If the flight diverts to Boston, say, and they find out that there's some kind of technical problem responsible for the lack of running water on board, then they'd be screwed because their Boston facility would not be able to repair such a problem.

And that's about where the recording ends. Sorry it wouldn't run for you.

Steve

Interesting catch. Those frequencies can result in some interesting catches. Thanks for giving that detailed description.

A lack of potable running water shouldn't be too much of a problem because most flights pack a lot of bottled water. But a lack of water or chemical to flush the toilets would be another thing entirely. I guess we are left to wonder how it played out.

How about you HD/IBOC hotdogs stand down, and we'll wait 10 years to see if AM still exists?

I'd bet good ol' AM would still be around and operating.

I know it'd be tough on you Edweenie, but I'm certain you could find something else to shill.

That's simply not true, Mike. I sent my 350 to TT for a minor repair and a touchup and it was done, on time, as they promised, for less than $100.

==========

Peter.

i've been looking at the TT RX350D. i was wondering if you ever had the lock-up prob? read about it on the web; 350 some times needs a re-boot/ re-start?

Father Michael.

It sounds like the pilot says they had 520 passengers on board. With that many people, I guess you would want working toilets! I wanted to monitor 8930 to see if there were more developments later, but I had things to do around that house that couldn't really wait.

The E-10 must have NIMH batteries selected in System Settings to recharge in the radio.
The would not recharge if the setting was for regular AA batteries.

If radio was set for regular AA and NIMH batteries were inserted
what would happen? The manual is not clear about that. It does say the radio must
be set for the proper batteries and it does say it won't charge regular AA if that
is attempted.

That is good information. The O.P. should go back and re-read the
manual and read your message. I get the feeling that the manual was
probably skimmed at best.

I've had the best luck using a wall wart recharger and 2 sets of nimh
batteries on a DE1103. That setup allows the radio to stay truly
portable at all times.

I've not encountered that, no. I had a backlight fail. Which apparently is not an uncommon problem with early RX-350. The problem was corrected with more substantial SMD resistors and a minor circuit modification on subsequent units, and now, mine.

Firware is stable, and I've never encountered so much as a blip. Updates went smoothly as well. No, it's not locked up, and believe me when I tell you, I did my best to try to force one.

I've been so pleased with RX-350 that I sold several of my other receivers.

And the folks at Ten-Tec couldn't have been more helpful.

Larry Leonard (what is it about them d..n Larrys anyway?) at Oregon Magazine in Oregon once tried to Join the U.S.Air Force.The doc caught a heart murmor in Larry Leonard's chest.Larry Leonard told me he picked up that U.S.Air Force recruiter guy by his shirt.The recruiter guy said,it wouldn't make any difference,, they would catch you down the line anyway.
Lets have a show of hands for Larry Leonard in Oregon,,, at least he tried.

Ah, yes. That way they can have audio tracks for different languages.

With the possiblity of a couple dozen 200-350 kbps MP3 (or whatever)
audio broadcasts in each metro area, why are the IBOC guys even
bothering?

Many efforts have been made, all across the US, to make AM attract younger
demos via formats designed for 35-44, etc. The only one that has worked
somewhat is sports, but all music attempts have failed miserably. The
reason: AM does not sound as good. Listeners tell us this.

People do not spend any time thinking about how radio works, why one band has some programs and why another has others, etc. They think only as far as the on and off switch and the presets. It is an appliance, free, and easy to change. Nobody, short of those on this group and similar ones, spend any time considering how radio works.

In the case of AM, the only thing listeners under 45 think is that it sounds bad. Period.

This is why the programming of WTOP in DC moved to FM, that of WNLS in Tallahassee moved to FM, of WTAR in Phoenix now going to simulcast on FM, KSL in Salt Lake doing the same thing... etc. These stations believe they have a viable format in, at least, 35-44, which they do not get, but believe they can get with the better sound quality of FM.

It probably would. But, you are not getting the main issue: every 18 months, the average age of AM listeners increases by a year. That means that in another few years, most AM listeners will be over 55, and advertisers do not buy over 55 listenership. The stations may be around, but they will be losing money.

Never ever charge NiMh cells in a NiCad charger.
It will OVER-CHARGE them every time. However the
radio should have had some kind of an over-voltage
circuit built into it. That said however, after
that experience are you are REALLY going to buy
another one of these cheap Chinese made Eton
pieces of junk??? Get yourself a Sony or a Grundig
or better yet a vintage Radio Shack or GE or Panasonic
shortwave. They were built far better than the modern
day crap and their analog tuning is best for swl listening.

Before (they ate it first) then they tossed it in the
bin in the "ole two-holer" out back.

What I want to know is did they get suckered into the
gold numismatic coins scam like so many other
shortwave radio listening PAYtriots seem to do? (laughing)

I love that guy from ----- who is shilling coins for $1400
each that have only have half an oz of gold in them.
Not bad a $700 per item markup. Only the shortwave
paytriot fools would bit this rotten carrot on a line....

I like coax (cable TV type, RG58 or RG6) connecting to a longwire. They sell a connector you can solder the longwire onto this (It's a type F connector usually for coax). Also they have a type F connector to 1/8" minijack which will go into many of the radios. Not sure if you have minijack or just a wire for your radio.

I've tried a longwire without coax, and it picks up too much noise inside the house. The coax helps you just get the signal from the outside. It sounds like you're in an apartment in New York or something, and that you'd probably need to 'dangle' the antenna down. Vertical antennas will pick up more noise than a horizontal antenna. Ground the outside of the coax if you can, but I did not notice much difference when I did.

> resource.

If all HD does is "improve" the sound but not
the programming, then there won't be much reason
to move to it. If the programming is generic and
formulaic (and the younger crowd has figured that
out), then why listen? So you can hear the same
stuff only with better sound?

People will migrate to a new radio format if there's
a promise of real change in what is being listened
to, not the same stuff only sounding better.

It's like purchasing a car. If the imports were simply
as good as the Big Three, then no one would buy
them except for non-practical reasons. However,
the imports were made better than the Big Three's
cars, and there then became a practical reason to
buy one. Personal example: I own a Ford Contour,
and in the first 5 years I owned it, it had a total of
something like $3000 worth of repairs to it. That's
repairs, not regular maintenance. By comparison,
we also own a Toyota Sienna, which in the 5 years
we've owned it we've had $0 worth of extraneous
repairs to it. While the Contour cost less than either
a similarly equipped Corolla or Camry, the extra money
spent on repairs makes either car look less expensive

by comparision. Especially since the Contour is now 10 years old, and has had about $5000 worth of repairs to it.

The moral is that you have to be getting more in a practical sense for HD radio to be accepted by the masses. Just saying "it sounds better" won't do anything if that's the only thing that HD has going for it.

Receiver closed at $2575.00. Bidding was still at $1590,00 with 40 seconds to go, then the action started.

> is like everything that's been done to AM in the last 30 years:
> shortsighted, and ultimately, counterproductive.

This is about the first case of such interference with a "big" station I have heard of. In some cases, there are cases of stations losing fringe coverage, such as Salem's decision to turn off HD on WIND to protect the very rural coverage of 540 outside Milwaukee. But, for most broadcasters, there has been a reasoned decision to sacrifice some remote coverage for the improved quality of HD in the metros.

It may be this is akin to making the decision to ride a flat on the rim to get out of dangerous traffic... you save your life, but ruin the rim. It is a trade off.

> Where would that content go? Where would Rush, Hannity, Levin, or even
> Franken, Rhodes, Springer and Malloy go?

In Phoenix, Bonneville bought a top 10 CHR, and is going to simulcast KTAR on it. In Salt Lake, they took a lower-performing FM and nuked the programming to simulcast KSL. In both cases, the AM had no coverage or interference issues.

In Washington, they moved WTOP, the frequent #1 station to FM, and did niche formatting on the old AM channel which was the best Am signal in DC.

Clear Channel took Tallahassee's best AM (1270) and moved news talk to an FM that was lower in billings and put only sports on the AM, WNLS.

This sort of thing is starting to happen, with the intervals being less and less between swaps.

There are some markets where AM just willnot survive, as there are literally no full coverage stations. In most rural areas the billing is now on FM, and the AMs are also dieing. A good example is Moberly, MO. The Class IV KWIX was famous as a local station that, in the 70's, billed over $1 million. Today, it barely does $100 thousand while the sister FM bills nearly $2 million. KWIX was so famous that they even had a school where they trained sales management of smaller market stations. But the AM, in obviously competent hands, has become a rider on the FM bandwagon. It is a 1 kw operation on 1340, while the FM is a full C. Nobody in that part of Missouri is being deprived of AM service since I find about 8 FMs now put a 60 dbu over Moberly, so the local service has imporved.
>

I don't think it is about rebuilding. Once HD has adequater receivers, there will be new formats. Some, like WGN, made the mistake of ageing with the listener and may be dead for all time.

> David, I certainly see how you've arrived at your conclusions, Radio

> roll of the dice with far greater chance of crapping out than staying in
> the game. Almost entirely by serving the needs of advertisers and
> broadcasters over the needs of listeners who ultimately carry the water.

The reason AM is losing viability is that it only attracts 55+ listeners. Advertisers do not buy this crowd, so eventually, stations start losing money. All free radio formats work only if there is advertiser support. This is why teen lsitening is lower than 18-54. We don't program to teens, as there is no revenue.
>
> And if Radio is really more about Radio than it is about the audience,
> is it any wonder why listenership and revenues are eroding in favor of
> alternative outlets?

Revenue is not eroding. It is growing slowly, but is, in the last few years, over 8% of all ad revenue for the first time since post-freeze days.

> Non traditional outlets permitting mass customization vs traditional radio
> where answers to complaints are met with prepackaged corporate non
> responses, and listeners can be disenfranchised by a statistician in a
> locked room.

There are a percentage of people to whom mass appeal offerings are not appealing, starting with teens and over 55. Radio can not afford to go after these groups, so they must find alternatives.

From what I've read VOA English is shutting down because of budget cuts
or something.

Cincinnati is in the same boat. Between Dayton,
Columbus, Lexington, Louisville, Indy and us,
there's no bandwidth to move major AM stations
(the big ones locally: 550, 700, 1360, and 1530).
The only way to do that is to remove the format
on some other stations, and someone's going to
lose out. Which is it? Urban contemporary?
Mix? Album oriented rock? Classic rock?

If Clear Channel wants to move any of their
four AM stations, they'll have to give up one
of those formats to do it. Or buy more stations,
but those stations are owned (for the most part)
by other mega conglomerates who aren't selling.

Peter, you know, this might be a good thing in the
end. If AM ceases to be viable from a corporate
perspective, some local group will come along and
buy the stations and put on their own thing. In
a bizarre sort of way, it might lead to a renaissance
in the AM format; the big boys leave, and someone
will fill in the blank spaces.

There may be fewer listeners, but the radio will be
oriented more toward what those listeners want,
rather than packaged demographics.

Thank you. Today's actually been a pretty good day. I haven't seen
this much signal on 890 here in a couple of weeks, so what noise there
is less than it was last week, when I could barely make out the station.

I can see where the decision is made. But what I can't see is how, so
piecemeal this implementation is being done. A strategy to broadcasters,
perhaps, but chaos to the listeners, who do, after all account for those
who pay the freight.

I remember KWIX. Listened to it many times while travelling. KWIX
was one of the reasons why I was so excited to get the offer from KOEL,
another monster in the middle of a cornfield in Iowa, but that convered
50 counties in 3 states. I had more listeners on KOEL at night than some
cities had population.

They're a shade of their former selves, now.

They're trying. Todd Manley is the imaging director there, and he's
done a lot to hip the place up. Callers are sounding younger, too.
Whether there's hope...no telling. That would be one I'd be very sorry
to see go.

I do not think that the idea that you can do talk for people who are not into talk will ever work. Talk listeners, aside from morning shows or potty talk, appeals to 35+ in any language. So the issue is to make the delivery method and the format relevant to the 35-44 group that should listen to talk, but does not because they grew up after AM was the music medium of choice and do not like it.

Many comment that "AM sounds fine to me." We find that in talking to listeners... the older the listener, the more tolerant of AM LoFi they tend to be. This is because the band has no inherent stigma, and these listeners grew up on the sound... as awful as it is.

Since stations on AM went to talk formats because they could not do music one, we know music is the last thing that may come back to AM with HD. For a start, talk shows will sound better to the 35-44 demo and help keep stations with a good balance of 35-54 to counter the "old" perception by buyers.

Asking under-35's, in their majority, to listen to any kind of talk with content is not going to work. I have done personality heavy stations that played 4 or 5 songs an hour all day, but there was a music base and the talk was not political... it was lifestyle. I think we will see some creative attempts and a bunch of failures before we find out how to make AM become

relevant to younger demos. Personally, I think it is going to be fun. And in the long run, it will benefit listeners.... look how the fear of death after the TV freeze forced music radio to develop into a robust alternative.

I clearly stated I was relaying listener opoinions, not mine. I grew up on
both AM and DX and have no problems with fading and such.

I would imagine that many DXers have had this experience: you are in your
car and tuning the AM dial to see what unusual thing you can get. The
passenger or passengers quickly ask why you are listeing to "that noise."

Most listeners are not DXers and don't want fading, static and such.

Me too! Ever since around 1500. There also seems to be some other activity going on up frequency possibly in conjunction with that going on on 6218.

If you're right, and I'm not fully convinced you are about this, what you're suggesting is something of a second, if not third, Golden Age, where innovation is survival, and creativity sells.

IF that were to happen, you may be on to something very exciting. But it would take some visionary players. And some investors 'hands off.'

Well, with summer static and all that, he needs something to keep himself
busy.

The funny thing is that he finds things I post to the website within hours
of their posting.

Were I a Hollywood actor, I could claim I was so famous I had my own
stalker.

Most utility and military comms are USB. The frequency is 6218.

The activity is currently almost continuos at the moment. You can't miss it.

The upper frequency seems to be around 6219.5 USB with what sounds like comms in Chinese, around the same level as the comms on 6218. They don't talk very often.

Wonder if it's some sort of joint manoeuvres with Taiwan?

A few days ago, they had this post on the DXLD:

http://www.worldofradio.com/dxld6106.txt

"Voice of Armenia announced in its German broadcasts on
Sunday, Monday and Tuesday that they will "soon" leave shortwave:"

When I first scanned it, I read Voice of America.... When I actually
read it, I realized what was actually written... :-)

I guess it's related to how your mind really reads things:

I assume you are referring to vintage Grundigs or European Grundigs. All "Grundig" radios sold in the United States are produced by Eton Corp and the Grundig name is licensed. I have a "Grundig" Mini 30PE produced by Eton and have had no problems with it.

When recommending vintage shortwave receivers Zenith Transoceanic's should also be considered. They were rugged receivers and very well designed.

Thanks,

Bobby

Well I suggest that you find out what the 35-44 group wants to talk
about then.

I'm not sure how you came to the conclusion the 35-44 group is not
listening. I hear plenty of people calling in to talk shows that are in
that age group. Often they call from work during the day or home later
in the day.

Their is no sense in putting music on AM except for the nostalgia
stations like I used to list to as a kid WKBW 1520 in Buffalo.

I would listen to WKBW because they brought back some of the
personalities from the past and they were very entertaining (read
besides the music that was played) but it looks like they went to left
wing talk radio. Pretty ugly. This link should be instructive.

> about then.

We already know that. They just don't want to hear it on AM. This is why, as
I have posted several times, a growing group of major market AM news / talk
staitons have moved to FM or are simulcasting on FM... because they know the
AM delivery system is not acceptable to the 35-44 group.
>
> I'm not sure how you came to the conclusion the 35-44 group is not

Very, very few are listening. Keep in mind, talk shows screen calls and nuke
most of the Social Security age callers, and give preference to younger
sounding listeners. It only takes a few calls out of thousands to give this

impression. Most listeners are, however, over 45... 60% are over 55.
>
> Their is no sense in putting music on AM except for the nostalgia
> stations like I used to list to as a kid WKBW 1520 in Buffalo.

That does not work. Clear Channel tried "real oldies" going back to the 50's on a group of fairly decent AMs, and so did Entercom. None worked.

Standards is pure 65+. None of these groups is salable to advertisers.

With improved quality vai HD, AM will have further opportunites to appeal to 35-44 with existing formats and may develop new or niche formats.

They got no local ratings that they could sell. They changed to a format that they could sell.

What we have here is a failure to communicate. People do think about radio when looking for programming content and when they find what they like program in the buttons on the radio so they can go right to it. People will listen at certain times to be entertained such as during car commutes because you can listen and drive at the same time.

I am not different than the majority of people in that I turn the radio on to hear the programming. If I want to "think" about radio I read and post to this news group.

I "get that" by talking to listeners in person, or by having my staff do
that. AM is irrelevant due to sound quality. Under a certain age, you could
be giving away money and they would not listen because it is AM.
>

But they do not ask "why." They just select from a menu of free options.

Give it a rest already! I have good stereo equipment at home in my car
and appreciate high fidelity reproduction in music. AM sounds good
because it is good not because I'm old and tolerant.

What are you, dense? You think I would listen to AMBCB if it did not
sound good? Why do think I generally do not listen to Internet radio?
Well I'll tell you why it sucks with all the digital artifacts in the
low bit rate stream.

Good God, I'm the one here complaining about the sound of DRM and
Internet streaming and you think that I think AMBCB is OK because I'm
tolerant?

< Snip >

Then you change the station to a local one. I don't expect other people to listen to a weak distant noisy signal. Only people that are into distant radio reception are into that kind of listening but of course distant stations can be strong and sound just fine to myself and other people in the car that are not into distant station listening.

This is not a problem with AMBCB it is a social problem. I never turn the radio up as loud with other people in the car. Psychologically you generally don't want the radio as loud when you don't control it just like you don't want the car going as fast when you are not the driver. And generally you want some conversation so any noise from the radio competes with that.

Speakers are right next to the heads of people in the back seat and sound louder to them so any noise is much louder to them. When I'm in the back seat I generally ask the driver to turn it down whatever is playing.

They are objecting to the noise between stations. Turn down the volume
during station changing or use the memory buttons programed to local
stations. What a revelation this must be to you.

They think liberal left wing radio is going to sell? Then they are wrong.

Who said anything about why? Are you reading what I posted? I understand
that people not into radio spend no time thinking about it. Why do you
think that this is suddenly a problem with a certain age group and AMBCB?

Europe has commercial broadcasters on the long wave band. I don't think
the long wave has ever had licensed stations in the Americas.

Humor please kind sire.

I understand your first statement, but I don't follow you when you say
they have to keep buying new radios because of:

"They have to keep buying new receivers, because the old ones get
ruined by all the facials !"

I think I see the humor in what you are saying, but would you please
splain it to me? :-)

>> far and away the trump, and whites play it regularly: a subject to
>> which we will return.
>>
>> Turning Injustice into a Game of Chance: The Origins of Race as "Card"
>>
>> First, let us consider the history of this notion: namely, that the
>> "race card" is something people of color play so as to distract the
>> rest of us, or to gain sympathy. For most Americans, the phrase
>> "playing the race card" entered the national lexicon during the O.J.
>> Simpson trial. Robert Shapiro, one of Simpson's attorneys famously
>> claimed, in the aftermath of his client's acquittal, that co-counsel
>> Johnnie Cochran had "played the race card, and dealt it from the
>> bottom of the deck." The allegation referred to Cochran's bringing up
>> officer Mark Fuhrman's regular use of the 'n-word' as potentially
>> indicative of his propensity to frame Simpson. To Shapiro, whose own
>> views of his client's innocence apparently shifted over time, the
>> issue of race had no place in the trial, and even if Fuhrman was a

>> racist, this fact had no bearing on whether or not O.J. had killed his
>> ex-wife and Ron Goldman. In other words, the idea that O.J. had been
>> framed because of racism made no sense and to bring it up was to
>> interject race into an arena where it was, or should have been,
>> irrelevant.
>>
>> That a white man like Shapiro could make such an argument, however,
>> speaks to the widely divergent way in which whites and blacks view our
>> respective worlds. For people of color--especially African
>> Americans--the idea that racist cops might frame members of their
>> community is no abstract notion, let alone an exercise in irrational
>> conspiracy theorizing. Rather, it speaks to a social reality about
>> which blacks are acutely aware. Indeed, there has been a history of
>> such misconduct on the part of law enforcement, and for black folks to
>> think those bad old days have ended is, for many, to let down their
>> guard to the possibility of real and persistent injury (1).
>>
>> So if a racist cop is the lead detective in a case, and the one who
>> discovers blood evidence implicating a black man accused of killing
>> two white people, there is a logical alarm bell that goes off in the
>> head of most any black person, but which would remain every bit as
>> silent in the mind of someone who was white. And this too is
>> understandable: for most whites, police are the helpful folks who get
>> your cat out of the tree, or take you around in their patrol car for
>> fun. For us, the idea of brutality or misconduct on the part of such
>> persons seems remote, to the point of being fanciful. It seems the
>> stuff of bad TV dramas, or at the very least, the past--that always
>> remote place to which we can consign our national sins and predations,
>> content all the while that whatever demons may have lurked in those
>> earlier times have long since been vanquished.
>>
>> To whites, blacks who alleged racism in the O.J. case were being
>> absurd, or worse, seeking any excuse to let a black killer off the
>> hook--ignoring that blacks on juries vote to convict black people of
>> crimes every day in this country. And while allegations of black
>> "racial bonding" with the defendant were made regularly after the
>> acquittal in Simpson's criminal trial, no such bonding, this time with
>> the victims, was alleged when a mostly white jury found O.J. civilly
>> liable a few years later. Only blacks can play the race card,
>> apparently; only they think in racial terms, at least to hear white
>> America tell it.
>>
>> Anything but Racism: White Reluctance to Accept the Evidence
>>
>> Since the O.J. trial, it seems as though almost any allegation of
>> racism has been met with the same dismissive reply from the bulk of
>> whites in the U.S. According to national surveys, more than three out
>> of four whites refuse to believe that discrimination is any real
>> problem in America (2). That most whites remain unconvinced of
>> racism's salience--with as few as six percent believing it to be a

>> "very serious problem," according to one poll in the mid 90s
>> (3)--suggests that racism-as-card makes up an awfully weak hand. While

>> Fact is, few folks have heard any of these things before, suggesting
>> how little impact scholarly research on the subject of racism has had
>> on the general public, and how difficult it is to make whites, in
>> particular, give the subject a second thought.
>>

>> Perhaps this is why, contrary to popular belief, research indicates
>> that people of color are actually reluctant to allege racism, be it on
>> the job, or in schools, or anywhere else. Far from "playing the race
>> card" at the drop of a hat, it is actually the case (again, according
>> to scholarly investigation, as opposed to the conventional wisdom of
>> the white public), that black and brown folks typically "stuff" their
>> experiences with discrimination and racism, only making an allegation
>> of such treatment after many, many incidents have transpired, about
>> which they said nothing for fear of being ignored or attacked (10).
>> Precisely because white denial has long trumped claims of racism,
>> people of color tend to underreport their experiences with racial
>> bias, rather than exaggerate them. Again, when it comes to playing a
>> race card, it is more accurate to say that whites are the dealers with
>> the loaded decks, shooting down any evidence of racism as little more
>> than the fantasies of unhinged blacks, unwilling to take personal
>> responsibility for their own problems in life.
>>
>> Blaming the Victims for White Indifference
>>
>> Occasionally, white denial gets creative, and this it does by
>> pretending to come wrapped in sympathy for those who allege racism in
>> the modern era. In other words, while steadfastly rejecting what
>> people of color say they experience--in effect suggesting that they
>> lack the intelligence and/or sanity to accurately interpret their own
>> lives--such commentators seek to assure others that whites really do
>> care about racism, but simply refuse to pin the label on incidents
>> where it doesn't apply. In fact, they'll argue, one of the reasons
>> that whites have developed compassion fatigue on this issue is
>> precisely because of the overuse of the concept, combined with what we
>> view as unfair reactions to racism (such as affirmative action efforts
>> which have, ostensibly, turned us into the victims of racial bias). If
>> blacks would just stop playing the card where it doesn't belong, and
>> stop pushing for so-called preferential treatment, whites would revert
>> back to our prior commitment to equal opportunity, and our heartfelt
>> concern about the issue of racism.
>>
>> Don't laugh. This is actually the position put forward recently by
>> James Taranto, of the Wall Street Journal, who in January suggested
>> that white reluctance to embrace black claims of racism was really the
>> fault of blacks themselves, and the larger civil rights establishment
>> (11). As Taranto put it: "Why do blacks and whites have such divergent
>> views on racial matters? We would argue that it is because of the
>> course that racial policies have taken over the past forty years." He
>> then argues that by trying to bring about racial equality--but failing
>> to do so because of "aggregate differences in motivation, inclination
>> and aptitude" between different racial groups--policies like
>> affirmative action have bred "frustration and resentment" among
>> blacks, and "indifference" among whites, who decide not to think about
>> race at all, rather than engage an issue that seems so toxic to them.
>> In other words, whites think blacks use racism as a crutch for their

>> own inadequacies, and then demand programs and policies that fail to
>> make things much better, all the while discriminating against them as
>> whites. In such an atmosphere, is it any wonder that the two groups
>> view the subject matter differently?
>>
>> But the fundamental flaw in Taranto's argument is its
>> suggestion--implicit though it may be--that prior to the creation of
>> affirmative action, white folks were mostly on board the racial
>> justice and equal opportunity train, and were open to hearing about
>> claims of racism from persons of color. Yet nothing could be further
>> from the truth. White denial is not a form of backlash to the past
>> forty years of civil rights legislation, and white indifference to
>> claims of racism did not only recently emerge, as if from a previous
>> place where whites and blacks had once seen the world similarly.
>> Simply put: whites in every generation have thought there was no real
>> problem with racism, irrespective of the evidence, and in every
>> generation we have been wrong.
>>
>> Denial as an Intergenerational Phenomenon
>>
>> So, for example, what does it say about white rationality and white
>> collective sanity, that in 1963--at a time when in retrospect all
>> would agree racism was rampant in the United States, and before the
>> passage of modern civil rights legislation--nearly two-thirds of
>> whites, when polled, said they believed blacks were treated the same
>> as whites in their communities--almost the same number as say this
>> now, some forty-plus years later? What does it suggest about the
>> extent of white folks' disconnection from the real world, that in
>> 1962, eighty-five percent of whites said black children had just as
>> good a chance as white children to get a good education in their
>> communities (12)? Or that in May, 1968, seventy percent of whites said
>> that blacks were treated the same as whites in their communities,
>> while only seventeen percent said blacks were treated "not very well"
>> and only 3.5 percent said blacks were treated badly? (13)?
>>
>> What does it say about white folks' historic commitment to equal
>> opportunity--and which Taranto would have us believe has only been
>> rendered inoperative because of affirmative action--that in 1963,
>> three-fourths of white Americans told Newsweek, "The Negro is moving
>> too fast" in his demands for equality (14)? Or that in October 1964,
>> nearly two-thirds of whites said that the Civil Rights Act should be
>> enforced gradually, with an emphasis on persuading employers not to
>> discriminate, as opposed to forcing compliance with equal opportunity
>> requirements (15)?
>>
>> What does it say about whites' tenuous grip on mental health that in
>> mid-August 1969, forty-four percent of whites told a Newsweek/Gallup
>> National Opinion Survey that blacks had a better chance than they did
>> to get a good paying job--two times as many as said they would have a
>> worse chance? Or that forty-two percent said blacks had a better

>> chance for a good education than whites, while only seventeen percent
>> said they would have a worse opportunity for a good education, and
>> eighty percent saying blacks would have an equal or better chance? In
>> that same survey, seventy percent said blacks could have improved
>> conditions in the "slums" if they had wanted to, and were more than
>> twice as likely to blame blacks themselves, as opposed to
>> discrimination, for high unemployment in the black community (16).
>>
>> In other words, even when racism was, by virtually all accounts
>> (looking backward in time), institutionalized, white folks were
>> convinced there was no real problem. Indeed, even forty years ago,
>> whites were more likely to think that blacks had better opportunities,
>> than to believe the opposite (and obviously accurate) thing: namely,
>> that whites were advantaged in every realm of American life.
>>
>> Truthfully, this tendency for whites to deny the extent of racism and
>> racial injustice likely extends back far before the 1960s. Although
>> public opinion polls in previous decades rarely if ever asked
>> questions about the extent of racial bias or discrimination, anecdotal
>> surveys of white opinion suggest that at no time have whites in the
>> U.S. ever thought blacks or other people of color were getting a bad
>> shake. White Southerners were all but convinced that their black
>> slaves, for example, had it good, and had no reason to complain about
>> their living conditions or lack of freedoms. After emancipation, but
>> during the introduction of Jim Crow laws and strict Black Codes that
>> limited where African Americans could live and work, white newspapers
>> would regularly editorialize about the "warm relations" between whites
>> and blacks, even as thousands of blacks were being lynched by their
>> white compatriots.
>>
>> From Drapetomania to Victim Syndrome -- Viewing Resistance as Mental
>> Illness
>>
>> Indeed, what better evidence of white denial (even dementia) could one
>> need than that provided by "Doctor" Samuel Cartwright, a
>> well-respected physician of the 19th century, who was so convinced of
>> slavery's benign nature, that he concocted and named a disease to
>> explain the tendency for many slaves to run away from their loving
>> masters. Drapetomania, he called it: a malady that could be cured by
>> keeping the slave in a "child-like state," and taking care not to
>> treat them as equals, while yet striving not to be too cruel. Mild
>> whipping was, to Cartwright, the best cure of all. So there you have
>> it: not only is racial oppression not a problem; even worse, those
>> blacks who resist it, or refuse to bend to it, or complain about it in
>> any fashion, are to be viewed not only as exaggerating their
>> condition, but indeed, as mentally ill (17).
>>
>> And lest one believe that the tendency for whites to psychologically
>> pathologize blacks who complain of racism is only a relic of ancient
>> history, consider a much more recent example, which demonstrates the

>> continuity of this tendency among members of the dominant racial group
>> in America.
>>
>> A few years ago, I served as an expert witness and consultant in a
>> discrimination lawsuit against a school district in Washington State.
>> Therein, numerous examples of individual and institutional racism
>> abounded: from death threats made against black students to which the
>> school district's response was pitifully inadequate, to racially
>> disparate "ability tracking" and disciplinary action. In preparation
>> for trial (which ultimately never took place as the district finally
>> agreed to settle the case for several million dollars and a commitment
>> to policy change), the school system's "psychological experts"
>> evaluated dozens of the plaintiffs (mostly students as well as some of
>> their parents) so as to determine the extent of damage done to them as
>> a result of the racist mistreatment. As one of the plaintiff's
>> experts, I reviewed the reports of said psychologists, and while I was
>> not surprised to see them downplay the damage done to the black folks
>> in this case, I was somewhat startled by how quickly they went beyond
>> the call of duty to actually suggest that several of the plaintiffs
>> exhibited "paranoid" tendencies and symptoms of borderline personality
>> disorder. That having one's life threatened might make one a bit
>> paranoid apparently never entered the minds of the white doctors. That
>> facing racism on a regular basis might lead one to act out, in a way
>> these "experts" would then see as a personality disorder, also seems
>> to have escaped them. In this way, whites have continued to see mental
>> illness behind black claims of victimization, even when that
>> victimization is blatant.
>>
>> In fact, we've even created a name for it: "victimization syndrome."
>> Although not yet part of the DSM-IV (the diagnostic manual of the
>> American Psychiatric Association, used by its members so as to
>> evaluate patients), it is nonetheless a malady from which blacks
>> suffer, to hear a lot of whites tell it. Whenever racism is brought
>> up, such whites insist that blacks are being encouraged (usually by
>> the civil rights establishment) to adopt a victim mentality, and to
>> view themselves as perpetual targets of oppression. By couching their
>> rejection of the claims of racism in these terms, conservatives are
>> able to parade as friends to black folks, only concerned about them
>> and hoping to free them from the debilitating mindset of victimization
>> that liberals wish to see them adopt.
>>
>> Aside from the inherently paternalistic nature of this position,
>> notice too how concern over adopting a victim mentality is very
>> selectively trotted out by the right. So, for example, when crime
>> victims band together--and even form what they call victim's rights
>> groups--no one on the right tells them to get over it, or suggests
>> that by continuing to incessantly bleat about their kidnapped child or
>> murdered loved one, such folks are falling prey to a victim mentality
>> that should be resisted. No indeed: crime victims are venerated,
>> considered experts on proper crime policy (as evidenced by how often

>> their opinions are sought out on the matter by the national press and
>> politicians), and given nothing but sympathy.
>>
>> Likewise, when American Jews raise a cry over perceived anti-Jewish
>> bigotry, or merely teach their children (as I was taught) about the
>> European Holocaust, replete with a slogan of "Never again!" none of
>> the folks who lament black "victimology" suggests that we too are
>> wallowing in a victimization mentality, or somehow at risk for a
>> syndrome of the same name.
>>
>> In other words, it is blacks and blacks alone (with the occasional
>> American Indian or Latino thrown in for good measure when and if they
>> get too uppity) that get branded with the victim mentality label. Not
>> quite drapetomania, but also not far enough from the kind of thinking
>> that gave rise to it: in both cases, rooted in the desire of white
>> America to reject what all logic and evidence suggests is true.
>> Further, the selective branding of blacks as perpetual victims, absent
>> the application of the pejorative to Jews or crime victims (or the
>> families of 9/11 victims or other acts of terrorism), suggests that at
>> some level white folks simply don't believe black suffering matters.
>> We refuse to view blacks as fully human and deserving of compassion as
>> we do these other groups, for whom victimization has been a reality as
>> well. It is not that whites care about blacks and simply wish them not
>> to adopt a self-imposed mental straightjacket; rather, it is that at
>> some level we either don't care, or at least don't equate the pain of
>> racism even with the pain caused by being mugged, or having your art
>> collection confiscated by the Nazis, let alone with the truly extreme
>> versions of crime and anti-Semitic wrongdoing.
>>
>> Conclusion -- See No Evil, Hear No Evil, Wrong as Always
>>
>> White denial has become such a widespread phenomenon nowadays, that
>> most whites are unwilling to entertain even the mildest of suggestions
>> that racism and racial inequity might still be issues. To wit, a
>> recent survey from the University of Chicago, in which whites and
>> blacks were asked two questions about Hurricane Katrina and the
>> governmental response to the tragedy. First, respondents were asked
>> whether they believed the government response would have been speedier
>> had the victims been white. Not surprisingly, only twenty percent of
>> whites answered in the affirmative. But while that question is at
>> least conceivably arguable, the next question seems so weakly worded
>> that virtually anyone could have answered yes without committing too
>> much in the way of recognition that racism was a problem. Yet the
>> answers given reveal the depths of white intransigence to consider the
>> problem a problem at all.
>>
>> So when asked if we believed the Katrina tragedy showed that there was
>> a lesson to be learned about racial inequality in America--any lesson
>> at all--while ninety percent of blacks said yes, only thirty-eight
>> percent of whites agreed (18). To us, Katrina said nothing about race

>> whatsoever, even as blacks were disproportionately affected; even as
>> there was a clear racial difference in terms of who was stuck in New
>> Orleans and who was able to escape; even as the media focused
>> incessantly on reports of black violence in the Superdome and
>> Convention Center that proved later to be false; even as blacks have
>> been having a much harder time moving back to New Orleans, thanks to
>> local and federal foot-dragging and the plans of economic elites in
>> the city to destroy homes in the most damaged (black) neighborhoods
>> and convert them to non-residential (or higher rent) uses.
>>
>> Nothing, absolutely nothing, has to do with race nowadays, in the eyes
>> of white America writ large. But the obvious question is this: if we
>> have never seen racism as a real problem, contemporary to the time in
>> which the charges are being made, and if in all generations past we
>> were obviously wrong to the point of mass delusion in thinking this
>> way, what should lead us to conclude that now, at long last, we've
>> become any more astute at discerning social reality than we were
>> before? Why should we trust our own perceptions or instincts on the
>> matter, when we have run up such an amazingly bad track record as
>> observers of the world in which we live? In every era, black folks
>> said they were the victims of racism and they were right. In every
>> era, whites have said the problem was exaggerated, and we have been
>> wrong.
>>
>> Unless we wish to conclude that black insight on the matter--which has
>> never to this point failed them--has suddenly converted to
>> irrationality, and that white irrationality has become insight (and
>> are prepared to prove this transformation by way of some analytical
>> framework to explain the process), then the best advice seems to be
>> that which could have been offered in past decades and centuries:
>> namely, if you want to know about whether or not racism is a problem,
>> it would probably do you best to ask the folks who are its targets.
>> They, after all, are the ones who must, as a matter of survival, learn
>> what it is, and how and when it's operating. We whites on the other
>> hand, are the persons who have never had to know a thing about it, and
>> who--for reasons psychological, philosophical and material--have
>> always had a keen interest in covering it up.
>>
>> In short, and let us be clear on it: race is not a card. It determines
>> who the dealer is, and who gets dealt.
>>
>>
>>
>> * Personally, I have no idea whether or not Barry Bonds has used
>> anabolic steroids during the course of his career, nor do I think the
>> evidence marshaled thus far on the matter is conclusive, either way.
>> But I do find it interesting that many are calling for the placement
>> of an asterisk next to Bonds' name in the record books, especially
>> should he eclipse Ruth, or later, Hank Aaron, in terms of career home
>> runs. The asterisk, we are told, would differentiate Bonds from other

>> athletes, the latter of which, presumably accomplished their feats
>> without performance enhancers. Yet, while it is certainly true that
>> Aaron's 755 home runs came without any form of performance enhancement
>> (indeed, he, like other black ball-players had to face overt hostility
>> in the early years of their careers, and even as he approached Ruth's
>> record of 714, he was receiving death threats), for Ruth, such a claim
>> would be laughable. Ruth, as with any white baseball player from the
>> early 1890s to 1947, benefited from the "performance enhancement" of
>> not having to compete against black athletes, whose abilities often
>> far surpassed their own. Ruth didn't have to face black pitchers, nor
>> vie for batting titles against black home run sluggers. Until white
>> fans demand an asterisk next to the names of every one of their white
>> baseball heroes -- Ruth, Cobb, DiMaggio, and Williams, for starters --
>> who played under apartheid rules, the demand for such a blemish next
>> to the name of Bonds can only be seen as highly selective,
>> hypocritical, and ultimately racist. White privilege and protection
>> from black competition certainly did more for those men's game than
>> creotine or other substances could ever do for the likes of Barry
>> Bonds.

We have to keep trying to save Ham radio while we still can because once it's all the way in the shitter it will be even harder to pull back out & clean up.

A Ham who'll stand for nothing will sit for anything. I won't accept more dumbing down.

Help save Ham radio:

1- No more automatic renewals. Individuals must retest and pass all elements required for their license class every ten years.

2- The passing score for written exams needs to be raised to 85%.

3- Code elements should be 13 wpm for General, and 20 wpm for Extra.

4- Make the no-code license one year non-renewable.

5- Cancel your ARRL membership until they decide to work to improve things and stop them from proposing ham radio that is like CB.

If you can stick with PIN diodes.

They give better isolation when reverse biased that other types.

RadioShack 2.4GHz Wireless Stereo Headphones

- Wireless headphones might be OK up on Ruby Ridge or out in Milatoon,
Michigan or some such

- But in a crowded urban environment, Such as L.A, NYC or San Fran,
with Scads of wireless devices beaming round on the same frequency

your neighbors Cellphone / Computer noises

gets to be a bother . . .

They are objecting to listening to a station that is not crystal clear, with
fading and static, not to the tuning in of that station.

Terrible idea. The only way to get ARRL to change is to get involved in the
politics of ARRL and work to try to effect the changes that you want.

It is profitable where it is on a half decent signal, like Miami, San Diego,
Portland, etc.

Jeesh, lots of information, possibly a troll! Nope.

The batteries are Eton Ni-MH 1100 which came with the radio! I never got the batteries to charge correctly within the radio and ETON replaced the batteries as they indicated there were problems with some batteries. In fact I received them today, one day too late I guess. I am pleased that they sent out new batteries!

I charged them with the a charger which supports only Ni-MH type batteries. I have charged these same Eton batteries before in this charger with no problems. The internal setting are correct and the batteries were installed correctly.

It smoked, no fire, just smoke and that terrible smell that indicates your favorite bedside radio is fried. I just sent them an email and wonder what they will say. I purchased another one today on Ebay for $29.00 + 10.00 Fedex Shipping. I don't think I will be using rechargeable batteries in the new one!

I have a few of little portables and this Eton E-10 is by far the best
sounding of them ALL! I can pickup quite a few SW stations and it's been
great as a bedside radio which I use every night. I really loved the
timer and would set it and listen till,,,,,,,,

A sad but true story from pp. 69-70 of "The End of Iraq" by Peter W. Galbraith:

"As Cheney put it in an interview he gave after leaving office in 1993, 'Now you can say, well, you should have gone to Baghdad and gotten Saddam, I don't think so. I think if we had done that we would have been bogged down there for a very long period of time with the real possibility we might not have succeeded'."

Dick, Dick, Dick---you were exactly right in your 1993 statement, almost psychic, as a matter of fact.

How did you manage to lose your brains between 1993 and 2003?

Looks like "Dead-Eye" Dick's memory isn't much better than his aim!

The bodies of Iranian Revolutionary Guard soldiers killed by the Israeli army in Lebanon have been transported to Syria and flown to Tehran, senior Lebanese political sources said.

Israeli and Egyptian security officials confirmed the news, which follows a report that first appeared in The New York Sun, that Iranian forces posted to southern Lebanon have been aiding Hezbollah terrorists in their attacks against Israel, including helping to fire rockets into Israeli population centers.

The Lebanese sources said between six and nine dead Iranian Revolutionary Guard soldiers were brought in trucks last week into Syria for a flight back to Iran.

4083. Dirty Bomb Material Destined For Iran Intercepted

Newsgroup: rec.radio.shortwave
Date: 2006-07-25 02:44:02 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12cb1q0dq5mus26@corp.supernews.com>
Source record: 85216

Dirty Bomb Material Destined For Iran Intercepted

Border guards seized a British lorry on its way to make a delivery to the Iranian military - after discovering it was packed with radioactive material that could be used to build a dirty bomb.

The lorry set off from Kent on its way to Tehran but was stopped by officials at a checkpoint on Bulgaria's northern border with Romania after a scanner indicated radiation levels 200 times above normal.

The lorry was impounded and the Bulgarian Nuclear Regulatory Agency (NPA) was called out. On board they found ten lead-lined boxes addressed to the Iranian Ministry of Defence. Inside each box was a soil-testing device, containing highly dangerous quantities of radioactive caesium 137 and americium-beryllium.

The soil testers had been sent to Iran by a British firm with the apparent export approval of the Department of Trade and Industry.

Last night, the head of the Bulgarian NRA, Nikolai Todorov, said he was shocked that devices containing so much nuclear material could be sold so easily. He said: "The devices are highly radioactive - if you had another 90 of them you would be able to make an effective dirty bomb."

And a spokesman for the Bulgarian customs office, said: "The documentation listed the shipment as destined for the Ministry of Transport in Tehran, although the final delivery address was the Iranian Ministry of Defence.

4084. Lebanon Is Not Innocent

Newsgroup: rec.radio.shortwave
Date: 2006-07-25 02:45:06 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12cb1q276et8a29@corp.supernews.com>
Source record: 85219

Lebanon Is Not Innocent

...

Critics of Israel's defensive war against Islamic terrorists are busily wringing their hands over the destruction that has been wreaked on Lebanon, which is portrayed as innocent. They invoke these tragedies while calling on Israel to cease its fire and leave the Hezbollah aggressors intact. Since Israel had no role in starting this war, this is like blaming the Allies for the damage inflicted on Germany in World War II and doing so in the midst of the war. Critics who make such charges and demands in the midst of a war are aiding and abetting the aggressors.

...

It will be objected that Lebanon is helpless, that its democracy was destroyed and its territory conquered by the PLO, Hezbollah, Syria and Iran. It will be said that the Lebanese cannot resist the superior force of Hezbollah's "state within a state." But this is an argument in bad faith. No one is helpless. When France was occupied by Germany during World War II, DeGaulle organized the "free French" into a fighting force. The so-called "Cedar Revolution" showed that there are ways of manifesting opposition and resistance to the occupiers. Even though it failed, it showed that resistance is possible. If there is resistance to Islamic terror in Lebanon today, it is as invisible as moderate Islam. Put bluntly, while the Lebanese have demonstrated their resistance to the Syrian occupier in the very recent past, there has been no evidence of it when the aggressor is an Islamic force bent on obliterating the Jews.

...

The last stand of Western imperialism is the patronizing attitude displayed by Western radicals and liberals toward Third World Muslims and Arabs. If Americans taught their children to murder Muslims as a quick pass to heaven, the left would regard this as a crime against humanity. But if Palestinians are the perpetrators of such crimes and Jews are the targets, it's a different story. In this case terror is the only means (and therefore the understandable means) of a "desperate" people. Jews who have been told by Iran and Hezbollah that their extinction is imminent of course aren't desperate.

...

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23485

Malignant Neglect

Israel's hypocritical critics conveniently forget some recent history that places Israel's actions in proper context. Israel left Lebanon in 2000, after being assured that there would be an effective buffer in the southern region of Lebanon to protect Israel from any further terrorist attacks. Kofi

Annan at the time also sought to allay any Israeli concerns about Hezbollah's intentions. In a meeting with then Israeli Prime Minister Ehud Barak on June 21, 2000, Kofi Annan expressed faith in Hezbollah's leader Hassan Nasrollah. Annan praised Hezbollah's exercise of restraint, responsibility and discipline after the withdrawal and assured Barak that Nasrollah intended to continue exercising such restraint. (Source: The Jerusalem Post, July 19, 2006) UN forces on the ground in Lebanon were to be reinforced to help keep the peace. The Lebanese government was supposed to establish its authority in southern Lebanon and put an end to Hezbollah's de facto military control in the area.

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23490

In any normal country a junior coalition member that attacked a neighboring country without its partners' consent would be swiftly disavowed and ousted from the government.
...
The Lebanese army has even openly assisted Hizbullah during the past week's fighting. Hizbullah's successful missile strike on an Israeli naval vessel Friday night, for instance, would have been impossible had the army's radar stations not given Hizbullah the ship's coordinates. Hizbullah does not have radar stations of its own.

Far from repudiating Hizbullah's attacks on Israel, the Lebanese government has actively defended, facilitated and assisted them at every turn. There are thus no grounds for treating it as an innocent party in this conflict. And until the international community recognizes this, its efforts to resolve the crisis will inevitably fail.

Suicide Armies Launched

Teams of Iranian suicide bombers were heading for Lebanon's war zone last night in a terrifying bid to spark meltdown in the Middle East.

Twenty-seven martyrdom-seekers have been sent to Syria on their way to front line positions.

The mad fanatics, belonging to the Iranian Martyrs of Islam World Movement, have been training for months to wreak maximum havoc on military and soft civilian targets. Their aim is to spark terror which will detonate all-out war and suck Western nations into a final bloody showdown.

Not in the sense that you and the Wunderkind cuhulin are. Heterosexual
men such as Mr. Barnard and myself don't spend much time wondering just
how darn blissful you and the brassiere wearing ex Army pervert are.

Now that I understand your rather 'comfortable' relationship to the
Doggy Daddy, I can see why you have NEVER called him on any of his
insane statements.

As a public service to you and your lover, please be informed that,
besides the moral turpitude, there ARE dangers to your licentious lifestyle.

You're most likely correct on getting into the "politics" of the ARRL to "try" to get anywhere. But, good luck. It is more like a "good ole boys club". Anytime I've ever seen any reps to the area at a hamfest - they acted like snobs more than trying to communicate with hams of their concerns OR to try to win those hams who weren't members - to become members. If the rep couldn't give me the time of day, the ARRL didn't need my money either. I stopped my membership when it was due for renewal. That was a good 15 years ago or better. How did the rep act like a snob? He turned to his bud who was with him behind the table and ignored others "trying" to gain his attention and talk to him about whatever. Oh - he may look and say Hi, but god forbid you interrupt his conversation with his buddy. So much for the "MEET YOUR ARRL REP HERE"

Good article. I agree that FM IBOC is tolerable due to the capture ratio of FM. AM IBOC noise will mix perfectly with the alternate channel AM (analog) signal. It is a doomed system. I'm just amazed anyone with a technical background even considered AM IBOC to be practical.

The sign reads, "Instant Gratification". Buy the equipment and be
able to put it on the air immediately.

It wouldn't surprise me if, in the not too distant future, one will be
able to buy a ham transceiver, create call letters out of one's
initials or something and legally be on the air while waiting for the
real "ask for it and you get it for a fee" license.

During the daytime fading and static are not a problem. Static is not a problem at night either but fading is a night time problem for 60 mile plus stations from LA, San diego and further but no problem on the local stations.

See you want your cake and you want to eat it too. Day or night is not a problem on the locals, which according to you are the only ones to be considered. The only problem is distant stations at night, which have any fading associated with them and they don't count now do they.

So their is no problem with the stations that count for noise, fading or sound quality.

Ahh.. the 1977 solution.. first, middle and last initials followed by your 5
digit zip code....

4110. Women Have No Souls according to Syrian President

Newsgroup: rec.radio.shortwave
Date: 2006-07-25 04:40:45 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12cb8fj2foiv295@corp.supernews.com>
Source record: 85244

Women have no souls according to Syrian President

The father of Syrian President Bashar al-Assad, the late Hafez al-Assad, like his Iraqi counterpart Saddam Hussein, leaned heavily on the occult.

While Hussein consorted with the Jinn, the King and Queen of the desert sands, who he believed gave him immortality, al-Assad led a regime dominated by the belief that women do not have souls.

Al-Assad originated from the Alawite religious minority, though in essence a sect of Shiite Islam, is a world apart from Islam in doctrine and practice.

"The secretive faith in name indicating followers of Ali, son-in-law of Islam's founding Prophet Mohammed also combines elements of Christianity and astrology." (Apologetics Index).

Politically Bashar al-Assad is a chip off the proverbial old block. Shaped by his father's lifetime crusade against Israel, he has steadfastly resisted Israeli and American pressure to abandon support for Hezbollah.

It was the terrorist group's capture of two Israel Defense Forces soldiers and barrage of rocket attacks that sparked major Israeli military action against Lebanese targets for the first time since it withdrew from south Lebanon in 2000 after a 22-year occupation.

Bashar al-Assad finds an ally in Iranian President Mahmoud Ahmadinejad who has vowed to wipe Israel off the map. His alliance to Hezbollah has been called a "love affair".

Gary C. Gambill and Ziad K. Abdelnour, who wrote Hezbollah: Between Tehran and Damascus for the Middle East Intelligence Bulletin got it right back in February 2002:

"Bashar's love affair with Hezbollah is attributed by some observers to naivet. "A Syria that can be manipulated by Hezbollah, which in turn, under Iranian guidance, could well miss the crucial moment when Iran and Hezbollah attempt to spark a huge conflagration on Israel's northern border," says Israeli commentator Ehud Ya'ari, "A weak and na've Syria acts as an accelerator for Hezbollah, not a brake."

Elected president of Syria with 97.99 percent of the votes in a nationwide election on July 17, 2000 al-Assad is an ophthalmologist by profession. Once head of the Syrian Computer Society, an organization dedicated to developing an interest in computer technology among the young people of Syria, he also joined the Army, becoming a staff colonel in 1999.

The Alawite religion practiced by his father, a longtime president of Syria, is believed to date to the 9th century,

Peculiar to the Alawites is the belief that women do not have souls.

"Astrological phenomena also take on special meaning. There is a belief, for example, that the Milky Way is made up of deified souls of believers. (Apologetics Index).

The Alawites, at about 1.5 million strong in Syria and representing about 12 percent of the country's population, are considered by some to be a distant offshoot of the Shiite branch of Islam. Most members of the sect live in Syria, although there are scattered communities in Turkey and Lebanon as well.

Founded by a man named Ibn Nusayr, who declared himself the gateway to truth, the belief system of the Alawites has been a matter of speculation, rumour and suspicion from more orthodox Muslims of both Shiite and Sunni sects from their beginnings in the 9th century.

As secretive as the Masons in nature, only a small group within the sect is initiated into Alawite rituals and doctrine, but researchers who have studied the group say they drink wine in some ceremonies, incorporate elements of Phoenician paganism, and hold that Ali, the son-in-law of the Prophet Muhammad, is a divine. All of that is, of course anathema to conventional Islam.

Meanwhile, if there were ever two reigning presidents who live up to the old adage of "like father like son, it's Bashar and Hafez al-Assad.

... and new aircraft pilot license requirement: Demonstrate an engine start by spinning the prop -- by hand. Even if you intend to fly only jets, some old "prop-job" might be the only thing that can get through in an emergency.

I wonder: Did the radio amateur community go through anything like this for the transition away from spark?

I can't for the life of me understand why there is so much concern over

learning code. After 20 yrs in radiation physics (ionizing, not RF communications) as a living, I finally decided to go for an amature radio license. It wasn't until I got here that I learned about this rift in the community (I have seen it in a few places)....granted it may be a few spirited individuals on each side that perpetuate this argument of learning code. I'm very dismayed by this rift, I wanted to

join a fellow group of RF communication enthusianists. I don't need a segration here too...there is enough of that society already, I don't need that in a hobby too. I hear my family calling....thats were my time needs to be spent.

Sounds like a reasonable article except that he thinks DRM sounds OK. I
don't think it sounds good and is most definitely a step down from
analog in quality. DRM could sound OK if the bit rate was increased but
that does not solve the other drawbacks it has and is certainly not an
improvement over analog.

- Davis goes on to mention that the digital carriers are modulated
- as complex conjugate pairs, orthogonal to the AM carrier. This
- is done for the purpose of "minimizing interference to existing
- analog operations." This is true as far as it goes, but it omits
- some important details.

- The complex conjugate modulation actually does not apply to
- the primary digital sidebands, the ones upon which his attention
- is focused. More important, he does not mention that the sole
- purpose of this modulation technique is to keep digital noise out
- of analog receivers tuned to the host IBOC station.

BAD - So with AM "HD" {IBOC} Radio :

1 - You have the AM Analog Carrier and the 'in-phase' Analog Side
Bands

2 - Plus the 'out-of-phase' Digital Side Bands

Great for keeping the Digital Signal out of the Analog Signal
On-Channel.

-BUTT- Both numbers 1 and 2 cause Adjacent Channel interference
and result in twice as much Adjacent Channel Interference -especially-
when trying to hear a Distant {Weaker} AM Analog Signal.

No. The are way ahead of us on AM, realizing that it is mostly useless and
should only be kept for local service in the larger cities.

I have not the IBOC technical specification but according to the article
the secondary digital channel uses a modulation method that minimizes
interference to the analog carrier and sidebands of that same channel
and that the primary digital channel does not use that method.

Either digital channel can interfere with an adjacent channel.

The only DRM I've heard is from their website, and it wasn't very good.

Do you recall that story about the Dumont TV. Dumont would take a good TV, lets say a Philco. Dumont would pull out tubes until it didn't work anymore, then put back that last tube. [OK, it was supposed to be a joke.] I think these digital radio companies increase the compression until everyone agrees the sound sucks, then they back off the compression a little.

4121. Be Safe - Be Wise - Use the Right type of Charger with the Right type of Battery

Newsgroup: rec.radio.shortwave

From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1153809330.019403.3580@i42g2000cwa.googlegroups.com>
Source record: 85305

Sanjaya,

Standard Alkaline "AA" Battery about 1.5 VDC

NiMH and NiCad "AA" Battery about 1.2 VDC

Going from Alkaline Batteries to NiMH or NiCad
Batteries should not produce any bad results other
than slightly less performance.
= = = 6.0 VDC down to 4.8 VDC

However, for a Radio Designed or Set-Up for NiMH
or NiCad Batteries inserting and using Alkaline type
Batteries could cause some possible problems
= = = 4.8 VDC up to 6.0 VDC

If the Radio is Designed to use a built-in NiMH Battery
Recharging Circuit with the installed NiMH Batteries.
Then using an External NiMH Battery Charger should
with NiMH Batteries should not be a problem.

The key 'safety' problem with NiMH Batteries seems
to be when some one tries to Re-Charge them with
a NiCad Battery Recharger. Then they can overheat;
get very hot; start a fire; and/or explode. -But- They
usually only charge up to 1.2 VDC and if they are OK
after re-charging; can be installed into a radio and used
safely. Repeating the process several time may not be
the smartest thing to do...

Be Safe - Be Wise - Use the Right type of Charger
with the Right type of Battery.

Yeah, it is sucky low bit rate audio. That's what it is and to say other
wise is just dressing up a pig.

> Do you recall that story about the Dumont TV. Dumont would take a good
> TV, lets say a Philco. Dumont would pull out tubes until it didn't work

> until everyone agrees the sound sucks, then they back off the
> compression a little.

Because audio is a continuos stream of data the resolution of the
digitized audio is determined by the bit rate or information flow rate.
Some people think that compression can send a higher information rate
through a link or in other words artificially increase the data rate
with no consequence to the original data stream. You have to accept a
level of distortion for a level of compression. Compression trades an
increase in data rate for a alteration of the program material. Photos
don't look as good when they have been compressed and audio does not
sound as good when it has been compressed. That's just the way it is.

Telamon,

First you have the existing Analog AM Carrier 'on-channel'
with it's Analog AM Side-Bands causing Interference with
the Adjacent Channels.

Second with AM "HD" {IBOC} you have the 'out-of-phase'
Digital Side-Bands causing MORE Interference with the
Adjacent Channels.

To me this means - Twice as much Interference to the
Adjacent Channels resulting from both Analog and
Digital Side-Band Signals.

doubly (2Xs) bad news for am dx'ers ~ RHF

I've seen transcripts on Google done by a Tom Valentine. I was wondering if this is the same Tom Valentine that used to post in Rec Radio Amateur Misc and if so does he have an amatuer license and to go a step further what his call sign is ? I believe this Tom Valentine broadcasts on SW as well, though I could be wrong on that ?

TIA Gary

I remember Dumont sets being fairly good. I had heard that story told about
Xonix sets back in the late 60's and early 70's.

Personally, I would rather have the First Class and Second Class Radio Telephone back. Thank the broadcasters for lobbying to eliminate that requirement -- ironic that the industry has been sliding ever since (go figure) --
and of course -- this happen at the same time that personal computers for business usage were expanding, LAN for the PCs & cellular telephones introduced, and AT&T was broken up (1984 Judge Green order). SO -- the best "talent" left the industry (since the industry no longer wanted to pay for it).

Re-read, please. I said, "You are tuning the AM dial to see what unusual
thing you can get."

In other words, you find some distant station, like listening to KOA in
LA... a reasonable clear signal for a DXer, but horrible for a non-DXer due
to fading, static bursts, buzz every time you go under power lines, etc.

For Sale a very nice Sencore Mighty Mite III, T130, tube tester in very good condition and it works good. Comes with the original manuals. It will test many useful tubes such as radio tubes and audio tubes 7199, 6550, 12AX7, 12AU7, 6DC6, 7868, 6BQ5, Etc It tests for Emission, grid leakage, and shorts. A great little tester and easy to use. Buyer pays shipping. Price is $55. Thanks, Charlie Hugg, K5MBX

doubt it all you like

figure the path with any precison no, but I am can use the various
charts to know know I need to contact various types of stations

theseday 100w a 13b2 a preamp and you are able to pick up the larger
stations, and they can hear you

why do Ineed to be figure the path loss when I can determine the
parameters for sucess.

I honestly don't care how much of the signal islost along the way

I care wether a readble signal reach the otherside

Hi Brian,

I'll guess and say carrier; the receiver is an ICOM R71A in the RTTY
position, feeding the audio into a Universal M-7000 decoder, and then
to a video monitor.

//John

Hassan Nasrallah: "I Told Them [Lebanese Political Leaders] That We Must Resolve the Issue of the Prisoners, and That the Only Way to Resolve it is by Abducting Israeli Soldiers"

Interviewer: "Did you inform them that you were about to abduct Israeli soldiers?"

Hassan Nasrallah: "I told them that we must resolve the issue of the prisoners, and that the only way to resolve it is by abducting Israeli soldiers."

Interviewer: "Did you say this clearly?"

Hassan Nasrallah: "Yes, and nobody said to me: 'No, you are not allowed to abduct Israeli soldiers.' Even if they had told me not to... I'm not defending myself here. I said that we would abduct Israeli soldiers, in meetings with some of the main political leaders in the country. I don't want to mention names now, but when the time comes to settle accounts, I will.

"Today, we Shi'ites are fighting Israel. Our fighting and perseverance ultimately serve our brothers in Palestine, who are Sunni, not Shi'ite. In other words, we, Shi'ites and Sunnis, fight side by side against Israel."

"For 23 years, we have been talking to our people, motivating them, talking about martyrdom, the honor of martyrdom, and the place of the martyrs. Do the Zionists, or those who encourage them, believe that I, or anyone in the Hizbullah leadership, fears martyrdom? We love martyrdom. We take precautions in order to prevent Israel from making any gains. But on the personal level, and as a personal aspiration, each and every one of us hopes to be destined to martyrdom at the hands of those people, the killers of the prophets and the messengers, and most hostile to the believers, as it says in the Koran."

Remember also that most reps are elected by the few who bother to vote
for them. Most are unopposed. Sort of like politicians.

Check radio.rec. scanner group talking about joint excerise off of
Alantic coast. For the second consecutive day, the RAF E-3D AWACS
aircraft has
departed MacDill AFB and says he is "heading to W-122 to work with
Giantkiller for JTFEX-06."

OK, well now that explains why I thought I was hearing Chinese up on 6219.5.
Apparently it must have been Japanese as they (JASDEF) are supposedly in this exercise as
well.

SC - 10-4 Good Buddy ! :o) ~ RHF

I give Honor and Respect to any Amateur Radio {Ham} Operator :
Who has built and uses his own Receiver and CW Transmitter
for regular CW use. I will gladly read their posts and listen to
their arguments as to "Why" CW is important to the ARS.
- BUT - "IF" all they have every done is bought ready-made
equipment and claim that CW is necessary to the ARS
- please don't waste my time.
.

In response to my claim of my first EME contact someone in RRAP came back with "I doubt you can caluate the pathloos on an EME path (or words to that effect)

You know what I can't calualte that path loss

Indeed I would discourage anyone from trying to calculate it before trying the path what I have heard about those numbers is pretty discouraging

Why can I make such a contact when other say they can't or that I can't?

simple becuase I always KNEW I would, from the first monet I heard of EME contact which was from a question on Tech test back in 97 (I had heard a few days ebfore that No Code License existed I ordered the study but it arrived only the VE session so I tired the test cold KNOWING I would pass it then or next week or..) at the monent knowing nothing more than that such a contact was possible with my license I swore I would make one (or more)

I read the about the mode in detail and soon (in 97) realize I would likely have to wait awhile to keep that vow, but from time to time I renewed my efforts at first in data gathering a new milestone 2004 when I heard about the results with JT modes I began to pracetice with the early ones in terestial contact then last winter I learn of current jt65b mode and the details of the power and anttenna requiement abit of agonizing over wether I wanted to work with crushcrafts 31 foot 17b2 that I KNEW would work but that I have trouble steer or keeping safe in our harsh winters or the 13b2 I thought might work (and it did work like a charm, which it is in some sense of course) figuring I could always use it in terrestial modes and that I could later phase it with a second one and be assured of sucess then

but ALWAYS in mind was the KNOWLEDGE and assurance that I WOULD suceed and that even if I had failed now it was merely a lesson learned , part of paying my dues as it were

I knew I would one day be able to do it

I know anybody reading reading these words can do EME if they poccess 2 things

the will to reach for the Moon
the confindence to not count the obstacles

You have MY call on it KB9RQZ (sone to be /AE)

if you can't the data drop me a comment here or

So, lobby Congress to set up a grant system so that local governments
can buy out the stations and set them up municipal information broadcasts
for homeland security and the like. Given what's on some of the stations
here, the local high school could do just as good a job programming them.

Well, the technical details of the stuff broadcast isn't that much
different. There's not going to be much content in the 9-15 kHz
frequencies in (what an old recording engineer who used to work at
A&M called) "that pop crap". He said that if they had problems cutting
a master disk, they just whacked off the high end until the cutter head
amps were happy, and none of the producers seemed to notice.

So it must be the current set of really crappy AM radios. Or the
processing that the stations (over)do.

Construction/design skills and operating skills are two different
things. What does one have to do with the other?

Did you build your own car? Dishwasher? Toaster? Razor?

Bill, I had a master machinist work for me in the 1960s. He could make ANYTHING!!

I asked him if he could make a car. Sure!! His reply: "All I need is a block of steel 6X6X20 feet, a large milling machine, and a large lathe."

He was a Ham Radio Operator, Collins stuff of the 60s.

why try again?
that is what is insited on by the CW advocates along with anybody that opposes the requirement is lazy or wnat to turn the ARS into CB no proof no evidence just mantras

Id rather answer what does a CW test show about my abilty to operate on HF when I have no intention to ever use CW. I d love an answer to that question but I will nver get it either

You can always stack the deck of possibilities in favor of an argument.

Lightning is not a problem for me because it does not happen very often
in southern California but I could see that being a problem in other
parts of the country. I expect that if the lightning storm was a
energetic one FM would also be affected.

FM does better in a office building because it is broadcast on a 100
times shorter wavelength that can penetrate the non-conductive openings
to where you are located inside the building. This is no argument for me
at home or in the car but like you I listened to FM with the radio on my
desk at work for the same reason.

Digital mode AM is not going to make a difference on a office building
penetration over analog.

Now wait a minute. Here I am doing my best for discussion purposes
buying into part of your theories on what is important in AMBCB and you

try to slog the discussion back to DXing. I'm not buying into debate tactics.

You made an real world listening situation comment and I, using your own reasoning, dismissed it based on your own market rationalizations on what stations I should be listening too. Using your reasoning the local stations have strong signals that sounds good on the average car radio and not sound noisy. The other people in the car would not object to listening to local stations.

I don't DX AM radio stations in the car. I listen to distant stations, when they sound good, for the program material. I'm a program listener not a DXer.

If KOH in Nevada was coming in with a strong signal at the time other people in the car have not had a problem with listening to it. If started coming in poorly I would change the station to one that was coming in well local or distant. I don't expect people that are not into radio DXing to listen to a poor quality signal.

It makes no difference when listening to FM analog, FM digital, AM analog, or AM digital if the signal is poor for any reason the average person is not going to listen to it. Going digital or using a different band are engineering exercises at solving different issues other than just reception. Arguments to the contrary are nonsensical.

BT - One Word : "Amateur" {Ham} as in Operator ~ RHF

All 'others' for the most part are 'appliance operators'
just like so many CB'ers - IMHO.

Yeah, an opinion based on "stacking the deck" to favor your opinion. You
set up a circumstance that was not a part of the discussion, which was
listening at home or in the car.

Make it move? Make what move? I think the idea is to add channels or
streams while the current stations keep what they have maintaining the
status quo.

> FWIW, if radio stations really *are* serious about this "digital AM"

I'd call it BS-M and *if* they were serious they would present a system
that was an actual improvement over the present analog system.

IBOC blows. If you are going to make the change to digital split the band and make half of it digital or better use a different band. If the bean counting think goes with the "only good station is a local one" based on an advertising model then pick a band that does not propagate long distance while you are at it.

It is being marketed as HD Radio, irrespective of the band.

In this case, I am discussing what is acceptable reception to some is not to
others. Those used to "the old days" of listening to out of market AMs at
night have a tolerance. the younger generations do not.
>

I was only saying that tuning to an "outside station" is acceptable to
traditional AM users. To all others, it is not.
>

If it is way out of market and on skywave, I would argue that it is DX.
Distance = DX.

We may be saying the same thing. I agree here, entirely.

The changes to HD are not intended to improve reception. They are intended to improve the perception of quality.

We were handed AM. We don't like the fact that it has skywave, which has not
been particularly helpful since TV took over evening entertainment.

The reason AM became outmoded is that the FCC itself could not decide
whether to allow regional or national coverage or to promote localism... so
they never allowed US AMs the amount of power needed to really be anything
but a local medium.... and licensed thousands of lower power stations that
only find that skywave creates interference that reduces coverage.

WTF indeed. Read the thread. Did I write day time and night time was the
same? Noooo.

Since you won't or can't I'll explain one last time for your greater
than average comprehension needs. The discussion was about home and car
AMBCB listening and you added listening in an office building. The
thread is about IBOC (read the subject line). I state that IBOC is not
an improvement and David thinks it is. We both write about scenarios
about listening in a car. Then you jump in sniping the thread about
listening in an office building. You were just introducing new thoughts
that were a little discontinuous to what was being discussed.

> You were the one claiming that local AM had no problems at night!

> than to "digital AM", for all of the above reasons!
>
> Reading is *so* fundamental.

You have a real comprehension problem about what you wrote so here you
go from a few lines above.

"That's why I'd rather see it move to FM than to "digital AM".

And now going back through the thread to see what you previously wrote
and sniped I see you mean the program material.

So basically you don't know how to snip appropriately either.

Ok then who is responsible for perpetuating the continued use of a band
that has long range propagation?

When things started out decades ago the night time long distance
propagation was desired, then at some point the FCC wanted the use of
the band to be local and changed rules to favor that. Now that it is
proposed to continue the local over distant usage AND going to a new
mode requires that everyone buy new receivers why not change the band to
a frequency range that does not favor distant propagation?

What is the point of making a mess of the current AM band? The status
quo could be maintained by giving the current AMBCB holders of licenses
first dibs on the new band.

There are all kinds of solutions out there. Former TV analog band space
could be used for radio or as a sub channel on digital over the air TV.

That story was originally told about Mad Man Muntz. And it involved all of the components, not just the tubes.

DuMont's were pretty good sets. A.B.D. was, for some time, ahead of everybody in building large CRTs. You really must see a 30" DuMont Royal Sovereign from about 1951.

Yah friggen right, NOT! Continuing to stay knowledgable and re-testing won't improve things? Sheesh!! What's your problem then, If licensees remembered what was on their exams ten years ago passing the exams again should be a breeze. Of course, if they don't rememeber, they'll have to study again. This will make better hams. And the fact that this requirement has never existed in the history of ham radio doesn't make it a bad idea. You're just Lazy.

>>
>> 2- The passing score for written exams needs to be raised to 85%.

It DOES make a difference. It maintains the number of ways we can exchange information, and as a filter to keep out some of the riff-raff allowing you better enjoyment of the service.

>>
>> 4- Make the no-code license one year non-renewable.
>>
>
> Probably wouldn't make any difference.

Of course it WILL make a difference! It creates an incentive to keep studying and building on radio knowledge & skill by requiring an upgrade after a year. And we end up with more knowledgable hams. How can that be bad?

>>
>> 5- Cancel your ARRL membership until they decide to work to improve

The ARRL knew what it's members wanted before restructuring through surveys of the membership, then did you read the proposal that came out with? Totally opposite of the feeling of the membership. Google it, we discussed it long and hard years ago when RRAP groupies actually argued policy. The ARRL is only interested in padding the corporate bank account, they don't care about the quality of amateurs getting licensed. Our HF bands can sound like CB if means the ARRL can get more money. The ARRL BOD stapped Hiram Percy Maxim in the back. The ARRL doesn't care if you know anything about radio.

The FCC. Just the same reason why we never considered Eureka... the band is
in military service in the US. The same reason Long Wave is not used in the
US. And so on.
>
> When things started out decades ago the night time long distance
> propagation was desired, then at some point the FCC wanted the use of

Actually, if you peruse Broadcasting Magazine going back to the late 30's,
you find a couple of decades of indecision on the part of the FCC. When
there were few stations, when the bands were reallocated in around 1932, the
FCC established the clears because there were so few local stations yet.
Then, after the war, they doubled the AMs in 4 years, and kept postpoing the
upgrading of clears to 500 to 750 kw. Eventually, this became a written (via
administrative law) position of favoring localism over broad coverage. This

changed even FM, where power limits of 50 kw or 100 kw (by zone) were imposed where up to 500 kw had been earlier authorized.

So, through the 70's, many, many local stations were authorized, FMs were dropped in power caps, and only the 24 1 A clears survived, but at the low power of 50 kw. By the end of the 70's, even the clears were broken down to give new local servi ce, mostly in the west.

>Now that it is
> proposed to continue the local over distant usage AND going to a new

And what frequencies would you use? And that would obsolete existing radios, which HD does not do.
>
> What is the point of making a mess of the current AM band? The status

But, in the way the AM band is used today, it does not make as big a mess as everyone complains. I have seen several recent RW articles in which skywave is still defended as the reason why HD is not a good idea. These experts do not understand that, starting with the FCC in the 40's, skywave is no longer relevant.
>
> There are all kinds of solutions out there. Former TV analog band space

The TV band is going to be auctioned off for new technologies and the FCC plans to bring in billions. Giving licenses for new "AM swaps" in Bemidji will not come anywhere close to that, so it will not happen.

Further above you asked what frequencies would I use and the last
paragraph I previously wrote answers that. I don't see why some of the
old TV band could not be used for a new commercial digital radio band
that normally would not propagate out of the local area. Antennas would
be smaller like the current FM band.

The hybrid IBOC is temporary and the analog will portion will be done
away with anyway so existing radios will be obsoleted.

The FCC is not going to give up multi-billion dollar frequencies for a few
dollars. They already have a plan and demand for the TV channels, and this
is pretty much set in cement.
>
> The hybrid IBOC is temporary and the analog will portion will be done

Probably not for a decade, if that. There is no sunset law on it going all
digital... unlike HDTV.

4204. Re: FCC, Media and Ownership.

Newsgroup: rec.radio.shortwave

Could someone refresh my memory on just how many media outlets a
corporation can own in one market?? I seem to have lost track of the
FCC rulings on that subject.

It would seem that, at least with regards to radio, this kind of
decision will have a huge impact. If radio is truly a personal medium,
then it becomes very hard for a large corporation to continue to meet
the needs of the immediate community. I'm not sure how a ruling in
favor of the large conglomerates would affect small town America, but
certainly it would have an effect on those smaller stations that are
based around major markets. That would seem a shame to loose the
personal input and local flavors of those smaller stations - in favor
of a bigger signal. Local businesses opting to spend their advertising
dollars with the larger signal stations - i.e., those that reach
50-100 miles - would be a waste for that business if they only pull
their customers from 10 - 15 miles away. So, then maybe the point to
bring up to little stations is that your sales staff needs to do a
better job educating the local businesses.

But it is the almighty dollar that wins in the end - so the FCC needs
to find a way to help smaller stations stay afloat while not loosing
the revenue that the larger corporations can generate. It is much the
same for newspaper outlets. Around here, the local papers have all
been bought up by Liberty or Daily Herald. There really aren't any
local papers anymore in this area. Somehow, this problem is sounding
much like the WAL-MART dilemma. So, question is, what do we, grass
roots America, do about it? How do we present our case to the FCC
without "expecting you to hire a $500 an hour lobbyist
> to get heard" ???

Not hardly. Every time they change the pool, I get an up-to-date study guide just to keep current and see what's new. Could pass the test any day of the week and twice on Sunday. By the way the exam has changed in 10 years. There is some common stuff but there is also new stuff.

However, the biggest problem would be manpower for conducting the tests. Based on the current number of hams, that would be over 60,000 people retesting every year. The existing test system (and the prior systems when things were administered by the FCC) were all designed around the single testing concept. Essentially, it would mean almost every VE team would need to conduct test sessions weekly or hold huge test sessions monthly. There just aren't enough of us to do that. Plus many facilities now charge for the use of the facility. And the bigger the room, the higher the fee.

I believe in keeping a basic test simply because a person can't determine if they will like code until they've tried it. Plus it is one of the basics of radio. If they have the basics and have thus learned it is not a big, scary hurdle, they will be willing to pursue it in the future since they already know it at a basic level.

The filter argument, I consider totally bogus.

Code is either a basic part of ham radio or it is not. That should be the criteria for determining if it should be tested.

In today's climate, it will not be an incentive. Those who want to upgrade don't need the non-renewability clause. The rest will simply let their licenses lapse. Those who would let it lapse aren't on the air enough to contribute anyway.

So why don't you go run for office and promote your platform? Or form your own lobbying group? Complaining here won't get it done. If you want your platform to prevail, the YOU have to do the work to convince people. While the ARRL proposal was not what I wanted, it did indeed reflect some of the things that a significant percentage wanted.

As far as the ARRL padding the corporate bank account, if that is true, then you need to report them to the IRS as non-profit organizations are not allowed to do this.

It is complex. Basically, for radio it is 8 stations in markets with a certain number of facilities, with a sub cap on AM and FM. In smaller markets it goes to fewer stations. Markets are now determined by Arbitreon market definitons, with non-rated markets using coverage overlaps and some additonal criteria. There is an FCC short course at http://www.fcc.gov/cgb/consumerfacts/reviewrules.html

> It would seem that, at least with regards to radio, this kind of

I would agree in some cases. However, each station has its own program director and staff, and each competes with every other station in the market. Since most good PDs know that local involvment is key in adult demos, this does not suffer, or the station goes down in ratings.

> I'm not sure how a ruling in
> favor of the large conglomerates would affect small town America, but

> based around major markets.

Most of what is being debated is to let newspapers own electronic media. This may have tow benefits: it can save many newspapers that are failing and it can provide better news coverage to the radio and tv stations they might own.

> That would seem a shame to loose the

> better job educating the local businesses.

There is not going to be any change in radio ownership, if you believe the predictions. What might change is the newspaper aspect, and a lowering of trhe caps in smaller markets or a redifinition to non rated markets that makes them smaller and allows fewer stations.

>
> But it is the almighty dollar that wins in the end - so the FCC needs
> to find a way to help smaller stations stay afloat while not loosing
> the revenue that the larger corporations can generate.

Small stations are small stations, no matter who owns them. They are either inferior facilities in bigger markets or stations in smaller makets. Any change will not affect technical operations and power. It will effect who can own what in each market area. A small station owned by a big company is still a small station.

> It is much the
> same for newspaper outlets. Around here, the local papers have all

Newspapers are consolidating because the business is shrinking badly, and many papers are losing money. Only by combining infrastructure can most survive... or by owning cash flowing electroinc media outlets.

There are some grandfathered ones, but it is currently prohibited for new
purchases.

The FCC policy since the later 40's has been based on localism, so this fits
the stated policy.

Hmm yes i can and do listen to CRI without having the urge to throw the radio out of the window.VOA is soooo blatant in its properganda its not funny you dont see this on CRI i couldent speak about radio havana because unfortunately they dont broadcast here (although i would be happy if there is link to listen to it online).

Voice of korea is so blatant its funny, its even got a cult following of sorts amongst people who dont support DRPK, but listen to it because its so overtop and oversold its hard to take seriously and is actually entertaining.Ive listen to a little of the radio from south korea, its ok and radio japan is good to at times it can be a little too fluffy for my liking.

BBC world service is top shelf i listen to that EVERY DAY ditto DW radio. I must listen to radio phillipines one day its seems a little elusive. :)

I'm not sure it was a Royal Sovereign, but when I live in St. Louis in 1967-68 there was a 30" Dumont set in the basement of our apartment building. Very impressive indeed, compared to the typical 21" B/W set of the time.

See the Dumont Royal Sovereign in person at the "Early TV Foundation"
in Hilliard, OH (near Columbus) or take a look at:

http://www.earlytelevision.org/american_postwar.html

Look under the heading "1950-1960 Sets".

Uh, no. I haven't found a way to ingest radio broadcasts, but possibly
you have. I would imagine if you ingested enough written reports from
any source they would give you a serious case of indigestion.

> I was listening to it and

Which news sources give just news that is completely free of bias. I
have yet to find a news source that isn't biased because of the country
the broadcaster originates from. Our view of the world is influenced
by our country of origin.

As opposed to making a ham license something anyone can get merely by
asking for one - because, like you, they don't have the intelligence
to pass a real test.

Hi Carter,
That 30 incher must have been impressive back then. The biggest B/W set I ever saw in the early fifties was 21 inch. I think there were 23 inchers. By the way since Muntz was mentioned I'd like to add that I met Mr. Muntz about 25 years ago here in San Diego. He was making wide screen sets--the kind with the lenticular screen and a mirror. When I told him I was from Detroit (his home town too) He told me all about (condensed version of coarse) his history in manufacturing. He showed me the car he made but didnt sell too well.
Short fat guy that liked to talk.

No it wouldn't; you've stated yourself that there's
no movement to replace the analog streams with
digital, but rather it's an addition to the current
service.

I'm still waiting on that one happening. There are still
plenty of people out there who haven't bought their
new digital TV yet, technological improvement or not.

No Congressman wants to be seen as blowing off a
big constituency like the elderly on a fixed income
who can't afford the new sets; Congress will keep
extending the deadline until enough old televisions
have died off to make it practical.

Aside from that, the way other prices have been rising
lately I don't think that people will be putting a digital
converter or a digital television at the top of their "to
purchase" list anytime soon.

They have developed a plan to provide digital cable converters to anyone for
free. Makes old sets totally usable via downconversion of digital to analog.

That'll be interesting, but they have to fund it and
advertise it first. I can't see the big box stores being
too thrilled about it, either, since it means that the
people who might consider upgrading their television
now will wait for the freebie.

I passed my 5 wpm code back in the 60's and later 13 and finally a few years back 20 wpm but I side along with those who don't see code as needed for an amateur radio license requirement.

Use of CW in the ham bands has diminished significantly over the years. The NTS Traffic nets and contests still hang on to the mode but general use on a weekday outside of a net or for some dxers is very sparse. I seldom use it myself.

Why test for one mode of operation when there are many other modes that can be used and these are not necessarily tested in the license exams? To single out CW as a must test mode of operation seems silly in this age.

60 years ago when CW was as popular as AM (No SSB in common use yet) I can see the test requirement, here in the 21st century no.

Doesn't Eureka's problems suggest that there is no strong demand for digital radio and the digital buzzword has no value?

Eureka's problems may be many, but that it's digital isn't one of them.

In today's market the digital buzzword is EVERYTHING.

I've seen toasters with a "Digital" applique across the case.
Referring to the light/dark gradient display, but digital nonetheless.

Say the word 'Analog' at a trade show, today, and you get stares like
you were Crispin Glover's haberdasher.

Considering the way the feds are spending money,
I doubt that weighs heavily on their minds.

The question was not if you "could" build you own car, it was "did"
you.

Nope. It's "Amateur Radio Operator", not "Amateur Radio Constructor".

I'll ask again: What does construction skill have to do with operator
skill?

Ah, then IBOC has come at an opportune time. If they had introduced it back in the seventies, HD radio would have merely been "Lemon Scented".

Exactly. But more to the issue, is that FCC mandated that any new
modulation schemes for broadcast, AM/FM/TV must be digital.

IBOC was inevitable.

If they had introduced it back

The idea was that they were able to handle the extreme sound frequencies that were reproduced more easily with CDs better. Considering that the regular RS headphones were pretty darn restrictive in frequency response, that's not a surprise.

Speakers. Headphones. Amps. Receivers. There was a panoply of devices
that were tagged as 'Digital Ready.'

Same products, but now perceived to be 'new and improved.' And this
wasn't limited to RS. It was everywhere.

In many cases, still is. Sony still markets a like of 'professional'
headphones branded "Digital.'
```

Funny you should mention that. Back in the late 70's I went to a
presentation by Intel on the 8085. One of the applications they
suggested for it was toasters!

LOL... yeah, I could tune one to 790 and the other to 770. Then, just for kicks, I could
put the SR
III in the back of the room on 780 for the center channel.

No, it suggests the transformation to digital is best done with an in-band
transition, such as FM to FM stereo where there is backwards compatibility.

well, maybe i've got something for you.

the german tv-station "ZDF" - it's sth like like BBC - is looking for the most beautiful place all over germany. it's an internet-vote, and the viewers are allowed to send their own places.

so we did it. we are a non-commercial campusradio from aachen, near the dutch border.

we send in a place which is used to be a meeting-point for the homeless of aachen. now this place is fighting against places like the reichstag, neuschwanstein or the "brandenburger tor".

but we need assitance to get that place on top. maybe you can help an take revenge for the hamann-bridge?

here we go: visit http://vote.orte.zdf.de/. i'll try to get you a "how to", beacause the page is in german, as you possibly may imagine.

so, visit this page, make sure you have checked the box beside the word "zuschauervorschlaege" on top. then you'll see the list of places. the 4th from top is called "Aachen, Rondell an der Wüllnerstraße". that's our place. just click on "abstimmen" and give a random name and adress. at the box "PLZ" you may type the number "52062" and at the box "wohnort" you can type "aachen", e.g.

just make sure that you type in a valid mail-adress, because you'll receive a mail with a link. if you've clicked on that link, your vote is finished.

and germany may get a meeting-point for the homeless as the most beautiful place... let's hope!

thanks for the attention :)

ps: if you like to see a picture of that place, visit http://beatritze.twoday.net/stories/2420155/

4289. Recommendation (new radio, return, Sony vs. Kaito, etc.)

Newsgroup: rec.radio.shortwave
Date: 2006-07-26 20:03:02 UTC

Message-ID: <1153944181.933667.268890@h48g2000cwc.googlegroups.com>
Source record: 85426

Hi everyone,

I'm new to this list and shortwave (SWL). I have an interesting twist to the age old question, "what's a good first radio" (Yes, I did search the group before deciding to post).

Okay, I decided I wanted to get into shortwave listening (after hearing an NPR report on numbers stations). I'm primarily interested in listening to major broadcasts (BBC, VOA, VOR, VOK, Radio Netherlands, etc.) and maybe the occasional numbers station, if I can find one.

In terms of electronics, I tend to subscribe to two schools: buy the absolute best OR buy the cheapest thing that will get the job done (middle of the road stuff tends to be over priced given the feature set). Well, after a little reading, I opted to buy the Sony ICF-SW7600GR. I received the '7600GR a few days ago, and the radio appears to work well.

The '7600GR was relatively expensive, and I'm not sure if I'll use it enough to really reap the benefits of having a top-quality portable. The Kaito KA1101 (Degen DE1101) got a favorable review in the 2006 _Passport to World Band..._ and at other SWL sites online, and I'm beginning to wonder if I should have went the "cheapest thing that will get the job done" route, especially since I'm so new to SWL. Furthermore, I'm thinking of getting an antenna, and the Sony AN-LP1 (which apparently pairs well with the '7600GR) is about $105 delivered from Japan (on eBay). I can order a KA1101 with the KA31 antenna for about $100 delivered, which will save me well over $100 (more like $160) when compared to the '7600GR + AN-LP1 combo.

On to my question, should I return the '7600GR? Will I notice a big (unfavorable) difference in performance in the KA1101? Is SSB and sync lock really necessary for my interests. I'm having a hard time with this decision, so any input or recommendations are welcome---$160 is a lot of money for me, especially if the KA1101 will work well enough for my purposes.

Thanks,

Gus

Well, I think we have WAY too many MW stations in the USA.

A serious deletion of about half the stations out there - and moving them to FM - would be:

1) Beneficial for the affected stations, since they would be on a band that has better penetration into office buildings, better sound and resistance to static. This makes them more attractive to advertisers.

2) Beneficial for the remaining MW stations because the band will get less cluttered. This will enable them to raise power and serve wider geographical areas, especially in large metro areas where the city has spread out beyond the station's daytime signal.

Think of how much a 50,000 watter could benefit by climbing to 100,000 or 500,000 watts and a 5,000 or 10,000 watter by moving to 20,000 or even 50,000 watts!!

You also will have less need for these weird-ass directional antenna arrays, where you're trying to protect this station or that station on adjacent or co-located channels.

Canada could cooperate by eliminating their "reserved" allocations, so that transmission restrictions on USA stations could be eliminated. Why hang on to these allocations if you're not going to use them anymore, you know?

Obviously this won't be doable in cities where the entire FM dial is taken up, but for moving an isolated low power (1,000 watts and below) small-town AM station or two onto a semi-empty FM dial it would be perfect.

Also, daytime stations should be returned to DAYTIME ONLY! What is this nonsense of night-service from former daytimers with only a watt or two....or even 5 or 10 watts? In congested areas you can't go out too far anyway and the electrical noise will kill you.

The clear channels should remain CLEAR.

AM radio was never meant for strictly local service. It has too much coverage range, especially at night. It's better suited for

long-distance broadcasting.

Ideally these long-range AM stations should also be networked in order to provide seamless coverage across the country. Let FM do local service.

Well, I think we have WAY too many MW stations in the USA.

A serious deletion of about half the stations out there - and moving them to FM - would be:

1) Beneficial for the affected stations, since they would be on a band that has better penetration into office buildings, better sound and resistance to static. This makes them more attractive to advertisers.

2) Beneficial for the remaining MW stations because the band will get less cluttered. This will enable them to raise power and serve wider geographical areas, especially in large metro areas where the city has spread out beyond the station's daytime signal.

Think of how much a 50,000 watter could benefit by climbing to 100,000 or 500,000 watts and a 5,000 or 10,000 watter by moving to 20,000 or even 50,000 watts!!

You also will have less need for these weird-ass directional antenna arrays, where you're trying to protect this station or that station on adjacent or co-located channels.

Canada could cooperate by eliminating their "reserved" allocations, so that transmission restrictions on USA stations could be eliminated. Why hang on to these allocations if you're not going to use them anymore, you know?

Obviously this won't be doable in cities where the entire FM dial is taken up, but for moving an isolated low power (1,000 watts and below) small-town AM station or two onto a semi-empty FM dial it would be perfect.

Also, daytime stations should be returned to DAYTIME ONLY! What is this nonsense of night-service from former daytimers with only a watt or two....or even 5 or 10 watts? In congested areas you can't go out too far anyway and the electrical noise will kill you.

The clear channels should remain CLEAR.

AM radio was never meant for strictly local service. It has too much coverage range, especially at night. It's better suited for

long-distance broadcasting.

Ideally these long-range AM stations should also be networked in order to provide seamless coverage across the country. Let FM do local service.

I think that anyone that has even a semi-serious interest in shortwave should get a radio with SSB reception capability and the ability to tune in 1 khz or smaller increments (and fine tune from there) . The 7600GR is a very good portable. I have the older 7600g which is consider my best portable.

With SSB you can listen to utility stations and the amateur radio bands. Also, you can listen to AM stations in sideband mode and help fight off interference.

The question to ask yourself, in my opinion, is whether the 1102 or 1103 would do the job for you (half the cost). There are a lot of big fans of the 1103 (I can't get used to the unusual ergonomics of the radio). I like the 1102 a lot despite some of its unique characteristics.

I wouldn't second guess your purchase. You have true LSB and USB, synchro detect (which can help at times), continuous SW coverage. If I could only have one of the current under-$200 portables, the 7600g(r) would be the one.

I am sure the 1103 fans will be here soon to promote that one! [it ain't bad, but I prefer the 7600g(r)]

> Well, I think we have WAY too many MW stations in the USA.

We have them for a variety of reasons. First, local service became a
priority of the FCC following W.W. II, and causedx all manner of low power
and daytime stations to be licensed. Second, the 1930's AMs that were not
clears were great in the 30's but as cities spread with urban sprawl, many
stations no longer covered their market area.

Yep, there are way to many defective facilities.
>
> A serious deletion of about half the stations out there - and moving

The formats can move to FM if viable.HD-2 may be a big help there. Docket
80-90 effectively overpopulated the FM band, too.

While advertisers do not pay much attention to coverage, they do to
ratings. And at work listeing in most markets is over 35% of total
listening.

In today's world of man made noise, you are very correct. 1 kw or even 5 kw
in a bigger city is not enough to cover well.

In Buenos Aires, I worked with the only Am that fully covered the market, and had no noise downtown: 100 kw on 710. We had to directionalize it towards downtown to overcome noise, though. And the market has plenty of 50 kw stations, all of which have coverage holes.

This needs a diplomatic solution. Its a great idea-.

True. This was a move to seem to allow daytimers to stay on for the Friday football game at the High School. But there are now more FMs in rural markets than Ams, so there is no need.
>

But they have not been since the 70's. That horse left the barn.
>

In the US, the days of noisy, fady skywave reception are gone. AM listening at night is so low anyway, that nothing is going to help it.
>
> Ideally these long-range AM stations should also be networked in order

> service.

That works in many other countries. That is the reason RDS was invented, in fact, to seek and change to multiple channels of the same national net. The problem, though, is that so little radio is listened to at night that there is no revenue value in this.

That's insane. Do you have any idea how much the electricity would
cost?

100 KW is only 3 dB stronger than 50.

The Degen/Kaito radios and accessories have absolutely Z.E.R.O. resale value.

Learn to opperate and appreciate the Sony 7600GR's Sync Detector which is currently not available in ANY radio in its price class. The 7600GR with the AN-LP1 antenna is an unbeatable combination in a portable radio unless you step up to a Sony SW-07 $$$.

There is an interesting comparison between the E1 and R75 at Guy Atkins blog at www.sdr-1000.blogspot.com. It is by a MW DXer in Finland and include an audio clip of WBBR in NY on the E1. Very impressive. Apparently the Finn got one of the lower price reconditioned units. As they are availabe for about $400, I'l have to start shoping around

I'm still skeptical. (Gee, can't you tell?) I suppose
part of the reason for my skepticism is the great
metric debacle. Anyone who works in the sciences
can tell you that metric is the standard there, but
boy did metric lay an egg when we were supposed
to convert to that for general measures in the US.

That's exactly why the band needs to be purged, and the high-power AM stations (WOR, WRKO, KDKA, KNX, etc.) and regionals (WLIB, WEZE, KQKE, WMCA, etc.) need their power doubled.

> In the US, the days of noisy, fady skywave reception are gone. AM listening
> at night is so low anyway, that nothing is going to help it.

Well, that still doesn't explain the reasoning behind why network overnight shows like Coast to Coast AM, Jim Bohannon, etc. are so popular (besides the cheap syndication). Obviously there are people listening - those who work at night need something.

The stations that don't wish to broadcast overnight could just turn off their transmitters.

I know that's the current practice among AM stations in Cali, Colombia (or at least was in 200) - after midight, a third of the dial is empty. I assume it's because of diminished advertising revenue, so it doesn't justify leaving the transmitter up and burning electricity.

> That is the reason RDS was invented, in
> fact, to seek and change to multiple channels of the same national net. The

I don't think RBDS (or RDS) works on MW though. I think it's strictly an FM feature, just like FM-SCA is.

Cranking up the power would significantly overcome the night-time fading in significant areas though.

It increases the useful coverage area. If a station does not cover its
market fully, the extra power can make it useful. As I mentioned, in one
international market, we found only a directional 100 kw could fully cover
the market... and the AM is #1 in that market because it has such good
coverage. We also needed 200 kw for an FM to cover adequately, something not
possible in the USA... so markets like San Francisco have no FM that covers
the entire market.

Speaking of the French... I was over at the local sporting goods store (buying
more ammo) and I saw that they had some French carbines for sale.

The placard said: "Never Fired. Only Dropped Once"

Each one came with a large square of white cloth (not sure what that was for,
though I guess it could be cut up into cleaning patches).

The syndicator makes money by bulking up hundreds of stations, all of which
are judged by the local ratings. Together, it is salable.

KFI in LA in morning drive reaches 150,000 persons per average quarter hour.
In Mid-5 AM, it reaches 12,000. But add KFI and a few hundred other
stations, and you have several hundred thousand listeners... and yu can get
some revenue. And stations do not want to be off the air, so this is easy,
cheap programming, even if they make no money, they get a good lead on AM
drive.
>
> The stations that don't wish to broadcast overnight could just turn off
> their transmitters.

The reason we don't,a s every engineer knows, is so that we do not have a
nasty surprise when we want to go on at 6 AM and the transmitter does not
work. I did my first 24/7 station in '64 for this reason... a couple of
missed hours of AM drive pay the light bill, and it is insurance gladly paid
for.

Most of the major stations are 24/7, and nearly all the commercial FMs are.

Correct. I forgot we were talking about AM. AM is so dead in Europe, I guess they did not even develop the technology.
>
> Cranking up the power would significantly overcome the night-time
> fading in significant areas though.

But most listeners would not put up, today, with the occasional fades and static. And then there is the auroral effect in Summer and the evenings in Fall and Spring when a local 1-A is obliterated within a hundred miles of its transmitter by some Venezuelan station (I remember this on many occasions less than 60 miles from 1100 in Cleveland!).

Keep the Sony 7600GR
Forget the KA31 antenna.
Get the Sony antenna use it on the Sony radio.

You want SSB and the Sony is great for that.

There have been quality control problems of late with the DE1103s.
This was an issue when it first came out, then was cleared up. Now
another batch of them is giving people fits (see the Yahoo group de1103)

Before this new bad batch was released I would have said not to hesitate
getting a DE1103, it's the best performer for dollar spent in portables. (My opinion)
Incredibly sensitive off the built in whip, better sounding speaker than the Sony,
and acceptable SSB if you can get the fine tuning ritual down.

Wavetrapper doesn't like the volume control, keypad layout, ergonomics
of the 1103. Many feel the same way. I never had a problem getting used
to it, but with the newer ones having problems I wouldn't recommend an 1103 now

Traci will have a tough time in the real world. Maybe his true calling
in life is to be a sista to some brother in prison?

I'm tempted to excuse your Neville Chamberlain-like cowardice and effete attitude as the ravings of yet another overeducated denizen of the white "whine" and quiche crowd who never fully recovered from romancing with the reds while at some second-rate Canadian university.

However, what IS inexcusable is your total ignorance of events in the Middle East and your lame-brained attempts to pass off as fact leftist propaganda on events of which you have no real knowledge. Get a new act or a new education, put down the Guardian, and forget about the like-minded stooges at CBC radio. I doubt you are salvageable but there's always hope.

4349. Interesting article on fading distortion

Newsgroup: rec.radio.shortwave
Date: 2006-07-26 23:40:59 UTC
From: r2000swler@hotmail.com
Message-ID: <1153957259.725672.244730@i42g2000cwa.googlegroups.com>
Source record: 85486

<http://www.kongsfjord.no/dl/dl.htm>
Dallas Lankford has done some serious research on the cause and cure of/for
the distortion caussed by ionospheric "hops".
All of his PDFs are informative, but his "Elliptic Low Pass Audio Filters" series
are must reads. His conclussions in his "Elliptic Low Pass Audio Filters (Amplified) -
Simplified and improved", 29-MAY-2006, are downright fascinating. I have been
playing with his design and a couple of steep cut off 3600Hz filters. I don't
have the tools to duplicate his research. I knew from the "get go" that my
remote/weak signal source with which I use to test detector, and to a lesser
degree, antenna/feedline combination suffered from the major weakness that
there was no multipath effects. All of my experiments were local ground wave
and I couldn't, and still can't, "messure" the effects of such fading.

I would love to have a Drake R8B, but I was forced to deal with the receivers I do
have. I used R390, R392, R2000(modified), R2000(stock),(borrowed)AOR7030,
and a DX398 for some simple tests. I am just out of the ground wave for several
MW stations and around dawn and dusk I get serious and nasty fading. So for
the last few weeks I have been comparing stock, ie non-synchronous, detectors
with synchronous detectors, and the addition of a brick wall 3.5KHz low pass fitler.

As Mr. Lankford concludes a synch detector is only (and that might ought to be
"may") be slightly better then a AF LP good filter. It is rather frustrating to have
spent the last 18 months building an outboard synchronous detector to find that
a simple LP filter offered so much improvement. Don't get me wrong, a synch
detector is a usefull addition, but not the end all I had hoped.

I will disagree with his use of a simple bipolar 2W AF amp. The one thing I have
descerned is that after AF detection, any additional distortion rapidly degrades
intelligibility. I found MOSFETs, and vacuum tubes, amps allowed me to understand
signals better then 6dB down from a "good" bipolar AF amp.

"My" third R2000 was siezed by my wife. I had added a MOSFET amp, redesigned
the treble cut to a tone-tilt control and just completed adding switchable 3KHz/4KHz
Filters as designed by Mr. Lankford. My wife has been doing some casual SWL for the
last few days and agrees the filters are very good for nasty band conditions.

Email is abandoned and dead.
Terry

Keep listening. In North America there isn't much on Long Wave except a few aviation navigation beacons. And every year, there are fewer and fewer of them. You may hear a few differential GPS broadcasts. However, the best time to listen is in the winter months early in the morning before sunrise. Then you stand a pretty good chance of hearing the LW broadcasts from Europe.

Digital television (or radio) is not on my 'to buy' list. Nor will it be. There's nothing on either worth spending money for a new, more expensive receiver for.

And how, I wonder, can they ever expect people to buy those expensive DTV's when there are still $100 20" analog sets (and $150 27" sets) out there?

Bravo! Bravo! The radio and recording industries screw things up and blame the listener. It's nice to see that someone else finally places the blame squarely where it belongs.

If it weren't for the insane over processing, AM radio would be a lot more palatable to most people. What do they expect when they process out all the dynamic range (they do this on FM as well) and limit the frequency response to 5KHz?

I once had a 7600g (the one that came out just before the gr) and I kind
of wore it out (then eventually lost it). I don't want to sound
ungrateful but I *still* miss that radio. The features it had were just
too useful and though now I have a Kaito KA1103 (aka Degen DE1103) it's
filling the void some but there are just too many things that Sony could
do that the 1103 can't do such as having switchable sidebands or the
sync detect (even if one didn't like the audio of the sync detector,
you'd still get decent ECSS performance out of the sideband modes of the
7600/7600g/7600gr. For goodness sake keep that Sony, as even without
the amped antenna, you've got a fine little reciever there. And yeah I
could see the possibilty that my 1103 won't retain street value but
it'll do the trick until I figure out a way to get another Sony.

Doubling power would do little or nothing at all. To double the range you
would need 5x the power. Doubling the power would only bring the signal up
3dB, which, on the fringe, wouldn't even bring it out of the noise. Wouldn't
bring your local signal out of the noise, if it's there already.

>
> Cranking up the power would significantly overcome the night-time

Nope. Wouldn't really change anything. The physics of the ionosphere don't
change with power.

I am a long, long time SWL & Ham (since 1959). I have used literally
hundreds of shortwave receivers & hamband receivers over that time.Two
months ago I bought a Degen 1103 used for $35.

I say return the Sony & get the Degen (Kaito)1103.

It's a very good radiofor the $'s. Matches the Sony 7600 in
performance.
Receives SSB/CW (unlike the 1101) & is inexpensive.

I use mine daily to monitor the ham bands, listen to AM & FM broadcast
& shortwave broadcast.

You can have low price & good performance.

See reviews here: http://www.eham.net/reviews/detail/4288

I have heard the station I reference (710 AM, 100 kw, intentionally
directional) on the AUX at 50 kw, and places where it was perfectly
listenable become unlistenable. 3 db can make a huge difference in
overcoming man made noise. In fact, the power was intentionally cut to make
empirical observations at a bunch of different high noise sites. This was
done before it went directional, also, to verify that the additional power
towards the city was helping.

In most cases, we are not talking about adding fringe listening, but making
the signal listenable in its market.

In noisy environments, any improvements in strength are helpful and result
in increased ratings.

Good point.

I discovered recently that I have an unassembled Ramsey kit for a micro-power TV transmitter that can be tuned to channel 5 or 6. I vaguely remember buying it so that I can transmit anything I want to my vintage (and soon-to-be-vintage) TVs. I don't know if it is still in the Ramsey catalog.

I also have part 15 AM and FM transmitters so that I can hear what I want on any antique receiver I have. (Right now I am listening, as I do most afternoons, to All Things Considered--being transmitted by KQED-FM--on the same model 1937 Zenith my family owned when I was a toddler.

I have always heard that Muntz TVs were advertised (and sold in Muntz showrooms) only in major cities because one of their major economies was omitting I.F. stages. They were not fringe-area receivers!

Which ones are most likely to be heard? What would be a reasonable
antenna for longwave? I've never heard anything but beacons on LW, but
I do like the hunt for them.

FM coverage is not a matter of power. It is a matter of antenna. The
antenna needs a good location and needs to be well engineered. Many
high-power FMs use wide aperture antennas to get high ERP and that
creates a lot of nulls.

I think these are shifted John. For instance, 4268.7 is probably the well known Canadian Halifax station at 4271 KHz . I don't know the R71A well enough but maybe you have to shift it 2.3 KHz by the pick up the FAX? Different receivers do it differently. Thanks again for the list!

The only reason to replace a receiver is if you are
upgrading to a home theater setup (or upgrading
that, really) or if you got bit by the audiophile bug
and want a better quality amp.

Of course, there are the early adopters, those that
have to have the highest end stuff, and the people
who really do go out and buy new stuff every
couple of years or so, but most of America doesn't
fall into that category.

> And how, I wonder, can they ever expect people to buy those
expensive DTV's
> when there are still $100 20" analog sets (and $150 27" sets) out
there?

Yep. If they were serious about making people
convert, they should have mandated all televisions
have digital built in, even if they can receive
analog now.

You'd have to put the converter onto a Part 15 television
transmitter to get it to work, and something tells me that
those will be illegal when the band is reallocated for
whatever.

Hi there,

We haven't heard anything new about the 1104 in ages. The same goes
for the 1108, which is the one I am really interested in.

By the way, Ulis should have radiointel updated and back in action
within a week or so. He has had an unusually busy and difficult
summer.

I'm sure he will post any new info on these models as he learns of new
info.

It's time for you to do some research. I didn't invent the idea of Jews being the only ones given souls by G_d. It predates the Torah.

http://www.askmoses.com/article.html?h=192&o=220

==========
An orthodox Jew is thus being totally honest when he tells a Gentile that Jews and Gentiles have the same soul. It's the soul of the dog or the cat they share in common. But the Jew has the extra soul which distinguishes him from the dog, the cat or the Gentile.

http://www.geocities.com/mewatch99/soul.html
==========

The idea that all souls are the same is one of the biggest mistakes of modern spirituality. We are so used to thinking that definitions create barriers and barriers cause hatred that we are convinced that to be spiritual means to have no borders. From a Kabbalistic perspective, this totally misses the point of existence.

http://www.chabad.org/library/article.asp?AID=166900
==========

So we see that the Jews, because of their special spiritual level, are considered to be a genus different from all the other people.

http://www.daatemet.org.il/daathalacha/en_gentiles5.html

The Degen 1103 is a great cheap radio. I have also had the Sony 7600
(sold it when I bought the G), 7600G and now the 7600GR.
The Sony's are my goto radios for travel. They are rugged, lots of
features and sound great with good headphones. I will get the antenna
one of these days too. Also, I could get my money out of them anytime
I wanted.
The degen is a wonderful set for the money if you get a good one and I
have had lots of fun with it. But I don't take it with me. That jog
wheel tuning looks too delicate for me and the way I travel. I use the
radio around the house to check the ham bands and general conditions.
I switch to the Sony if I want to get serious. If you want to have fun
with this hobby go with the Sony.

==========
A detailed timeline of the bombing has been provided by UN sources and reported by CNN. According to the timeline, the first bomb exploded around 200 yards from the post at 1.20pm yesterday.Unifil observers then telephoned their designated contact with the Israeli military, who assured them the attacks would stop.

Over the next several hours, nine more bombs fell close to the post, each one followed by a call to the Israeli military, the UN officer said.The main Unifil base in the town of Naqoura lost contact with the post at 7.40pm, seemingly the time when the post received a direct hit.

A report was made by Milos Strugar, a United Nations Interim Force spokesman, shortly after the bomb hit: "One aerial bomb directly impacted the building and shelter in the base of the United Nations Observer Group in in the area of Khiam," he said. "There are casualties among the observers. A UNIFIL dispatched rescue team which is on the spot is still unable to clear the rubble," he said. He also reported that Israeli firing continued during the rescue operation

I remember someone using a VCR tape for audio recording from the radio.
He set the record time to six hours and when recording, would write down
the time in order to locate a desired segment at a later date.

How is the sound quality at such a slow tape speed? Speech may be
acceptable, but would music still be of good enough quality?

mike

> creates a lot of nulls.

FM is a matter of power and height. All major antenna manufacturers, like
ERI, build good antennas.

For example, 50 kw ERP at 1000 feet is the same theoretical coverage as
about 25 kw ERP at 2000 feet.

What is a wide aperture FM antenna? I have BUILT FM antennas and have never
heard this.
```

Antennas for FM consist of one or more bays. Circularly polarized, 2 bays is about unity gain. Spacing between elements affects gain, and also the vertical radiation, and mechanical beam tilt and null fill may be employed to compensate for overshoot or an irregular mounting structure.

Given this, the number of bays creates gain. Stations, if they can, would use one or two bays as multiple bays create a narrower beam and potential for overshoot. Large market stations will nearly always have two to four bay antennas.

The sound quality is more than adequate for shortwave. Many VCRs act funny if you try to record without video present, so you need to use the VCR in simulcast mode. It doesn't matter what video you use. THe VCR needs the video for timing.

I think recording on the PC is less work, plus you can use sound editors such as Audacity, SoundForge, etc.

It is an interesting idea, but nobody builds LCR filters. Rather, you use the LCR filter as a prototype, then build a leapfrog active filter from signal flow graphs based on the physical LCR filter.

The problem with elliptic filters with sharp cutoffs is they ring. I think that would be more annoying than the flutter it is trying to remove.

If you're using an earlier, linear track only machine, slow speed
audio can be pretty poor.

VHS Hi-Fi, though, can be surprisingly good even at the slowest speed.

I frequently used a VHS Hi-Fi machine for airchecks when producing
large scale field events that would sometimes run two or three days.

The audio was always so good I never had to be embarrassed about the
quality when I presented a recording to a client, or host sponsor.

Tell All Venezuelans, To Remove Chavez INSTANTLY, And Explain Why

26 July 2006
{HRI 20060729-V2.0}

(Version 2.0)

'

Hugo Chavez is a well-known sociopath, and you don't want him in charge
of ANY people, of course,

and also not in charge of any people's possessions, of
course.

'

You remove him BY FORCEFULLY POINTING OUT ENOUGH TRUTH ABOUT HIM.

Remember? You are (then) doing that, what any Diplomats
will hate, and will try to kill or remove you for, for your
naming, exposing and removing evil.

Nevertheless:

You remove him BY FORCEFULLY POINTING OUT and
holding there, ENOUGH TRUTH ABOUT HIM.

And that means not just privately, to your
spouse or so, of course, but PUBLICLY.

Chavez HATES truth, that is why he does nothing but
forcefully lying.

To break that force of lies, which weak people
do absorb, you will also have to point out the
lies of Chavez.

Nobody does that, so you will have to
do that.

'

The fact that Chavez completely hates and gets others to hate
George W. Bush, is ALREADY complete proof of

Hugo Chavez being a severely Criminal Mind.

Hugo Chavez HATES PEOPLE - all people, including the people of Venezuela, of course.

Castro HATES PEOPLE. Castro and Chavez HATE each other, and they HATE everyone, including themselves.

Chavez HATES Morales (Bolivia); Chavez HATES Lulu Da Silva (Brazil), Chavez HATES Kirchner (Argentina); Chavez HATES Belarus and its dictator; Chavez HATES the Russian people and its traitor, Putin. Chavez HATES Russian rifle-maker Mr. Kalaznikov, while "embracing him".

Chavez HATES people while embracing them.

Chavez HATES 'Che' Guevara, and 'Che' Guevara HATES all people too, including himself.

Che Guevara is a purely evil individual, I mean: evil ONLY.

'

'

Hugo Chavez - like earlier Criminal Minds, adequately described in your history books -

and remember, that Adolf Hitler, a person VERY SIMILAR TO HUGO CHAVEZ (equal certainly in Hate and in creating Hate and lies only) was also "loved" by Criminals and by those he hypnotized,

also Hugo Chavez uses his speeches and his television shows, solely with the purpose to hypnotize

(I mean that very literally - he uses that time to hypnotize)

all who are attending or viewing, ALSO hypnotizing his opponents and generally decent people,

he hypnotizes ALSO decent people into not seeing his extreme Hate for all people.

'

Hugo Chavez emanates - radiates - Evil and lies and Hatred ONLY, constantly and forcefully, as you know very well.

'

Therefore:

Tell all Venezuelans to remove Chavez INSTANTLY, to end the evil called Hugo Chavez NOW - if not stopped, he will go on and on and on and on, more and more and more and more evil.

You are to (you MUST) use any and all means of communication and of authority available to you, and demand of others to do so too,

as any physical communication is merely a token, a symbol that DOES represent your actual thought, your viewpoint and the force and care in your viewpoint, any communication basically is telepathic in nature.

You of course have to create and then hold the Energy and force of your thought -

something the Criminals are doing all the time, but THEY do it - Chavez does it - to destroy life and to drive people very crazy.

I already explained to you elsewhere, but I will do it again below, that Chavez and Castro are LYING ONLY:

THEY HATE PEOPLE, but they can not say that, of course, so they say "They Hate Americans."

THEY DO HATE THEIR OWN PEOPLE, and they HATE you too.

Exactly the same applies to the other dictators - most of whom are "friends" with each other, in order to further their evil.

You know all those heads of state by name, and

while Reuters starts to show some signs of sanity in reporting with some truth about such most vital matters,

the AMERICAN (!) Associated Press tells you still nothing but lies, from and about those 'heads of state.'

Which is why I have started to call these the Associated Parrots.

I still have to make something up for Amnesty International, which PRETENDS to "face and expose evil" - if it suits them, that is.

THEY DO HATE THEIR OWN PEOPLE, and they HATE you too.

If you do not create and hold the force of your own thoughts and viewpoint, then you have already lost to them, then they can do whatever they want, and have you look at it 'speechless,' and 'powerless,' unable to act BECAUSE YOU DID NOT HOLD THE FORCE AND ENERGY OF YOUR

OWN VIEWPOINT and look through Criminal Minds like Chavez
is one - a very active one, and an extremely dangerous
one if not removed.

'

'

Hugo Chavez emanates - radiates - Evil and lies and Hatred ONLY,
constantly and forcefully, as you know very well.

'

I will say this again for you - maybe I have to break though the mental
force of his hypnotizing Energies:

Hugo Chavez HATES PEOPLE, all people, including the people of
Venezuela, of course.

Castro HATES PEOPLE. Castro and Chavez HATE each other, and they
HATE everyone, including themselves.

Chavez HATES Morales (Bolivia), Chavez HATES Lulu Da Silva
(Brazil), Chavez HATES Kirchner (Argentina), Chavez HATES Belarus
and its dictator, Chavez HATES the Russian people and its
traitor, Putin. Chavez HATES Russian rifle-maker Mr. Kalaznikov,
while "embracing him".

Chavez HATES Che Guevara, and Che Guevara HATES all people too,
including himself. Che Guevara is a purely evil individual,
I mean: evil ONLY.

'

'

You, whatever your position is, are to DEMAND of EVERY Venezuelan, to
remove Chavez INSTANTLY,

and you are to presume very correctly, that not all Venezuelans
are cowards, nor locked up ...YET.

'

'

I give you a bit of another perspective on it, you having a
conscience:

Anyone who leaves Hugo Chavez in office, and does not ACTIVELY
remove him, can certainly not be called a Christian, not from any
viewpoint at all.

Nor a Mohammedan, for that matter, supposing Islam became
disinfected from the 'Arabian Virus' (from Criminal Minds
still un-named or even worshiped or supported by Arabians).

'

A Criminal Mind is not allowed even to run for office, in a Democracy,
let alone to be allowed to hypnotize,

to mentally make unaware so that he then can mentally bully them,

enough people, let alone when very few people actually turned up to
vote, to "elect" him, a Criminal Mind - Hugo Chavez - a sociopath,
hating of all of Mankind forever.

'

'

The First International Law

24 November 2002
{HRI 20021124-V2.0}
(issued 10 December 2002)

(Version 2.0
on 23 Sept 2003)

Criminal Minds are NOT allowed to govern a people,
a country or state, or federation of states;
that IS the First International Law. {I-01}

It is an INTERNATIONAL Law, because, quite
obviously, the population of the region,
country, state, or federation, failed to
prevent a Criminal Mind from acquiring
such a position of leadership. {I-01-A}

Individuals or groups that can not or do not
want to understand this Law, or who find this
Law unnecessary, are either themselves
Criminal Minds, or they are Destructive Cowards
who protect and hide Criminal Minds. {I-01-B}

Examining and determining whether a head of state,
- regardless of how he came to power -
IS a Criminal Mind, or,
- which amounts to the same condition -
whether he is a puppet to a Criminal Mind,
(that examination and determination) is done
by the World Council, or
- lacking such -
by the United Nations Assembly members. {I-02}

The Councillors
- or lacking these, the members of
the United Nations Assembly -
will act and must show that they act according
to a proper understanding of the matter, as

put forth in:

1. Definition Of Intelligence
2. Definition Of Insane
3. Defining Love And Hate
4. Standard Responses Of Criminal Minds
5. Intentional Omission Of Truth
6. The Bush Effect
7. Fine Particle Physics
8. The Trinity Of Science - Truth, Love And Beauty
9. Definition Of Schizophrenic
10. Religious Freedom
11. Course In Human Rights Philosophy
12. Two More Tools To Detect Criminal Minds
{I-02-A} (see Comment #3 for full titles)

In other words, they do not have the right
to be uneducated, or to make irrational
decisions, or to have unspoken motives; and
they must accordingly motivate their decision,
and they must do so publicly. {I-02-B}

They must not use religious or political
arguments or agendas, nor must they falsely
accuse others of that, to hide their intention
to undermine
- with an intention falsely to invoke, or
on the other hand, with an intention
falsely to prevent -
the natural use of the First International Law.
{I-02-C}

International peace-keeping forces can and must
be mandated and ordered by the World Councillors

- or lacking these, by the United Nations
Assembly members acting rationally and in
the interest of all people and not for the
economic or political or religious interest
of a group at the expense of others -

to carry out the decision, if lesser methods of
enforcement fail to bring about an immediate result.
{I-03}

Due to the nature of the Criminal Mind, there
is to be applied 'no tolerance,' and there are
no deadlines to be set nor observed, once a
decision has been made public; the decision is
valid and enforceable immediately, and by everyone.
{I-03-A}

It is further self-understood and natural to
decent and caring people, that the well-being of
people, the halting of harm inflicted upon them or
about to be inflicted upon the population concerned,
overrides any economic considerations, overrides
any political structures or group interests, or
their laws, protocols and rules, and overrides any
religious or historic customs. {I-03-B}

Koos Nolst Trenite "Cause Trinity"
human rights philosopher and poet

'Men of all nations came
to listen to Solomon's wisdom,
sent by all the kings of the world,
who had heard of his wisdom.'

1 Kings 4:34

Comment #1:
The understanding and detection of Criminal Minds now has been
adequately discovered and well described, and so this natural
law can be implemented, following a sufficient amount of people
to have been informed of its existence, as well as people
having been enabled to understand and to identify those who
want to prevent the knowledge, the understanding or the
carrying out of the First International Law.

Comment #2:
To have this knowledge, and thus naturally following it, will
save thousands of trillions of dollars, and will, for the whole
population of Earth, avoid endless and severe suffering, and
herald a new era of prosperity and freedom and health.

This is knowledge of such utmost importance, that no military
commander, no diplomat, and no politician could do without:
To identify actual enemies and actual friends correctly, and
to have an understanding of what they are doing and to predict
what they will do.

Comment #3:
The following list will bring about sufficient understanding of
the Criminal Mind.

The articles are placed in the order from easy to more difficult
understanding. They are written with non-English readers in mind.

For the rest, your curiosity and your desire to care for others
- as you yourself always wanted to, that is, without being
deceived or blinded, without being misguided or diverted or
stopped - your now undiverted and unstopped care for others may
and will guide you.

I hate to sound smart but you can easily buy a voice recorder for cheap or an mp3 recorder (hell if you have one they might have one there i know mine does) or a mini disc recorder if your so incline.VHS sound quality deteriorates quickly,after a few plays it would be starting to go funny.Also with the first two you dont need to buy any medium maybe a USB drive if you want it to be completely portable.

Yours truly
Adam

I agree with adam here.

I use a mini-disc recorder for this. Great application.

Move 'em to CanaDuh. They're the 'new' France.

Even Edweenie wishes he were born there.

Please read the pdf at:
<http://www.kongsfjord.no/dl/Audio/On%20The%20Causes%20And%20Cures%20Of%20Audio%20Distortion%20Of%20Received%20AM%20Signals%20Due%20To%20Fading%20II.pdf>
Lots of nifty formulae and even has FFT trasform screen captures to
show his reasoing.

Terry

You should first find out if they ship overseas at all. A friend of
mine in EU was told rather recently by U-R that they no longer ship
overseas, he was buying a radio.

4400. SW7600G Power Question

Newsgroup: rec.radio.shortwave
Date: 2006-07-27 12:11:46 UTC
From: robtgross <robtgross@att.net>
Message-ID: <642yg.482563$Fs1.91965@bgtnsc05-news.ops.worldnet.att.net>
Source record: 85386

Is it normal when using the radio with an AC adapter, that if you unplug the adapter from the wall outlet with the cable still attached to the radio that the radio still operates?

I thought that when connecting the power cable to the radio that the internal batteries are disconnected by the power jack.

Thanks

If there were a strong demand for digital radio, people would have bought
the digital radios regardless of whatever band digital was on.

If digital has to be nursed along as if it were a sickly puppy, it suggests
a weak demand.

It's concevable there's absolutely no demand at all.

The buzzwords for such a non-demand would be, accurately for once,
EXXXXXTREME TO THE MAXXXXX!

So, there is a demand for digital. The demand isn't coming from the
consumers, but from an even higher source -- the Federal Government.

And a bureaucrat's pen backed up by a judge's gavel is far more persuasive
than a whole dictionary full of buzzwords.

Back in the seventies, expert marketers were split between avocado green and woodgrain. There's no doubting that avocado green HD radios would have sold and sold and sold. Unless they didn't. Then the woodgrain experts would loudly proclaim that avocado green HD radios killed the market.

You can get use the video output from another VCR. One of my VCRs
showed the time and the date when the DISPLAY function was enabled.
The SET CLOCK screen might also work to provide an automatic time stamp.

> So, there is a demand for digital. The demand isn't coming from the
> consumers, but from an even higher source -- the Federal Government.

Demand is usually a windowed item. It frequently exists only for a
finite amount of time.
Like most innovations, the public doesn't really know whether or not
it wants digital radio, until it experiences it. Not unlike AM stereo.
There was a demand, there, too. it was just missed as a result of the
gamesmanship by AM stereo providers.

There is a demand, today, for nearly all things digital. Whether or
not broadcasters would move that way on their own, especially given the
enormous cost, AND the interference issues, is another matter. Absent an
FCC mandate, implementation, like AM stereo, if left to market forces
could, and likely would take longer than the demand window would allow.

So, what's driving the supply, is the Federal Government, and the
belief that digital radio is a solution to a problem that years of
federal policies have helped create.

The public demand is for digital solutions. Whether or not it's THIS
digital solution remains to be seen, and will be a function of correct
(read that: timely) marketing.

>
> And a bureaucrat's pen backed up by a judge's gavel is far more persuasive
> than a whole dictionary full of buzzwords.

No, actually, it's not. When the AM X-Band was created, allocations
were granted with the stipulation that the station implement AM stereo.

The demand window for AM stereo had been missed, so there was no
demand. Implementation of AM stereo in the X-band was slight, at the
most optimistic.

Now, it's virtually zero, with the IBOC mandate. AM Stereo and IBOC
are incompatible.

> was all I could hear.

Apparently a feed problem, and has been happening as of late:

** AUSTRALIA. R. Australia`s 9590 transmitter was running continuous
Waltzing Matilda instead of regular programming, July 22 when checked
at 1320, 1337 and 1419. Other frequencies, 9580 (until 14), 9560 and
6020 were normal. Both 9580 and 9590 are Shepparton, so what`s the
problem getting the same programming on both? Different feed circuits,
I suppose, and one of them broke down, but that`s no excuse.

I also checked 6080, and as usual all I could hear was ABC NT relay
not // 6020 or other RA frequencies, and no Singapore audible under.
At 1342 July 22 the DJ mentioned abc.net.au (Glenn Hauser, OK, DX
LISTENING DIGEST 6-107)

Am I reading the nifty formulae wrong? It looks to me like he's deriving
the distortion of a diode detector from the modulation index only. My sense
of these things says that a 50% modulated signal at a tenth of a volt is
going to have much more distortion than a 50% modulated signal at 10 volts.

It was about the secret aerosols rooms in US. One could find it by
searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As
a former NASA Langley scientist working in the area of nanotechnology
and nanoscale particles, I have been recently exposed to the
establishment of secret gas-aerosol rooms inside of United States, at
least in the Mid-Atlantic region (from Philadelphia to Virginia).
First, the highly irritant aerosols have surfaced at the NASA Langley
Research Center in several safety accidents. Investigations were
blocked, probably, because of lack of Congressional approval for such
financially-lucrative research at NASA. Later, these aerosols had been
encountered outside of NASA in Virginia, Delaware and Pennsylvania
.

This points out to yet another proliferation of originally-sensitive technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture, extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

Explain how invading Iraq caused Hezbolla to kidnapp and kill several
Israeli soldiers. This conflict pre-dates Iraq by several decades. Do some
reasearch.

The Middle East has been awash in weapons for years, Iraq had NOTHING do
with it. You can thank Syria and Iran for that.

Typical blame America First clueless dweeb.

If the VCR is of a stereo Hi-Fi vintage than the audio is recorded
digitally. It is fairly close to CD quality. Few people are aware of this
fact.
The recorded audio is much better than the heavilly compressed digital mp3.

4435. Iran's War - Aug. 22

Newsgroup: rec.radio.shortwave
Date: 2006-07-27 16:27:23 UTC
From: Mahmoud Ahmadinejad <dr-ahmadinejad@president.ir>
Message-ID: <eaapfo$9pg$1@nntp.aioe.org>
Source record: 85571

"What we are seeing is a series of conflicts that foreshadow a future world conflict, just as the Spanish Civil war prefigured the Second World War."

Just as Hitler used Franco as his proxy in Spain to test new military techniques and equipment on the battlefield, so Iran is using Hezbollah as its proxy to do the same.

Druze Leader: Iran testing Israeli military
http://intelligence-summit.blogspot.com/2006/07/druze-leader-iran-testing-israeli.html

This is a strategy Iran is testing out for a future war. Iran is testing Israel, probing Israel's reaction, and testing the response of the international community.

Let's recall how this all began.
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23557

"People need to realize this is not a bilateral conflict. It is part of the broad regional and international conflict between the West and Islamic fundamentalism championed by Iran."

Unchecked, Iran will continue its march toward nuclear power, and it will use terrorist proxies to conduct war against the West. In the future, those proxies will have nuclear weapons. [a page out of Communist China's play book.]

This is the "hurricane" Iranian president Mahmoud Ahmadinejad promised the world earlier this week in Tehran, in yet another "mein kampf" statement.

Now ask yourself, what is the significance of Iran's delay until August 22 to reply to the UN?

The Supreme National Security Council of Iran chose the August 22 date "for a very precise reason. August 21, 2006 (Rajab 27, 1427) is known in the Islamic calendar as the Night of the Sira'a and Miira'aj, the night Prophet Mohammed (saas) ascended to heaven from the Aqsa Mosque in Jerusalem on a Bourak (Half animal, half man), while a great light lit-up the night sky, and visited Heaven and Hell also Beit al-Saada and Beit al-Shaqaa (House of Happiness and House of Misery) and then descended back to Mecca.."

The Night Journey, or Miraj, is central to Islam's claim to Jerusalem as an Islamic holy city.

Ahmadinejad is planning an illumination of the night sky over Jerusalem to rival the one that greeted the Prophet of Islam on his journey. What the Iranian President, he says, is "promising the world by August 22 is the light in the sky over the Aqsa Mosque that took place the night before. That is his answer to the package of incentives the international community

offered Iran on June 6."

Certainly a nuclear attack on Jerusalem or even an all-out conventional assault against Israel by Iran would be consistent with Ahmadinejad's oft-repeated denials of Israel's right to exist and recent predictions that its demise was at hand. He hinted at the use of nuclear weapons in his phrasing when he said that Israel "pushed the button of its own destruction" by finally retaliating against Hizballah's relentless rocket barrage from south Lebanon.

http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=23533

Iran preping Aug 22 with Jerusalem propaganda:

According to the Iranian conservative newspaper, Kayhan, claimed Thursday in its top story that "Tel Aviv has been evacuated."

"Following the recent threats of Hassan Nasrallah, some of the Israeli government bodies were evacuated from Tel Aviv to Jerusalem."

The newspaper is associated with the spiritual leader Ayatollah Ali Khamenei.

http://www.ynetnews.com/articles/0,7340,L-3282238,00.html

Of course all Christians know the significance Jerusalem holds and the Final Days...

The iBiquity shill (or shall we say, Univision executive), has been very busy on the radio-info.com web site (he has 8000) posts. The radioinsight.com web site, looks like the sister site to, radio-info.com, but its HD moderators are pro-HD/IBOC, so it is a losing battle (they will make a final post, then lock the thread). Although, radio-info.com is moderated, its HD moderators do not get involved in posting. Well, I came across this old link, which I had been looking for, but David tried to down-play it, by saying it was just a blog (it is an actual article, written by Mark Ramsey, the president of Hear2.0, the audio entertainment strategy company, and Mercury Radio Research). The article gets right to the heart of the problem with HD/IBOC and blows away all of his rebuttals/arguments - he

didn't have much to say about it. I noticed his last comment about satellite radio, but this article has a little something to say about that:

http://www.hear2.com/2005/05/the_premature_d.html

And, David forgot to mention, that although Sirius and XM have 11,000,000 subscribers, they were expecting 40,000,000 by now, and both companies are very heavy in debt (but he wil try and explain that away, watch).

David Eduardo wrote:

> FM is a matter of power and height. All major antenna manufacturers, like
> ERI, build good antennas.

The height gives you range. The wattage gives you penetration -
ability to punch through concrete walls and what not.

A 10 watter signal on top of the Empire State Building will carry far.
But you'll probably only be able to hear it if you're either outside,
or sitting next to a window.

This is why I can get significantly beter reception in my windowless
bunker (high atop the 47th floor of One Chase Manhattan Plaza in the
Financial District) from a 6,000 like WSKQ or WQHT; than a
600-something watter like WKCR-FM or WCAA.

All four stations broadcast from the top of Empire.

But, strong demand, in the sense I'm using the term, isn't windowed. The
demand for TV in the late 40s certainly wasn't.

I'm not sure AM stereo would have ever taken off with the public. The platform motion effect is weird. Thunderstorm interference is still a problem. To work at it's best, AM stereo needs a wideband radio which opens it up to all sorts of other interference.

But I think the biggest factor was that people just don't want to pay much for radios and AM stereo radios cost a little more, and the multimode AM stereo radios cost a bit more yet. By the mid 80s, how much more did FM stereo cost than FM mono? Couple of bucks or something like that? Alot more AM stereo radios would have sold if AM stereo was just a buck or two more than standard AM.

Certainly the VCR industry withstood gamesmanship. The VHS machine didn't kill off the market, it enhanced it.

I'm not seeing any particular demand for digital solutions. Sure, people like DVDs better than videocassetes, but they like them because they're more convienient. Probably alot of people think their old VCR was also digital because it had digital readouts.

And if enough people cared about digital TV, the FCC wouldn't have to had to force the transition.

I don't see the contradiction. The FCC had a stipulation it didn't enforce.

[snip]

It'll be interesting to see what happens with the consumer radio market. I think the most important factor for selling HD radios for most people isn't the "crystal clear audio" but the extra channels on the FM band, assuming some interesting programming ends up there.

I've used a VCR for recording AM radio in the past. It sounds quite well. In fact, I remember WFAN using videotapes for airchecking their programs - in addition to the standard reel-to-reel decks - back in the early 1990s. The video section of the VCR was just taken from the surveilance cameras.

> Many VCRs act
> funny if you try to record without video present, so you need to use

> VCR needs the video for timing.

Yup. I never hooked up the video on the machine when I recorded that one time. I got a rolling black screen - but the audio played OK. I'm sure that it could have been improved with a video signal.

They must be changing something around because there's been some
strange stuff. They've been running the BBC occasionally on 15515 at,
as I remember, 22:00. And one Saturday, at 23:00 on 17795, they had the
BBC ID before the hour in the few minutes after the transmission began,
and then switched to R. Aus. after the time ticks.

It would be nice if they got a hour or two of the Beeb in the
Pacific. R. Aus seems to have enough signals out there at that
hour anyway.

The good stereo receivers had variable bandwidth that depended on
signal strength. Sony made a bunch of models that opened up with strong
stereo signals. Sony wasn't alone in this.

That's actually not a problem.

> But I think the biggest factor was that people just don't want to pay much

> more than standard AM.

And eventually, it would have been. But important to the discussion
is that AM stereo was proposed as far back as the 50's, with practical
demonstrations in the 60's. What kept it from taking off, was that at
the time it was announced, and interest developed, FCC made a mess of
the matter by a confusing array of stereo systems, most of which were
not mutually compatible, and multimode receivers required users to
select between the systems available on the receiver pursuant to the
system being broadcast. It was actually not as complex a thing as it
sounds, but there was a LOT of press about this, and most of it gross
misinformation. Which put off public embrace of the concept. By the time
the C-Quam system had been selected as the standard, and Kahn's suits
had been dropped, the window had closed. The public was no longer
excited about the concept, and was actively put off by the dizzying
array of misinformation.

Unlike Television in the 40's and 50's, which also required new
hardware, and some effort in antenna installation and deployment, there
wasn't a souring of the demand, by such widely misinformed press,
disseminating misinformation. The Television window didn't close.

AM Stereo did. As with a lot of new ideas whose times have been missed.

>
> Certainly the VCR industry withstood gamesmanship. The VHS machine didn't
> kill off the market, it enhanced it.

Actually, the VHS machine simply exploited it.

Enhancements came from camcorders, 8 and Hi-8, which led to 8 with
digital audio, which led to Digital video, which has led now to DVR's,
TiVO, and the array of Miglia products (and their kind) that replace all
outboard Video hardware with PC and Mac based DV.

>
>
> If digital radio fails, how would we even know there was a demand window?

We wouldn't. But then the difference between a product without
demand, and a product introduced after the demand window was closed is a
difference of academics.

When Lotus announced the M100 Elan in 1990, orders were placed
immediately. I placed one myself. It was going to be the biggest sports
car introduction in years. Huge. The numbers of orders placed were
dramatic. And then production delays. Delivery delays. And even the
patient customer began to ask for their money back. Finally the Elan hit
the US. About 45 days after Mazda began selling the Miata, for about
$25K less.

I waited and took delivery of mine. But the end of production was
announced the day I put the key in the ignition. Truth is, that the M100
was the finest car Lotus had ever fielded. And it would have sold in the
thousands. But they missed their window, and with the cancellations of
so many orders, they lost money. Production ceased. And the Miata bloomed.

Timing really is everything.

"Digital" is the hottest sell word on the planet. And yes, there were
several 'digital VCR's.' Only underscoring that there is demand for
digital solutions.

Or at least the digital buzzword.

DVD's are not only convenient, they're digital. CD's are not only
convenient, they're also digital. And that has driven an very near
frenzy of digital affiliations. Digital coffeemakers. Digital electric
blankets. Digital speakers. Digital headphones.

I've even seen a pair of digital earplugs.

"Digital" is a sell word. And it's working.

Whether or not a device is really a digital device....not relevant.
It's what it's perceived to be with a digital name...and that's higher
quality more accurate. Perception is the game in Marketing.

> And if enough people cared about digital TV, the FCC wouldn't have to had to

Because the market couldn't be moved by enorcement. Digital was
already on the horizon. Enforcing AM stereo with digital coming, and non
digital solutions not on the public's radar, would have been foolhardy.
The bureaucrat's pen and the judge's gavel are no match for a market
which is not interested.

That's factually inaccurate. The companies are acquiring subs faster
than the 2 remaining DBS entities did during their boost phase.

You can't say ''fuck'' on HD radio.

To take full advantage of the R75, you'd need to
disable the MW attenuator. The Kiwa mods would
help as well. I'm not an R75 owner nor an E1
owner, but I imagine that others may have
both.

VCR Hi-Fi records/reads audio two ways:

The old analog way with the linear audio track on the long side of the tape.
This mode is FM and is backward compatable with non-HiFi recorded tapes.

The HiFi audio mode is Pulse Code Modulation. PCM is used to record audio
with the video head but separate from the video. The video head takes a
swipe across the tape. When it reaches near the bottom, it stops recording
video and starts recording DIGITAL audio using the same head.

During playback, the head listens for video sending it to the screen and
when it reaches the end of a swipe, shifts its attention to audio sending
the digits to a circuit that converts the signal back into stereo sound.

If the DIGITAL audio is not present on the tape the HiFi VCR will use the
old analog FM linear audio track instead.

In the 1980s and 1990s, some people used the Hi-Fi tracks on VHS and BetaMax
VCRs to record audio. This was a stopgap measure while affordable digital
audio was being developed and sounded far better than audio cassettes.

Both companies are not heavily in debt. Neither has a debt to equity ration
any greater than General Electric. They have financed most of the start up
costs by equity issues, and have relatively manageable debt.

However, the investment community has knocked 75% of the XM stock price off
in the last 18 months, and Sirius is doing poorly. This is because the early
adopters, they feel, are already in on satellite and the value seekers do
not perceive there to be value at $12.95 a month.

But most of us, given height or power, would take height. KSCA in LA could be 78 kw on Flint Peak (where it was) but is 4800 watts on Mt Wilson. The trade for height is favorable, even at that low power.

On the other hand, at some point, it is counter-productive. We brought KRCV down from 570 watts at near 1000 feet HAAT to 6000 watts at 100 meters,a nd the signal usability improved drastically, even if we lost some theoretical coverage.

Yep I did this on a home-made antenna on Mt. Pichincha in Ecuador in the 60's. We were about 1000 meters right above the city, and I mounted the bays (vertical only) on a pole which had a pivot at the bottom and a chain at the top. We cranked out the chain until the antenna was angled about 20 degrees or so towards Quito, and got terrific results. We also found that by reducing power form 10 kw to about 1000 watts, we vastly reduced multipath, serious in the Andes, and got much better reception.

Those extra channels will eventually be pay channels, or dropped entirely.
Think about it:

They say the markets can only barely support the stations that are there at
present, and that IBOC is supposed to enhance the market and bring in more
listeners to make the market more profitable... HOWEVER, are the stations
going to be programming these new channels for free? I think not..
programming costs money. It costs for equipment, personnel, royalties, ad
inf. They will have to either try to sell commercial time on those channels
to help pay for their implementation (mind you, try to sell more ad time in
an already oversaturated market) or start charging for the service.

Don't see how anyone looking at the situation with an honest eye can see any
way around it.

Neither. They are new "radio stations" that can be sold to advertisers, and
a way of giving additional services to listeners. Free services.

In the major markets where the HD 2 channels are rolling out, there is
plenty of revenue for the full facility FMs. Revenue tends to grow with new
alternatives, and can come from reallocation of print and outdoor and direct
mail local dollars.
>
> Don't see how anyone looking at the situation with an honest eye can see
> any way around it.

We now have 8 HD2 channels on, with about 20 more to come. We have no plans
to do pay, and will sustain them with few commercials till they develop. In
the end, it is like getting 30 free radio stations with no cost of
capital... just start them up and build them.

Sexual Immorality
12"Everything is permissible for me"-but not everything is
beneficial. "Everything is permissible for me"-but I will not be
mastered by anything. 13"Food for the stomach and the stomach for
food"-but God will destroy them both. The body is not meant for
sexual immorality, but for the Lord, and the Lord for the body. 14By
his power God raised the Lord from the dead, and he will raise us also.
15Do you not know that your bodies are members of Christ himself? Shall
I then take the members of Christ and unite them with a prostitute?
Never! 16Do you not know that he who unites himself with a prostitute
is one with her in body? For it is said, "The two will become one
flesh."[b] 17But he who unites himself with the Lord is one with him in
spirit.

18Flee from sexual immorality. All other sins a man commits are
outside his body, but he who sins sexually sins against his own body.
19Do you not know that your body is a temple of the Holy Spirit, who is
in you, whom you have received from God? You are not your own; 20you
were bought at a price. Therefore honor God with your body.

http://www.godhatesfags.com

SODOMY IS AN ABOMINABLE SIN, WORTHY OF DEATH.
"If a man also lie with mankind, as he lieth with a woman, both of them have committed an abomination: they shall surely be put to death; their blood shall be upon them." Leviticus 20:13. "Who knowing the judgment of God, that they which commit such things are worthy of death, not only do the same, but have pleasure in them that do them." Romans 1:32.

See also Leviticus 18:22, Genesis 19, Romans 1:18-32, I Corinthians 6:9-11, I Timothy 1:10, and Jude 7.
GOD HATES ALL WORKERS OF INIQUITY.
"The foolish shall not stand in thy sight, thou hatest all workers of iniquity." Psalm 5:5.
See also Leviticus 20:23, Leviticus 26:30, Deuteronomy 32:19, Psalm 5:6, Psalm 11:5, Malachi 1:3, Matthew 7:23, and Romans 9:13.
JESUS CHRIST DIED ONLY FOR THOSE WHO BELIEVE.
"For God so loved the world that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life." John 3:16.
See also John 13:1, John 17:9, Ephesians 5:25, etc.
ONLY GOD'S ELECT HAVE THE CAPABILITY TO BELIEVE.
"Therefore they could not believe, because that Esaias said again, He hath blinded their eyes, and hardened their heart; that they should not see with their eyes, nor understand with their heart, and be converted, and I should heal them." John 12:39,40.
See also John 10:11,26, Matthew 11:25,26, Acts 13:48, Romans 9:19-24, etc.
SODOMITES ARE PROUD OF THEIR SIN ("GAY PRIDE"), AND IN THAT PRIDEFUL STATE THEY CANNOT REPENT - YOU CANNOT REPENT OF SOMETHING YOU'RE PROUD OF.
"Were they ashamed when they had committed abomination? nay, they were not at all ashamed, neither could they blush: therefore they shall fall among them that fall: at the time that I visit them they shall be cast down, saith the LORD." Jeremiah 6:15.

See also Jeremiah 13:23, Romans 1:24-32, Ezekiel 16:49-50, etc.
THE SODOMITES' ONLY HOPE IS TO HAVE THE UNAMBIGUOUS TRUTH PREACHED TO THEM, AND PERHAPS GOD WILL SOFTEN THEIR HEARTS AND GRANT THEM REPENTANCE TO DEPART FROM THEIR SIN AND NAME THE NAME OF CHRIST. NOT VERY LIKELY, THOUGH, SINCE GOD HAS GIVEN THEM UP.
"Nevertheless the foundation of God standeth sure, having this seal, The Lord knoweth them that are his. And, Let every one that nameth the name of Christ depart from iniquity." II Timothy 2:19. "Wherefore God also gave them up to uncleanness...unto vile affections...to a reprobate mind." Romans 1:24-28.
See also II Timothy 2:24-26, Psalm 5:5, I Corinthians 6:9-11, Acts 17:30, Jude 22,23, etc.
THERE IS A HELL WHERE ALL IMPENITENT SINNERS WILL RESIDE FOR ALL ETERNITY. THAT INCLUDES SODOMITES (CALLED "DOGS").
"And they shall go forth, and look upon the carcasses of the men that have transgressed against me: for their worm shall not die, neither shall their fire be quenched; and they shall be an abhorring unto all flesh." Isaiah 66:24. "For without are dogs..." Revelation 22:15.
See also Mark 9:44, Luke 16:23, Revelation 20:15.
In summary, sodomites are wicked and sinners before the Lord exceedingly (Gen. 13:13), are violent and doom nations (Gen. 19:1-25; Jgs. 19), are abominable to God (Lev. 18:22), are worthy of death for their vile, depraved, unnatural sex practices (Lev. 20:13; Rom. 1:32), are called dogs because they are filthy, impudent and libidinous (Deut. 23:17,18; Mat. 7:6; Phil. 3:2), produce by their very presence in society a kind of mass intoxication from their wine made from grapes of gall from the vine of Sodom and the fields of Gomorrah which poisons society's mores with the poison of dragons and the cruel venom of asps (Deut. 32:32,33), declare their sin and shame on their countenance (Isa. 3:9), are shameless and unable to blush (Jer. 6:15), are workers of iniquity and hated by God (Psa. 5:5), are liars and murderers (Jn. 8:44), are filthy and lawless (2 Pet. 2:7,8), are natural brute beasts (2 Pet. 2:12), are dogs eating their own vomit and sows wallowing in their own feces (2 Pet. 2:22), will proliferate at the end of the world bringing final judgment on mankind (Lk. 17:28-30), have been finally given up by God to uncleanness dishonoring their own bodies among themselves, to vile affections, and to a reprobate mind such that they cannot think straight about anything (Rom. 1:23-28), have wholly given themselves over to fornication and gone after strange flesh (Jude 7), must be pulled as faggots from the fire (Jude 23), and have no hope of Heaven unless they repent (Rev. 22:15), which they can't do in their prideful state (Jer. 6:15). They need to hear this truth if they are to have any hope of penitence, faith in Jesus Christ and salvation (I Timothy 4:2-4).

> Frank Dresser

Very few radios drive the detector with anything near 10V.
The R390 and R392 have the highest diode drive voltages I have
seen and I think they are less then about 3V.

Most modern, IE "solid state", receivers I have measured have less
1V. All that I have seen that use discrete diode detectors as oppossed
to ICs, have farily high AF gain stages.

I didn't post this as an attemp to claim that "Synchronous detectors"
are a hoax,
but to offer another viewpoint that is backed up by what appears to be
valid
engineering to me.

ASCII text is not my choice for this arcane topic because of the great
difficulty
in expressing meaningfull equations.

This is merely another tool to be used in trying to receceive fading
signals.
His filters work much better then I expected. I found that by forward
biasing
the detector in my R2000 I got a much cleaner, ie lower distortion,
signal.
This was difficult to manage over very modest temperature changes.
A full wave "improved AM detector" gave even better results.
<http://www.amwindow.org/tech/htm/alowdisdet.htm>
A synch detector in an outboard detector gave even better results.

But the simple improved AM detector with a 4000Hz LP filter is a pretty
close
match to the synch detector at 1/100 the effort.

The above link goes into the math, this link starts with simpler math
and may
help the none engineers enter the fray.
<http://www.st-andrews.ac.uk/~www_pa/Scots_Guide/RadCom/part9/page2.html>

Another unusual but good detector can be seen at:
<http://www.pan-tex.net/usr/r/receivers/elrpicamdetect.htm>
Tom Holden's Synch detector group has a link to a very detailed math
examination of "detection". I lost the link to that paper so you will
have to ask
Tom or join his group.

And please note Mr. Lankford is not merely slapping a 4000Hz LP AF
filter
in the audio chain, he is offset tunning, with good narrow IF fitlers,
to eliminate
one sideband.

Terry

David,

You are spewing the bullshit again, here is his background and
companies:

Hear2.0 is the very first audio entertainment strategy company. It is
the sister company to Mercury Radio Research, a leading provider of
strategic research services to the radio industry.

MARK RAMSEY, PRESIDENT

As head of one of the radio industry's leading research companies,
Mercury Radio Research. Mark Ramsey has been a key strategic advisor to
many broadcasters nationwide, including CBS Radio, Entravision
Communications, Saga Communications, Susquehanna Radio, Corus
Entertainment, and many others. Ramsey has published articles in all
the major radio trade publications and is a recognized radio futurist.

Ramsey is the author of the well-known and widely-quoted Radio
Marketing Nexus - now the home of hear2.0.

Ramsey's most recent book aimed at broadcasters, Fresh Air: Marketing
Gurus on Radio, has been recently released, and is available through
Amazon.com and Barnes and Noble.

4498. Re: Interesting article on fading distortion

Terry, Frank, et al.

Yes, an interesting article. Thanks for bringing it up to the front
burner again.

I don't understand his representation of the fading term as it has no
link to the actual fading frequency. I would think the distortion
would have to be created by the fade. The only frequencies discussed
are w_carrier, and w_audio.

Also his depiction of instantaneous fourier spectrum at the point of
deepest fade leaves me guessing. I would have liked to see him strobe
the fade in and out at a fixed frequency and see the spectrum output of
that. All in all a good article. I read it a few weeks ago briefly,
but haven't had the time to get into it. I'll for sure make the time
knowing there might be some meaningfull discussion here. Usually the
threads degenerate at warp speed.

My boss just bought a smokin nice spectrum analyzer that I might be
able to share with him.

And David, what was that comment about the Drake receivers? Do you
know what type of filters they use?

regards,
Bob

You are reading right from Mr Ramsey's website.

Hear 2.0 is a brand new company, and there is not much that indicates it has
any customers. It is part of a blog, for gawd's sake, not an enterprise.

Mark'sw radio research company does perceptual and music testing, just like
a couple of dozen other companies do. It is not the largest, like Coleman,
Critical Mass Media, Broadcast Architecture, Paragon, etc. It is not the
smallest, but is at the small side. It is hardly a trendsetter.

Heck, I have done projects for Susquehanna, Infinity, and a bunch of similar
companies in the US... and for some that are even bigger outside the US. I
could write about the same thing as what follows:
>
> MARK RAMSEY, PRESIDENT
>
> As head of one of the radio industry's leading research companies,
> Mercury Radio Research. Mark Ramsey has been a key strategic advisor to
> many broadcasters nationwide, including CBS Radio, Entravision
> Communications, Saga Communications, Susquehanna Radio, Corus

> Entertainment, and many others. Ramsey has published articles in all
> the major radio trade publications and is a recognized radio futurist.

Mark is a good researcher. I admire a lot of what he has done. However, he is off base on the HD thing and, as I have cited, is actually wrong on some key facts... probably because he has not spent enough time reviewing the history of broadcasting. He is a smart guy, and I doubt he would like you using out of context his opinions.

Lease them out to third party operators for multi-ethnic programming.

Imagine this. You have Reggaeton music on your normal HD-1 stream.

Lease out your HD-2 to say....a Spanish Christian broadcaster who can't
afford to buy a station of their own, or some other ethnic group(s)
that doesn't have the critical mass to support a full-time station.
Ditto the HD-3.

Assuming the analog FM goes away, how many streams can you split each
frequency on the 88-108 band into?

I used to do this all the time. I would record the video of the local
preview channel along with the audio. The preview channel had the time
displayed constantly.

4519. Sony shortwave repair, and reception question--

Newsgroup: rec.radio.shortwave
Date: 2006-07-28 03:10:02 UTC
From: Jean Barto <jsbarto1@cox.net>
Message-ID: <C0EEF84A.1FD41%jsbarto1@cox.net>
Source record: 85605

Hi folks--

I have two Sony shortwave receivers that need repair--one is the ICF SW-007, the battery bay on that one has a bad spring mechanism, and keeps popping open--I have to tape it shut with duct tape. Less importantly, the top section of the antenna broke off, and I'd also like to have the antenna replaced/repaired if possible.

My other receiver (forget the nomenclature, but it's the "weird looking" small portable that came out four or five years ago) has a broken volume dial. I dropped the radio on its side a few months ago, and the volume dial became jammed so it couldn't be advanced easily. I fiddled around with it some, and proceeded to break it entirely--the volume dial came out of the slot entirely, and into my hands. Now, the radio is continually on the *highest* volume level, and now there's no way to turn it down, since the volume dial is no longer in its slot.

So, I'd like to have both radios repaired if I can--they both fit my needs (small and portable and easy to pack/travel with), neither of them are "throwaway" radios by any means, and to me, worth fixing. However, I couldn't find anywhere on the Sony website where they listed radio repair facilities. I also checked Universal Radio's website, and I think they said they no longer accept Sony radios for repair.

Hopefully, someone here can help with this, and suggest someplace where I can send my radios for repair.

Lastly, I've noticed the reception on all of my favorite stations (WWCR, Radio Havana, etc.) is *lousy*, and has been so for the past couple of weeks. Is it the time of year, or something else? Just wondering.

Thanks in advance,

Jean in SE VA

Bottom line both companies are losing money per share and need to
roughly double their current subscriber base to break even with their
operating costs.

Nope. XM actually has operating cas flow, or EBITDA. And they should have free cash flow by Q4 of 2006 or Q1 of next year... Sirius is about a year behind them.

Both are on plan so far.

Well, no...

I first heard of the change on a local CBC AM station this afternoon.
They had a good laugh at the irony of it. Pandering to the lowest common
denominator seems to be an accepted way of fattening the bottom line.

"Nobody ever went broke underestimating the taste of the American public."

It is not a format. It is a stunt to change the perception of that dial
position from one of an evangelical station to a pop station of some kind...
coming next week.

I wonder whether when you see an inflatable elephant on top of a car dealer
you think that they sell elephants there!

It's a stunt.

Where do you get your numbers. Yahoo says EPS (ttm): -3.06 for XMSR?

They are also off plan. They do not have the number of subscribers they
supposed to have at this time and so have revised their schedual.

4535. Geomagnetic Minor Storm to continue (28 July 2006)

Newsgroup: rec.radio.shortwave
Date: 2006-07-28 09:23:08 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44C9D77C.E0A0552C@milestones.com>
Source record: 85621

Minor geomagnetic storm continues. Increased geomagnetic activity is expected to continue for next 24 to 48 hours. Source is high speed solar wind with Bz orientation southward, due to coronal hole, coupled with weak shock of July 28, 2006. Current Kp index: 6. Current solar wind: 634 km/s at 2.7 protons/cm3. On 2006 Jul 28 0748Z: Bz: -2.7 nT. Aurora Activity Level was 8 at 0618 UTC.

Summary for last 24 hours: Space weather for the past 24 hours has been moderate. Geomagnetic storms reaching the G2 level occurred. Forecast for next 24 hours: Space weather for the next 24 hours is expected to be minor. Geomagnetic storms reaching the G1 level are expected.

Yes siree bob 'rhf' finds another new and wonderful radio :
"Like New s530 High Performance Field Radio"

Oops - This is another eBay 'typo' - It's just another
display model radio from RadioShack and is really
only a Eton {Grundig} S350 Radio.

my bad ~ RHF

> N9NEO

One big problem with recreating real world HF propagation is the random
nature of multipath. Lankford's sweeping RF notch recreates a simple
single fade, but can't
produce the multiple "comb filter" like effect I have noticed. I built
a simple HiFer
"beacon" that allows me to check a "real world" RF signal for just how
much
SN effected intelligibility. I found that many non obvious things had a
big effect.
One of the simplest source of nastiness is the post detection AF chain.
I had
doubted that minor things like the type of capacitor could "really make
any diference".
My whole goal was to improve my best radio as much as I could for as

little money
as possible. A synch detector is one improvement. But even though a
"good" synch
detector with a phasing fitler is supposed to reject non signal out of
band signals.
see :<http://home.worldnet.att.net/~wa1sov/technical/sync_det.html>
It does help, in some conditions.
I found the biggest jump in intelligibility for the least money came
from an "Improved
AM detector". See: <http://www.amwindow.org/tech/htm/alowdisdet.htm>
To qoute "There are no intermodulation terms to contend with. In fact,
functionaly,
this is identical to synchronous detection. The negative half wave
signal is derived
in a similar fashion."
For clear signals, with no or minimal fading this detector is cleaner
then any other
detector I have played with. With this detector, a decent 4KHz IF
filter, and using
offset tuning on AM with a 4KHZ AF LP fitler, the result is very close
in performance
a Synch detector. If you wish to follow my "saga", please look up the
various threads from last summer.

IF I were doing this project over I would likely go with the better
Kiwa fitler module and the improved AM detector. Along with an improved
AF chain. My wife's R2000 has a
4HKZ mechanical fiter in the AM-N/SSB slot, the improved AM detector
and a home
built 2W MOSFET audio chain. And she loves it.

Terry

That is Crap ''radio''.If a radio station in this area was running that Crap,I wouldn't listen to it.I sort of miss (although I didn't listen much to them,other members of my family tuned them in) those old soap opera programs that used to be on the radio back in the 1940's and 1950's.

I just received the Kaito 1103 and Sony 7600GR. I actually like the
Kaito better. The ergonomics become intuitive once you have spent a

little time with the radio, and the much more expensive Sony does not perform any better in my admittedly unscientific tests. If I were doing it over again I would get the 1103 with the active loop antenna. It works great for SSB as well--good enough to receive WEFAX, etc. Just my $.02. --Steve

No, it's wideband FM on the same track as the video using some tricks:
head gap angled opposite the video, wider gap, and low frequency carriers
so that the sound signal is "under" the video signal in the oxide.
Seperate carriers per side, too, I think.

Exactly. I'm wondering if this format change indicates a trend. Are the religion based stations losing people to the extent they are no longer able to attract advertisers or contributors?

It's a sad state of affairs that the new owners think a tasteless approach will increase income. David Eduardo is probably right when he says there will be another change once the initial 'excitement' is over.

It's all publicity.

We had a station sterilize a frequency here in Chicago. Went from
CHR, to "Hell Radio..." which drew a LOT of fire (so to speak) and then
to Young Talk, which failed dismally.

When WNIB went from it's classical format, to WDRV's Classic Rock,
they stunted with a week of 24 hour single artist segues before they
settled down.

I did a format change from Rock to Country where we took the station
dark and did crickets and bird sound effects, with only a legal ID each
hour, for a weekend.

Things will settle down into a more mainstream format.

But to answer your question....there has been a strong movement in
recent years by, for, and against religious stations in the US.

For awhile there, and some still today, religious broadcasters
snapped up the non comm frequencies for satellite distributed
evangelicals. Many public stations found themselves crowded out of
coverage by drop-in religious broadcasters. There was, and has been
huge, debate over this due to the pseudo commercial nature of much
religious programming and the threatened loss of some Public Radio
coverage.

Aggressive steps have been taken by Public Broadcasters to protect
their franchises, by consolidating locals allocations in the region to
retain their coverage and prevent religious drop-ins from eating up
their weaker signal areas, mostly fringe. WBEZ acquired two additional

frequencies, and is working on a third, in the wake of this.

Still, religious FM's are having a tough time meeting the revenue goals possible with more mainstream fare, and are the target of acquisitions all over the dial. Like the Florians at WNIB, it's tough to turn down nearly half a billion dollars, no matter how well you're doing, or how much you believe in your product.

No. I think the car dealer got drunk and passed out on the lot. His
salesman PUT that elephant on the car dealer's chest when he was passed out.

Salesmen get their fun where they can find it. I don't imagine it to be
an easy life. We'll have to ask dxAce....

The space weather/propagation connection is still a mystery to me.
Sometimes propagation conditions follow the weather and sometimes it
does not. Yesterday when we were in the geomagnetic storm NZ and
Australia were putting big signals in here and I suspect that any over
the pole signals might have been degraded.

I expected Australia and NZ to sound poor but they were very good and
sounded like a local broadcaster a few miles down the road with over S9
levels.

Both companies are off plan on subscriber numbers and are revising their estimates. Both companies need to roughly double their numbers to break even. The current EPS is negative for both companies or in other words they are both still losing money. Their is no argument about this just go look it up. It looks like another 1 to 2 years for either company to break even as long as the economy hangs in there according to most analysts.

Wrong - both companies are heavily in debt...

It sounds like keeping promises is everything. It's harder for a company to
sell big ticket items when they look like screw-ups.

Speaking of AM stereo, windows and car analogies, imagine it's 1955 and
Chevrolet tried to sell their new V8 car at a higher price than the well
established Cadillac V8. They couldn't. The Chevy V8 would have failed,
not because it was introduced years after the Caddy, but because they were
trying to get people to pay more than what they already knew a good V8 car
should cost.

If the stereo on AM was practically a give-away, as it was on FM, it would
have suceeded even into the 90s.

"Digital" will soon be a punch line. And the last guys to know will be the marketers -- the same guys who tried to sell us "space age" floor tiles and "turbo" diesel exhaust cologne.

Again, it was the bureaucrat's decision not to demand it. The decision not to demand makes sense, but making sense is not a requriement for bureaucratic decisions.

Content and price.

Well, I do think that pay radio is an option if IBOC fails. There's no
guarantees with IBOC and I think ibiquity would be foolish not to have a
back-up plan.

I dunno. Maybe the revenues can expand. The population is expanding.

Maybe an IBOC station will be able to run at a lower cost due to shared
facilities. Maybe some of the AMers will move up there and take up some of
the slack.

>
> Don't see how anyone looking at the situation with an honest eye can see

I think IBOC FM has a chance. The bigger issue is whether there will be enough radios to get the extra programming.

Frank Dresser

It sounds like keeping promises is everything. It's harder for a company to
sell big ticket items when they look like screw-ups.

Speaking of AM stereo, windows and car analogies, imagine it's 1955 and
Chevrolet tried to sell their new V8 car at a higher price than the well
established Cadillac V8. They couldn't. The Chevy V8 would have failed,
not because it was introduced years after the Caddy, but because they were
trying to get people to pay more than what they already knew a good V8 car
should cost.

If the stereo on AM was practically a give-away, as it was on FM, it would
have suceeded even into the 90s.

In the Summer time,Earth is a few million miles further away form the Sun and the Northern Latitudes are tilted toward the Sun.In the Winter time,the opposite is true.That is why we have Winter,Spring,Summer and Fall.Maybe all of that has something (along with the Sunspots too) to do with radio reception.Well,of course it does.

My DirecTV Radio tv satellite signal quit at 1:42 PM this afternoon because it is stormy weather between my satellite dish and that ''Bird'' way up there in the Sky and I can't watch Dangerous Crossing movie on tv now,but we are getting a very nice Rain right now.Come onnnnnnn,Rain.

The range is extreme, but not outlandish.

>
> Most modern, IE "solid state", receivers I have measured have less
> 1V. All that I have seen that use discrete diode detectors as oppossed
> to ICs, have farily high AF gain stages.

But I'd expect considerably less distortion at 3V rather than 1V.

And I'd also expect that no radio really uses a square law detector to
detect the audio. Real detectors try to linerize a diode's operation by
lightly loading the detector with a reletively high resistance and trying to
minimize operation in the diode's "square law" area. Both voltage and AC/DC
impedance are important considerations in determing diode audio detector
distortion.

I suspect the term "square law detector" is the same sort of term as "first
detector" -- what's now known as a mixer.

I know I've been tripped up by these archaic terms before.

Actually shortwave propagation has very little if anything to do with the
'weather'.

The 'space' part comes in because of the effect the sun has on propagation.
Therefore it is 'space weather' vs. terrestrial weather.

That's primarily becaue those signals were most ikely not following a
trans-polar route but rather a trans-equatorial path.

In some instances solar storm conditions will actually cause trans-equatorial
path signals to be enhanced.

I shortened "space weather" to just "weather" since it is the subject
and I used the full term first and was attempting to be less formal in
my post. I guess that was unclear writing on my part. Yes, I agree
Australia and NZ propagation to me is not over the poles and that
propagation over the poles is generally the most affected by geomagnetic
storms. I guess I was unclear there also.

That seems to be the case.

4597. Shortwave Listening (SWL) : Active Antenna ? -or- Wire Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-07-28 20:02:14 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1154116934.264656.279590@s13g2000cwa.googlegroups.com>
Source record: 85782

SD,

For Shortwave Listening (SWL) what you would spend on an
Active Antenna; you could buy a good 'passive' Wire Antenna.
* Your Location {Region} and Weather can be a Factor in
your choice of Antennas.
* The RF Environment {Noise} of your Location {Neighborhood}
also can be a Factor in your choice of Antennas.

1 - Two Major Determining Factors would be :
* The Size-of-the-Area {Space} that you have to put the
Wire Antenna up in; and the relative noise of your location.
- - - - - vice - - - - -
* The Distance-Away-from the Home and other Sources
of Noise that you could Locate the Active Antenna.

2 - Here are a few Good "Out-Side" 'passive' Wire Antennas
for the Shortwave Listener (SWL) : {Sized - Big to Small}
* Alpha Delta DX-Ultra Antenna
http://www.universal-radio.com/catalog/sw_ant/3377.html
* Antenna Supermarket Eavesdropper SWL Sloper Antenna
http://www.universal-radio.com/catalog/sw_ant/0013.html
* * Par Electronics EF-SWL Antenna - Rigged as a
15 Foot Vertical by 30 Foot Horizontal Inverted "L"
{Low Noise} Antenna with Coax Cable feed-in-line.
http://www.grove-ent.com/ANT8.html
http://www.universal-radio.com/catalog/sw_ant/2205.html
* RF Systems Mini-Windom Antenna
http://www.universal-radio.com/catalog/sw_ant/3575.html

3 - Here are a few Good "Out-Side" Active Antennas for
the Shortwave Listener (SWL) : {Priced - High to Moderate}
* Dressler ARA60S Active Antenna
http://www.universal-radio.com/catalog/sw_ant/4061.html
* RF Systems DX-10 Professional Active Antenna
http://www.universal-radio.com/catalog/sw_ant/2868.html
* * McKay Dymek DA-100E Active Antenna
http://www.universal-radio.com/catalog/sw_ant/0328.html
* LF Engineering H-800 Skymatch Active Antenna
http://www.grove-ent.com/ANT15.html
* MFJ-1024 Active Antenna
http://www.universal-radio.com/catalog/sw_ant/1132.html

Most of these are considered to offer Full Spectrum Coverage of
both the Medium-Wave and Shortwave Bands : 500 kHz - 30 MHz.

FWIW - As time goes on you may wish to have both an
Out-Side Wire Antenna and an Active Antenna as a "Pair"
of Antennas to Choose from for a variety of Shortwave
Listening (SWL) needs.

The loss was based on a huge nonrecurring item that did not affect EBITDA.
They are projecting free cash flow by Q4 of this year or 1 of next year,
which is on track.

They revised down the figures based on straight line projections, but these
are still in line with the original projections when XM launched and were
part of the early press releases in 2001.

It is a stunt, designed to run a few days while the real format is being readied. It is like doing a heartbeat for all weekend, or playing the same song over and over... also attention getters used to announce that what was there is gone and a new format is coming.

We do not sell ads on stunting days.

> able to attract advertisers or contributors?

Stunting prior to a new format is and has been the norm for 5 decades of US radio. Stunts run a few days to a week or so, but are usually not as creative as this... often they are the songs of construction work (saws and hammers) or a heartbeat or a clock counting down. Or the favorite, play the same song over and over for days.

> It's a sad state of affairs that the new owners think a tasteless approach
> will increase income.

It is a stunt, not intended to create income. It is intended to get publicity. Which it did.

> David Eduardo is probably right when he says there will be another change
> once the initial 'excitement' is over.

Yeah, in a couple of more days.

> It's all publicity.

Correct. It is not a format, it is not intended to be listened to. It is intended to garner attention.

I wonder when there is a coronal hole that AM radio at night is very
poor even if K or A index is low.
I have noticed this over years of checking propagation that coronal
hole output = poor reception on AM at night.

Any explanation of why coronal holes effect AM more than B-C Class
solar flares or I am I wrong in my observation?

Kim

HD works for its announced purpose, which is improving local listening to
local stations.

Unless something out of the wild happens with RIAA (which would require a
new chipset design for the "flag") there is nothing stopping HD at this
point, despite what consultants who seldom see the inside of a radio station
say.

Nope. Exclusive format in about 80% of the Houston Metro, viable audience
group, and strong demand already. We now have to give websites like
Crutchfield, as the few HDs available in HOU are gone.
```

Interesting idea, but most publications have beaten HD to death... RW is full of pros and cons. Interestingly, the cons are all from folks who don't run stations or are at stations that don't want to spend any capex dollars.

The end result is that HD is now on 1000 stations, with another 1000 on the way and another 1000 committed for. Just the first 1000 reach over 70% of the US population.

While an external antenna, such as an Eavesdropper, would be the best
solution for you, an internal active antenna such as the Radio Shack
amplified shortwave antenna is good too!

And on car radios it was. It was included in all Chrysler radios from
the beginning, up to a few years ago when it was an option on the higher
end stereos.

GM did AM stereo on it's radios, too, eventually moving it to the
higher end rigs, and as with Chrysler dropped it.

What they really screwed up on, is that no one made an issue of it.
It was rarely spoken of. No promotion at all. Unlike FM stereo which
was. And there were still few AM stereo stations.

Even when it was heard, though, it still made no impact, as most
listeners didn't recognize it as stereo audio.

Which is also true of FM. Most FM listening in this the US is mono,
even though most radios and radio stations are running in stereo.

> bureaucratic decisions.

Demand by the Federal Governmental is not the same as consumer
demand, I'm referring to consumer demand--market force. A Governmental
decree is no match for a market which is not interested. If the FCC had
ordered implementation of AM stereo, there's no guarantee that AM stereo
would have caught fire. There's every indication that the public
wouldn't have cared.

What would drive AM stereo is not what drove FM stereo. And the times
were different. FM stereo when introduced was a new and exciting
concept. Most Hi-Fi systems were still mono at the time. Even the higher
end units. Stereo radio was a dramatic improvement, or at least a
change, from mono sound on, compared to stereo sound which was available
on records.

AM stereo was introduced 20 years after stereo FM had become
commonplace. Stereo was a non issue. No mono Hi-Fi sets had been
produced in years by that time. And much of the stereo depth of field is
carried in the upper mids and top end of the audio, where AM is commonly
deficient. Many listeners to AM stereo weren't aware they were listening
to AM stereo, even when it was on their radios.

So, even if there had been a mandate by FCC, AM stereo would have
been a non issue to the listening public. AM music listening had already
migrated to FM, and AM Stereo didn't make enough of a difference to the
listening experience anyway. The window of opportunity had been missed.

It was too late.

It's been demostrated time and again, that price is a minor issue, if
at all. People will pay for the content they want, if the content is not
available elsewhere. What's more to the issue, though, is that with HD
Radio, the listener has to make the buy-in BEFORE he can discover if
he/she enjoys the content.

That will make a difference.

> "first detector" -- what's now known as a mixer.
>
> I know I've been tripped up by these archaic terms before.

I'm not a radio circuit designer but detectors circuits are designed for
a certain situation and will not produce the expected output if the
expected input conditions do not exist. All RF carrier and sidebands

(tones) are an alternating wave forms. To recover the AM modulated information the sideband tones are rectified and averaged, which is the low frequency audio modulation. The sideband tones are usually much lower than the carrier but the detector rectifies all of these signals. For the detector design a minimum signal level is required for it to rectify the side band tones and the designs have depended on the carrier to be there so that the detector is switching on and off into the liner region of the diode. If the carrier is not there then the sideband tone signal is switching the diode on and off resulting in a lot of distortion.

The sync detection uses a PLL circuit to lock a local oscillator to the received carrier and that is summed with the received carrier and side band tones so that when the received carrier disappears due to selective fading the locked local oscillator signal is enough to keep the detector operating in its liner region with just the side band tones present.

The same thing happens using a BFO or when you switch to SSB mode on a radio but here the local oscillator is not locked to the received carrier and you have to tune the radio very carefully to get it spot on the received carrier frequency so the side tones are reproduced at the original modulation audio frequencies.

Before sync detection circuit designers would use diodes with smaller non-liner switching regions using germanium for example with lower forward voltages. These diodes would need less signal power to turn on and off into the liner region of it operating curves so less energy from the carrier would be needed to keep the detector in its liner region. This is a help when the received carrier only fades a little but does not help if fades a lot or disappears.

Some detector designs would use a DC bias on the diode to put it on the edge of its liner region to improve its small signal sensitivity. The optimum bias voltage will depend on the diode characteristics.

That's because it was misnamed IBOC. It should be IBOAC for In Band On
All Channels. It's hard to get all the modulator, transmitter, and
antenna parameters right or it spreads out.

> Really? What kind of filters does the Drake R8 series use?

As a demod filter? I would image a low order active filter to clean
things up. Remember, this is the audio band, not RF. I've seen some
write ups on 455khz IFs being done with active filters.

Kiwa sells an active filter for 455Khz
http://www.kiwa.com/kiwa455.html

Note the AR7030 has "tone controls", so certainly it has an active
filter past the demod. The problem with building LCR filters in the
audio band is they are bulky, not to mention often inaccurate. With
active filters, you have more flexibility over component values.

Absolutely correct! If the broker *really* knew what the hell was going on there would be no need to go to work every day as a broker.

Brokers are no more than glorified salespeople or shills, much like Edweenie!

If he wants to spend the dollars, the Wellbrook loop
will do well, especially if he has local noise to deal
with.

There are some web sites dedicated to hunting and identifying
Non-Directional Beacons (NDBs). This is one I like:

http://mare.radio.tripod.com/4ute.html

Also look in to

http://www.lwca.org/

Most NDBs are pretty dull listening. A very few broadcast AWOS and ASOS
weather from the airports where they're located. But that's about it.
I'd be more excited about transatlantic LW reception...

Active antennas can be reasonably good, but there is one tiny hitch:
You need to isolate it from all the electrical and computer hash you'll
generate in your house. Do not buy a cheap active antenna or you'll be
sorry.

It's actually easier to erect a random wire antenna and use it instead
of an active antenna. That said, a well isolated loop antenna with an
external power supply, isolated from the rest of the house, might be
just what the doctor ordered for a small suburban lot. Loop antennas
have the advantage of being able to null out local groundwave signals.

However, if you have more than fifty feet of distance available to you,
I suggest you look in to the random wire first. It's cheaper, and it
just plain works...

Drake uses an LC filter in the IF. They "Get away" with it becuase of
the
lower IF they use. R390s, original not the R390A, and the R392 use
several staged of LC filters and have excellent skirts.

The Kiwa filter you refference is not a "active filter", but a ceramic
filter
with amplification. To me active filter means opamp or norton amp
with feedback to control pass/reject charactoristics. The premium Kiwa
unit is nearly as good as a crystal or mechanical filter and MUCH
easier
to connect. I installed one in a friends R2000 and was impressed by
the quality and how well it worked.

A big advantage of passive LC filters is they are much less "fussy"
then active filters. I like not having to mess with power and proper
bypassing.
And if you are willing to wind your own torroids, it is pretty easy to
get the
L very close to what you want. The C can be built with standard value
caps in parallel.

The Tone-Tilt filter I used in all 3 of our R2000s is active because it
would be
VERY difficult to use LC filters effectively.

Steve:

IF you live in a Very , low noise environment;

- Or can move the active antenna out away from your home, Into a low
noise environment, then I suggest messing around with this.

Putting up an active antenna in a noisy environment will just ..
Amplify the ambient noise as well as Shortwave Signals

Suggest Just use a regular random wire, with a co-ax feed.

Congratulations on th R-75

It depends on your location and what you want to listen to. A 50'
random wire is OK for SWL but it has nulls and is somewhat weak for
MW. A coax matcher and cable complicates the installation.

I'm away from any strong local signals and get really good service out
of an MFJ-1024 on my bedroom radio. I can hear KOMO 1,000 very
reliably every night and I'm 3 states away.

My brokerage account gives me free access to Edgar, as well as many analyst
reports, all kinds of analysis of financials and fundamentals, as well as
the latest SEC reports. It is vastly more ample than what I could do on my
own, and includes many sources that individuals can't even get except
through a broker or investment banker.

Most brokers give their accounts, depending on level, access to all kinds of
tools and reports and software. I get access to the Edgar reports free,
among many other things my brokerage account gives me.
>
> Brokers are no more than glorified salespeople or shills, much like

I practically never talk to a broker. I do everything online, except things
that are not easy to do, like exercise warrants or sell stock options.
Otherwise, I use the broker-provided research and tools to explore
opportunities.

For an example of what I consider to be a very usefull filter, please look at:
<http://members.tripod.com/roymal/ReverbTone.htm>

With minor component value chages, it is easy to get more or less cut/booast and/or frequency range.

Please note that I had nothing to do with this page, I found it usefull.

Terry

He's just as BUSTED there as he is here. I initially thought he was a
young person, yanking people's chains, not really understanding what
he's talking about but also not caring that he didn't understand.
However, if you look at the photo of him on that NAB website, he's an
old guy! I couldn't believe it.

r2000swler@hotmail.com wrote:

> Dallas Lankford has done some serious research on the cause and cure
> of/for
> the distortion caussed by ionospheric "hops".

Interesting! In the RTTY world, this is known as selective fading.
Usually an o'scope is used as a tuning indicator, one set of deflection
plates being connected to the "mark" signal and the other set of
deflection plates being connected to the "space" signal, giving the
classic "cross" display (looks like a 'plus' sign on the screen).

The mark and space signal generally used to be 850 Hz apart, commercial
press stuff 425 Hz apart and most of the stuff today using a 170 Hz shift.

During disturbed ionospheric conditions, you would see this selective
fading come into play; i.e., either the mark or space would fade to
nothing while the other signal was solid--even though they were only 170
Hertz apart.

> able to attract advertisers or contributors?
>
Not at all. The facts: For many years, K-LOVE (www.klove.com) was
using this frequency (106.3) to serve an area around Kingsburg to
Fresno. But in recent years K-LOVE added two more powerful stations at
88.5 and 91.1 that serves a larger area including the Kingsburg to
Fresno area. There was no sense keeping all three stations for this
area so they sold 106.3. Just look at www.klove.com and see how many
stations they own in the US and you will see christian radio is not
losing people. K-LOVE is adding stations all the time to their network.

The earth is closest to the sun (perihelion) in early January which is summer in the southern hemisphere. Six months later in July we are farthest from the sun (aphelion) which is summer in the north. This is why shortwave conditions are generally poorer at this time of year in the northern hemisphere because we are farthest from the sun and therefore receive less radiation to energize the ionosphere. The longer days of summer in the north help to compensate for this effect to a certain degree but not completely.

> >* Your Location {Region} and Weather can be a Factor in
> >your choice of Antennas.

- It depends on your location and what you want to listen to.
- A 50' random wire is OK for SWL but it has nulls and is
- somewhat weak for MW. A coax matcher and cable
- complicates the installation.

David - The Par Electronics EF-SWL Antenna
* That is Rigged {Set-Up} as a 15 Foot Vertical by
30 Foot Horizontal Inverted "L" {Low Noise} Antenna
with Coax Cable feed-in-line and remote Ground Rod.
http://www.grove-ent.com/ANT8.html
* Gives good all-around Shortwave Band reception and
works well on the AM/MW Band Antenna too.
http://www.universal-radio.com/catalog/sw_ant/2205.html
* It is no more complicated to install then most
small Active Antennas.
* Active Antennas need to be installed properly and
in the right location. Otherwise they can be great
Noise Amplifiers and make Radio Listening a pain.

- I'm away from any strong local signals and get really
- good service out of an MFJ-1024 on my bedroom radio.
- I can hear KOMO 1,000 very reliably every night and
- I'm 3 states away.

David - The MFJ-1024 Active Antenna was on the list
of Active Antennas that I provided.
http://www.universal-radio.com/catalog/sw_ant/1132.html
* For many who can not have a very 'visible' Antenna
small Active Antennas like the MFJ-1024 do a very
good job in letting them hear what they want to hear.
* The only feature of the MFJ-1024 that I do not like
is the Telescoping Whip Antenna.
* * I would replace the short Whip Antenna with a
solid CB Whip Antenna mounted on a piece of 21

Foot Top-Rail and 50 Foot of Coax Cable to get it
away from the House and out-side Up-in-the-Air.
* * Small Active Antennas like the MFJ-1024 some
times can be used In-Side the Attic with a Pair of
Perpendicular One-Metre Diamond Wire Loops.

and that's my view from the far side of . . .
the antenna wire - iane ~ RHF
.

All I see is an RF-2200/DR22 with a "Buy It Now" price of $425 listed
by someone named MMaghakian, who says to "buy from an expert."

Gee! In the SWL'ing world, this is known as selective fading.

Who woulda thunk it.

It's multipath distortion.

This is no different than any other wire antenna with a coax matcher.

I have a random wire. A random wire with an MLB. And the MFJ-1024.

I posted my observation.

I don't appreciate your Doctor Bronner on Acid replies. They are
anarchy and they are more confusing tha helpful.

You have issues.

Well, it works.

I have been playing with the ELPAF since last autumn; first on my R-390A, which, despite having done the AF Deck mod, does have its quirks with regard to audio quality. The ELPAF cleaned up audio admirably. Mostly doing MW DX then. Then, this summer together with a modified IC-703 mostly on SW. It practically eliminates the distortion caused by fades, as well as high-frequency hiss and noise giving an audibly better signal to noise ratio. The trade-off is of course a more limited audio response. Personally I can live with that - I never use bandwidths wider than 6-7 kHz anyway. My ELPAF has a bypass switch so it is easy to compare audio quality.

I used to have an SE-3 as well, and enjoyed the excellent audio it produced. The ELPAF does little less with regard to audio recovery. I am thinking about doing an A-B comparison between the two later on.

168 bidders qualify in FCC auction
http://www.siliconvalley.com/mld/siliconvalley/business/technology/15147966.htm?source=rss&channel=siliconvalley_technology

BRUCE MEYERSON

Associated Press

NEW YORK - The Federal Communications Commission on Friday issued a list of 168 bidders that have qualified to participate in an upcoming auction of wireless licenses that is expected to raise billions of dollars for the government while ushering in more next-generation services.

The auction of 1,122 licenses, slated to begin on Aug. 9, covers slices of the airwaves that are currently used by the federal government. The FCC also issued a list of more than 80 would-be participants whose applications were rejected.

The qualified bidders include T-Mobile USA, a unit of Deutsche Telekom AG that badly needs more spectrum so it can introduce the speedier Internet connections that its main cellular rivals already offer. Two of those competitors, Cingular Wireless and Verizon Wireless also were on the list of qualified bidders even though both already have much more spectrum than T-Mobile.

Also qualified to bid was Lynch AWS Corp., an entity led by money manager Mario Gabelli, who earlier this month reached a settlement of charges that he had defrauded the government in wireless auctions between 1995 and 2000. Gabelli and his affiliated companies agreed to pay $130 million to settle a civil-fraud suit.

Well, this Peter Collins is NOT very informed about this "new"
technology. It's obvious that the local utility has shoved some bucks
into his pockets. What is it with these politicians and BPL. Just
like flies to shit!

I have a Dymek Stoner DA100E active antenna, indoors. It works fine,
doesn't take up much space, but a full size outdoor wire antenna
provides stronger, louder reception of signals.

A big wire antenna is cheaper, the active antenna is more convenient;
take your choice.

Yeah, although he can't get his story straight about exactly what his
job title is. Sometimes it's VP, sometimes it's President. Judging from
the record, he was a President some years ago and is now a VP. Would be
interesting to know how that little shift came about. But whatever his
title, he's a sad commentary on Univision.

```

I have the title straight. It was for a half-decade Vice President, programming, and is now EVP. Very simple. There are no "presidents of programming" anywhere. NAB goofed, but nobody except you seems to care. Not the 10,000 people at the convention, not my comapny, not my associates.

I was never President of the company.

The Stoner and the MFJ-1024 are essentially car radio antennas. They
are omnidirectional and vertically polarised. These can be
advantageous attributes sometimes. The more antennas the merrier.

4703. CNN's Anderson Cooper: Hezbollah Propaganda

Newsgroup: rec.radio.shortwave
Date: 2006-07-29 15:58:25 UTC
From: Mahmoud Ahmadinejad <read@book.com>
Message-ID: <12cn1mdbml46s3e@corp.supernews.com>
Source record: 85690

CNN's Anderson Cooper: Hezbollah Propaganda
...
12:05 p.m.: Our car is being led through back streets to a broken-down building with five ambulances parked in front. "These are the emergency workers who respond to casualty calls when Israel drops their bombs," the Hezbollah man says. "Take your pictures and talk to some of them if you'd like." We're growing tired of what is now obviously a dog-and-pony show, but we decide to play along, and approach one driver with a few questions. Anderson asks him what kind of casualties he's seeing, but before he can answer, the ambulance beside us turns on his siren and screeches out, followed by the next ambulance, then the next. It's a well coordinated and not-so-subtle piece of propaganda that might as well come with a soundtrack titled "Hezbollah Cares."

12:16 p.m.: We again ask the Hezbollah guy (he won't give us his name) when we can talk to some residents, but he brushes us off and tells us maybe at our next stop. He's now on his cell phone and it's not hard to imagine he's making sure all the props are in place before we move on. I wish I spoke Arabic. He opens our car door, slides in, and says he's riding with us. We're fine with it and offer him a bottle of water. "No thank you," he says in English. While we have his attention, Anderson asks him if we can talk to someone in Hezbollah's leadership. His answer is short: "Not while we're at war." He gets out of our car and onto the back of someone's motor scooter.

12:30 p.m.: We're now driving through a neighborhood that hasn't seen any bombing, but it's here we're told we can talk to some residents. Hezbollah guy takes us down to what amounts to a crude bomb shelter and tells us the people here live on this street but are afraid to sleep in their apartment. The concrete room is dimly lit and dank. Two people on plastic chairs are watching an Arabic news channel. One sits in the corner yelling angry epithets about Israel for the reporters. We wait for the media gaggle to leave, then introduce ourselves. They tell us they're a mother, her son and his wife. There's no way to know if it's true. The conversation follows a familiar pattern:

"Are you scared?"

"No!"

"Will you fight?"

"To the death!"

"Do you hate Israel?"

"Of course, and its mother America!"

We thank them for their insights and move back up to the street.

12:44 p.m.: We're back on the street and on cue, a Hezbollah resistance song is now blaring from an apartment. A young man on the porch dressed in black is giving us the victory sign. I look behind me and there's our Hezbollah guide encouraging the young man to lift his hands higher so our camera can see.

12:50 p.m.: Anderson is doing a few more stand-ups about our story that's quickly become less about Hezbollah and more about their crude propaganda machine when the "family" emerges from the bunker behind us and joins their friends in the street. They're laughing, talking loudly, and gesturing with their hands, mocking anger. I really should learn Arabic. Anderson does another stand-up about the group now standing behind us.

12:55 p.m.: We pile into our van and are now driving out of the Hezbollah-controlled neighborhood. It feels like we've just left a haunted house: Slightly frightening at first, but ridiculous by the end.

Yeah, it's probably a lot easier to keep your lies in the proper order
there.

BUSTED.

Here is the following from an exchange in alt.politics.immigration:

"krp":
Do you also recall claiming to be an ECUADORIAN REFUGEE who knows as well as Cubans do having to flee THEIR country?

"David Eduardo":
You get everything mixed up. I said I was a refugee myself, as I had to flee Ecuador to avoid being killed. In fact, I was a matter of days away from becoming a citizen at that time.

"dxAce":
Nowadays one must renounce their current citizenship and give up their current passport to become a citizen of Ecuador.

"David Eduardo":
Not then.

"dxAce":
Did you at any time renounce your citizenship and if so, when did you un-renounce it?

"David Eduardo":
Are you an employee of the Department of State?

"dxAce":
Nope. And you didn't answer the question.

"David Eduardo":
You figure it out.

"dxAce":
I'll take that as a yes, you did renounce your citizenship. Any true American would never hesitate in answering that question.

"David Eduardo":
It is simply none of your business.

"dxAce":
Ahhhh... another 'YES'. You really are a worthless piece of shit, aren't you, Frackelton?

More insight into the workings of David Frackelton Gleason, posing as 'Eduardo'... shill for Univision, and apparently a very disloyal American as well?

ANY Chinese who can post on a Usenet newsgroup is most definitely well connected with the Chinese Communist Party.

No one in China has free access to Usenet newsgroups unless they are cleared by high level political authorities. This person is most likely connected with the Communist People's "Liberation" Army - PLA.

It is also likely this person is phishing for western contacts to groom them to provide high tech to the PLA.

Read the August issue of Popular Mechanics for a very insightful article about Chinese spies in America and their techniques.

i dont have that particular radio but none of the several different sangean models that i own have "electronic switching". i cant think of another radio that i have ever used that didnt use mechanical switching on the power jack. if that radio does have this feature then it seems to be of a more advanced design than is common. perhaps other circuits are superior also? you know sony.... better quality, but usually just a little bit odd.

>

There's a linear region in the usual model of a semiconductor diode (a fixed voltage drop with a series resistance), but that model is only an approximation. The other model, the square law model, is also just an approximation, although it's supposed to be close enough over small parts of the curve.

However, the diode doesn't have to be linear in order to have a fairly linear diode detector circuit. Imagine we have a diode whose forward resistance drops in a square law with the voltage. At 0.1V the forward resistance is 1 meg. At 0.2V the forward resistance is 1K. At .0.3V the forward resistance is 32 ohms. At 0.4V the resistance is 5.6V, and so on.

Now, let's put this nonlinear diode in series with a linear load resistance and decide that the circuit is pretty much linear once the diode resistance drops to 10% of the load resistance. Well, it's obvious that diode detector circuits which work into higher resistance loads will linearize themselves at lower voltages than diode detectors which work into lower resistance loads.

Below a certain voltage, the diode's non linear characteristics will dominate the detector. Low voltage signals will have much more of their waveform in this funky reigion than high voltage signals, even at the same modulation index.

So, as I see it, there's alot more to know about a diode detector's audio distortion than only the modulation index. There's the actual characteristics of the diode, the resistance of the load and the signal voltage the detector is operating at.

There's also the RF filtering, which will tend to "sawtooth" the audio a bit, much as the rectifier and capacitor do in a power supply. There's also some resistances/capacitances in the AVC line.

But I could be wrong. If so, let me know!

Frank Dresser

Except we are not talking about IF filters .The "fading" filter is at
the end of the chain, i.e. past the demod.

Except this is at audio frequencies, where the component sizes are much
larger. Again, this is not at IF frequencies.

Lies of the Left II: Osama

From almost the first days of the War on Terror, leftists and anti-American writers and speakers have blamed the U.S. and the CIA for "creating" Osama Bin Laden and his Al-Qaeda network. They have argued that the U.S. support for the Afghani mujahedeen fighters, funneled through the CIA and Pakistani intelligence agencies, allowed Bin Laden to build his network and, in time, turn it against the U.S. Among intelligence experts, this phenomenon is called "blowback" - the occasional situation of an agent turning against his handlers and supporters. Although blowback could be a reasonable fear with creating an agent, it doesn't apply here, in fact, most of the claims of leftist critics are completely unsupported by facts.

Lie Number One: The CIA recruited Osama Bin Laden, and thousands of Arabs, to fight in Afghanistan against the Soviet Union.

Truth: The CIA didn't recruit anyone to fight in Afghanistan, not even Bin Laden.

After Soviet troops entered Afghanistan in December 1979, the native Afghan fundamentalist factions that opposed the Soviet puppet regime were galvanized. Not only did they have a war against the ruling government, they had an actual superpower to declare jihad, or holy war, against. The call for jihad resonated throughout the Islamic world, striking a chord among the most fervent and extreme Islamic factions throughout the Middle East. Among these fundamentalists was a young Arabian son of an extremely wealthy and well-connected family - Osama Bin Laden. Without any active participation from the CIA as many as 25,000 Arabs went to take part in the jihad[1]. They went to join in the only legitimate holy war that was available to them at the time. As for Osama, he is reported to have told an interviewer from Arabic language Al-Quds al-Arabi, "I was enraged, and went there at once."

Of course, there was really no need for any Arabs to be recruited for the struggle. Even if substantially more than the estimated 25,000 Arabs went to Afghanistan, the native Afghans involved in the jihad against the Soviet-backed regime numbered in the hundreds of thousands. The Arabs who came to join in were often reported by the natives to be more of a pain than a help. "They thought they were kings," was what one Afghan told a reporter. The Arabs were more ignored by the Afghans than not. John Simpson, a BBC reporter, recounted that he had an encounter with Bin Laden. Bin Laden ordered the reporter's Afghan driver to kill him, offering the driver five hundred dollars to do so - a very reasonable sum for an act which would have few consequences. The driver refused. Bin Laden was reported to have wept on his cot in frustration afterward.

Lie: The CIA trained Osama Bin Laden, and his supporters, in how to wage terror as a weapon of war.

Fact: The CIA trained absolutely no one in Afghanistan, or in neighboring Pakistan, neither in the tactics of terror or even in how to use the Stinger missiles provided to the Afghans.

The entire CIA effort in Afghanistan was more logistical than operational. Vince Cannistraro, the National Security Council staff director who headed up coordination of policy for Afghanistan in the mid-1980's told author Peter Bergen that there were only six CIA employees in Pakistan at any given time - and none actually in Afghanistan - and that they were administrators rather than field officers. Bergen also reports that CIA officials only rarely met with leaders of the Afghan resistance, and never with the Arabs who came to the jihad. This is not to imply that U.S. officials never met with Afghan leaders. They did. There were plenty of photo opportunities to be had, and elected and high level bureaucrats often took advantage of them. But to believe that, say a Congressional staff member went to Afghanistan to train resistance warriors, much less terrorists would be pushing the bounds of possibility.

What the CIA did, in reality, was buy weapons, ammunition, and supplies, in vast quantities. The Pakistani intelligence agency, the ISI, distributed the weapons and supplies once the Americans delivered them. This was a fundamental rule of Pakistani policy according to Brigadier Mohammed Yousaf, who ran the ISI operation in Afghanistan between 1983 and 1989: No American was to come into contact with the mujahedeen and no American was to be involved in the distribution of arms or supplies once they arrived in Pakistan. So far as the Arabs who went to the jihad, such as Bin Laden, were concerned, there was even less contact between them and the Americans. The Arabs had their own sources of funding and support, and no need of the Americans at all.

What training was provided was provided by Pakistan and likely did include terror tactics. The Pakistani's were no strangers to terrorist activities. They had been supporting terrorism, mainly in the Kashmir region of India, since the 1970's[2]. The Pakistani's directed the bulk of American-financed support to the Afghan groups that were the most extremist, the most Islamist, the most violent. These groups were reported by the Pakistani's to also be the most effective, although those claims are questionable. The

group, which received the highest percentage of aid, as well as the most support from Arab sources, was the Hizb party, which was headed by a Muslim fanatic named Gulbuddin Hekmatyar, who was a Pakistani agent from long before the jihad began.

There were more moderate Afghan commanders available, but they were not trusted so much by Pakistan, and therefore weren't seen as reliable by the Americans. Perhaps the biggest mistake the U.S. made in the Afghan operation was in not taking greater account of who the Pakistani's were paying with our tax dollars. However, the ISI was seen as being more familiar with the situation "on the ground" and was allowed to run the show. If the CIA had taken a stronger hand in determining the allocation of support, it was likely that the ISI would have stopped funneling any support to the Afghans.

Lie: The CIA helped Bin Laden build an underground camp at Khost, which was used to train terrorists.

Fact: An Afghan commander built the camp at Khost in 1982, with funding from Saudi Arabia. As stated above, there were few instances of any Americans going into Afghanistan. It would be too dangerous to hand the Soviets or their supporters a propaganda victory by allowing them to capture an American.

Even if Bin Laden had been involved in building the Khost camp, as he was involved in building other camps, he would not have needed CIA help to do so. Osama had no difficulty in using equipment from his family's construction empire to build camps, tunnel complexes, etc., in Afghanistan.

Lie: The CIA helped Bin Laden all along, and continues to help him.

Fact: Bin Laden never had any relations with Americans or American officials. Al Qaeda sources told Peter Bergen that Bin Laden was predicting conflict with the Americans from the early 1980's.

To seriously believe that Bin Laden would willingly have ever worked with the Americans, one would have to so completely discard common sense as to believe that Bert the Sesame Street character really was an Al Qaeda operative because he has been seen in Internet photos with Bin Laden.

After the Afghan jihad ended, Bin Laden went home to Saudi Arabia, where he predicted that the Saudi kingdom would soon have to face Saddam Hussein and proposed using Arab veterans of Afghanistan to protect the land of the Prophet. When American troops arrived to drive Iraq from Kuwait and support the de facto alliance with Saudi Arabia, Osama grew quite irate. Even today, one of the continuing demands from Al Qaeda is the immediate departure from Arabia of all American troops.

As is clear from the facts, the accusations by the Left of an American role in the creation of the Al Qaeda terror threat are, at least, greatly exaggerated. While the efforts of the U.S. in Afghanistan during the 1980's were not without some errors, they did not lead to the fostering of the threat to world peace and order that Osama Bin Laden and his followers represent. Even without American involvement in the Afghan jihad, it is at

least as likely that Bin Laden would have been involved and found his "calling" as the ringleader of present day international terrorism.

Even if the accusations from the Left were true, and the U.S. took some responsibility for the "creation" of Al Qaeda, one must look at what was gained. In Afghanistan, the United States became involved in order to, as Zbigniew Brzezinski put it, "to sow s**t in [the Soviet's] backyard." In supporting the Afghans against the Soviets and their puppet regime, we succeeded in draining the might of the Red Army and likely bringing a faster end to the Cold War and the liberation of not only Afghanistan but the freeing of more than a billion people in the Soviet Union and Eastern Europe.

One must always consider the source in any propaganda campaign such as the one represented by these charges. Here, the left-wing, Blame America First extremists would rather apologize for the individual responsible for killing thousands of Americans and blame the victims for those murders. Reality shows another explanation.

---

[1] The figure of 25,000 Arabs comes from both sources close to Bin Laden and the CIA.

[2] This support continues even today, and may yet lead to war between Pakistan and India.

The Left's Ongoing Lies About Vietnam

THE SUFFERING of the Indochinese people under communism is one of the most tragic sagas of the 20th century. The terror that communists perpetrated in Vietnam, Cambodia and Laos after their victory in 1975 defies simple characterization.

The leftists among us, meanwhile, continue to spout their lies about Southeast Asia and about the horror that communism brought to that region.

Just like contemporary neo-nazis who revel in practicing holocaust denial, leftists just simply can't help themselves from engaging in gulag denial. They love erasing the historical memory of the millions of people who were liquidated on the altar of socialist ideals. And engaging in historical amnesia is precisely where socialists and neo-nazis share one of their most sacred common bonds.

And now we have H. Bruce Franklin, a professor of English and American Studies at Rutgers University, who has stepped forward to tell us that communism only brought peace and fraternity to Indochina.

In the March-April 2002 edition of the International Socialist Review, which is otherwise known as the Journal of Revolutionary Marxism (and this title is not meant to be a joke), Franklin writes an article glorifying the memory

of the anti-war movement in America during the Vietnam War. Titled "Vietnam. The Antiwar Movement We Are Supposed To Forget," the essay is an excerpt from Franklin's book Vietnam and Other American Fantasies (University of Massachusetts Press, 2000)

Franklin pleads with his readers not to forget the anti-war movement, which he complains the capitalists in America have forced people to do. He emphasizes that remembering the anti-war movement is crucial, since it triumphed in bringing about an American defeat and a communist victory in Southeast Asia. And he means this in a positive sense.

Usually I read the International Socialist Review for the same reason I read other Marxist and socialist literature: for a good laugh. It really is very amusing. Sometimes I get the giggles for hours on end after reading our contemporary leftwing intellectuals' ongoing agony about capitalist modes of production, surplus value, expropriation, and the near-approaching Marxist revolution. Reading this stuff is sometimes so hilarious that I succumb to sidesplitting fits of laughter.

But oftentimes it's not very funny at all.

Aside from how pathetically stupid it is, there is little that is funny about Marxism.

There is little that is funny about a set of ideas that has resulted in the liquidation of a 100 million lives in the 20th century.

So this time around, I wasn't very humored when I stumbled onto Franklin's piece on Vietnam.

Franklin praises the anti-war movement, which allowed the communist victory and paved the road for the subsequent mass genocide in Indochina. He writes that the anti-war movement should be

"one legitimate source of great national pride about American culture and behavior during the war. In most wars, a nation dehumanizes and demonizes the people on the other side. Almost the opposite happened during the Vietnam War. Countless Americans came to see the people of Vietnam fighting against U.S. forces as anything but an enemy to be feared and hated. Tens of millions sympathized with their suffering, many came to identify with their 2,000-year struggle for independence, and some even found them an inspiration for their own lives."

It is precisely an interpretation like this that reflects one of the most putrid lies of the Left: that "the people" can somehow be associated with the communists who imprison them. In other words, Franklin writes on the assumption that the U.S. was somehow fighting the people of Vietnam, when in fact it was actually fighting the communists who were seeking to imprison them.

The fact of the matter is that it was North Vietnam and the Vietcong, as well as the anti-war demonstrators in America, who were the enemies of the Vietnamese people -- not the American government which sacrificed 56,000 of

its young men in an effort to save them.

Franklin gives us a long (and terribly boring) account of all the different groups that played a role in the anti-war movement. He is very proud in remembering the "outrage" that he says served as a key emotion behind anti-war demonstrations.

But I can't help from wondering, Franklin: just where exactly did all this "outrage" of the anti-war protestors go when the communists did not bring the paradise that the Left predicted they would? When the communists started liquidating people en masse and setting up concentration camps, where was the "outrage" of the Left then?

Franklin isn't interested in such questions. Instead, he warns us at the end of his piece that we cannot

"understand what America is becoming if we fail to comprehend how the same nation and its culture could have produced an abomination as shameful as the Vietnam War and a campaign as admirable as the 30-year movement that helped defeat it."

Sorry, Franklin, you got it twisted: it was the American effort to save Indochina from communism that was admirable. And it was the anti-war movement, of which you are so proud, that was the shameful -- and shameless -- abomination.

Franklin's article reveals to us an individual who clearly prides himself in having declared his partisanship with the communist enemy in the Vietnam War. His only regret is obviously what most of the unapologetic former anti-war demonstrators regret: that he failed to personally travel to Hanoi during the war to volunteer his personal assistance in torturing American POWs.

While Franklin boasts about what he thinks are the anti-war movement's great accomplishments, history reminds us that this movement helped spawn a bloodbath in Indochina. David Horowitz, who helped to organize the first campus demonstration against the war at the University of California, Berkeley in 1962, has reflected on this tragedy. In his "An Open Letter to the `Anti-War' Demonstrators: Think Twice Before You Bring The War Home," he recalls how the anti-war movement prolonged the war itself and how,

"Every testimony by North Vietnamese generals in the postwar years has affirmed that they knew they could not defeat the United States on the battlefield, and that they counted on the division of our people at home to win the war for them. The Vietcong forces we were fighting in South Vietnam were destroyed in 1968. In other words, most of the war and most of the casualties in the war occurred because the dictatorship of North Vietnam counted on the fact Americans would give up the battle rather than pay the price necessary to win it. This is what happened. The blood of hundreds of thousands of Vietnamese, and tens of thousands of Americans, is on the hands of the anti-war activists who prolonged the struggle and gave victory to the Communists."

Giving victory to the communists spawned a horror for Southeast Asia that made the Vietnam war look like a time of peace.

After Saigon fell to North Vietnam in 1975, the summary executions of tens of thousands of innocent South Vietnamese began. There were to be two million refugees and more than a million people thrown into the new communist gulags and "re-education camps." Tens of thousands of South Vietnamese boat people perished in the Gulf of Thailand and in the South China Sea in their attempt to escape what the likes of H. Bruce Franklin had helped to create.

The anti-war movement in America also facilitated the communist takeovers of Laos and Cambodia. The Khmer Rouge victory in Cambodia led to a killing field in which some three million Cambodians were exterminated. Paul Johnson has given a succinct, detailed and gut-wrenching account of this tragedy in his classic work Modern Times.

The Black Book of Communism, meanwhile, provides a meticulous and comprehensive account.

In just a few years after the communist takeovers in Vietnam, Laos and Cambodia, more Indochinese citizens were killed by the communists than had died on both sides in the whole Vietnam war.

H. Bruce Franklin wants us to remember the anti-war movement in America during the Vietnam War. We do remember it.

And we remember it for what it was: a shameful and shameless abomination, which saw tens of thousands of spoiled moral degenerates betray the lives and freedoms of the Indochinese people -- as they offered themselves for an association with tyranny and a complicity with evil.

> But I could be wrong. If so, let me know!

I don't anything wrong with what you wrote but you seem to think that the diode used makes no difference because you can make it up its deficiencies with an amplifier whose input impedance and gain adjusts for it. Basically that is true that you can use a less efficient diode but you will have to provide higher signal levels to it and weak signals will still be distorted due to compression. I suppose you could use a logarithmic type amplifier following the detector in order to make up for the compression.

If you look at the diode curves germanium has one of the better forward current to input voltage ratios of several diode types. Not being a radio designer my approach would be to use a diodes fairly liner region with a better forward current to input voltage ratio where the least distortion and compression would be due to it and therefor the least needed correction to be made up for by a amplifier with a fixed correction. Another reason to use a more efficient diode besides the signal level power needed is the power the diode itself burns when you bias the diodes with larger forward voltage junctions.

There used to be a Lloyd Ford dealeship on South State Street here in beautifull Jackson wayyyyyyy back in the 1940's and 1950's and 1960's.They might have been there back in the 1930's and 1920's too.Next door to them was a Buick (Fowler Buick) dealership and they had an old antique Buick car in there that had wheels on it that looked like farm wagon wheels or some kind of old carriage wheels and out on the sidewalk was an old antique gasoline pump.They kept the old antique Buick car and gasoline pump there for display purposes.y'all ought to see inside the old Southern Feeds store on Wilmington Street,it looks like an old farm museum in there.

I just checked them a bit ago and audible here on 3330 (which leads me to
believe I'm much to close to CanaDuh), 7335 and 14670.

I'm currently listening to WBCQ, 7415 which is much to close to CanaDuh as well.

> I'm hearing CHU again on 7335 khz for the first time in quite a while.

I usually get them daily on USB depending on time of day of course. They
put out enough carrier so you can detect them AM mode but your radio
will be more sensitive in SSB mode.

3330
7335
14670

Link:
<http://inms-ienm.nrc-cnrc.gc.ca/en/time_services/shortwave_broadcasts_e.
php>

Quote: "Three frequencies are used: 3330, 7335, and 14670 kHz. The
transmission mode, upper single sideband with carrier re-inserted,
provides time signal service without requiring a special SSB radio, and
also provides three standard frequencies."

That's nothing. What about all the Chinese that become citizens so they
can work for our defense contractors and then covertly copy sensitive
documents they work with to the red chinese govenrment. The Chinese
have sub, nuclear, missile, and heck even ICBM USA technology now.

Commercially, USA business capital has been flowing into China for
years and soon as their economy ramps up they won't need us anymore.

We have been doing an excellent job of helping the Chinese kick their
economy into high gear as evidenced by the plethora of jamming
transmitters I hear every day all over the short wave bands
broadcasting a loop of chinese operatic music.

Too bad the Dickster isn't the only one with a bad memory.

Brown and Root had the contracts to build airfields, bases and hospitals
in South Vietnam.

From "The Man Who Ran the Moon" (biography of James Webb, head of
NASA), by Piers Bizony, p. 49:

"In August 1966 a certain young Republican senator from Illinois was
outspokenly critical of this cronyism [with Brown and Root]. 'Why such a
huge contract has not been, and is not now being, adequately audited is
beyond me. The potential for waste and profiteering is substantial'. In
1967 the General Accounting Office identified massive financial
improprieties, and disappearences of huge amounts of its war materiel.
American GIs in Vietnam nicknamed the company Burn & Loot. By the dawn
of the 21st century it [Brown & Root] had become part of the Halliburton
group, and Donald Rumsfeld from Illinois was no longer so critical of
its construction projects in theaters of war."

So, the Dickster AND Rummy both sold their souls to the Devil.

I doubt if China could maintain a growing industry and prosperity without building and exporting Chinese made products to other Countries around the World.Most of the Chinese people in China are desperately poor and live in shacks with hardly more than the bare necessities and often,not even that.If China wasen't exporting now,they would be back in the dark ages.Do y'all remember nixon standing on the Great Wall of China? And Japan's economy after World War Two,,,, America helped Japan build new factories in Japan that were better than factories in America. cuhulin

I don't know who made the transmitters, just that their are plenty of
them.

Dear Kim,

Frankly, the Mini CCRadio, as projected, was just a "me-too" radio, offering nothing new to the purchaser. I wrote to C. Crane about this - after all, if a new radio is being designed and is to be sold for $150.00, it ought to offer, among its features, HD-Radio (IBOC), certainly, at least, on FM (and probably AM too), whether or not some people want or like this new form of broadcasting (personally I see no need for it!).

In addition, I think a newly designed "long-range" AM radio should definitely feature a good synchronous detection circuit. I realize that there are some few people who say they do not care for this circuit (frankly, it is my belief that they do not know how to properly use it or have not experienced a good one) but, even if that is the case, the circuit can always be turned off.

$150.00 is a lot of money for a radio which features no new design features. So, unless C. Crane rethinks this entire project (and obtains the services of a good radio designer), it is my opinion that this discontinuance is no loss whatsoever. After all, we have the Sony ICF-SW7600GR in the $150.00 range and the GE Superadio III in the $40.00 range and these two radios (and, of course, there are some others) should easily suit the vast majority of long-distance AM listeners who do not or cannot buy a true communications receiver or who (just) want a portable radio for MW DXing.

I must also say, in conclusion, that, in my opinion, the original CCRadio and (I should presume) the CCRadio Plus (I have no experience with that model but I understand overall performance is the same) are disappointments. Not only do they not receive any better than the GE Superadios (they often receive less well!) their construction quality leaves much to be desired. They are not even as well-made as the GE SRs and though that model is not the paragon of construction quality, it costs only $40.00 not $150.00!

As always, the above is my opinion only.

Best,

Joe

Hello All.

This is sad. Several years ago, when I was in the market for a good tabletop communications receiver, I investigated this model. It was unfortunate that, though it appeared to have a great deal of promise, Ten-tec never really followed through with support, "software" (operating) improvements, etc. (I bought, as many of you know, an AOR AR7030 Plus.)

To answer another message on this post, while the radio could be controlled by computer (as can my AOR), it is, in fact, a stand-alone (traditional) tabletop radio.

Even as it was, however, it was, at least according to virtually all the reviews I read, a good radio and I know there are many owners who are very happy with their 350s. This is a sad day for all SW listeners.

In my opinion, should one wish to have a modern, well-designed, shortwave communications receiver, of which there are fewer and fewer choices, the time to buy is now. Sacrifice what you will - lunches, movies, cable-TV, clothes and jewelry for your wife (better have pre-paid funeral arrangements if you go that route!), whatever - and buy any one of these top-quality receivers (and I do NOT mean some "used" eBay wonder!). You won't regret it.

Best,

Joe

The people who post that sync is overrated are either Trolling or don't
know what they are talking about.

The Sony 7600G and 7600GR are tough acts to follow.

< Snip >

Another problem with smaller AMBCB radios is the ferrite antenna has to be smaller with less gain. A new design radio for AM should have sync detection and I guess the HD capability if the standard survives in its current form.

Yeah that's to bad. This was a consumer priced DSP radio. I know they
were late with the software upgrades but I think people that bought the
radio were finally happy with it.

As seen on the NBC national news (July 29):

This will be the laziest Congress since 1948. The story told how the congress critters fly in on Tuesday afternoon, do their voting on Wednesday, then fly home on Thursday. This year, they will work a total of 76 (yes, that's seventy-six) days. Oh, and by the way, the absolutely -lowest- paid congress critter gets an annual salary of $165,200. The American sheeple should be up in arms about this.

Cuhulin is right---ALL politicians are crooks!

Anyone got a spare horsewhip? Tar and feathers?

> choices,

Joe, you're right--there are fewer and fewer choices--and on that basis,
now might be the time to buy.

On the other hand, we have to ask the obvious question: WHY are there
fewer and fewer choices?

At least two obvious answers come to mind:

1)The manufacturers see fewer buyers for their products.

2) Maybe the -manufacturers- view short wave as, if not dying, at least
tapering off, with less to listen to and therefore fewer potential buyers.

If the market was there, one would think the manufacturers would be
there to satisfy the demand.

Is the hand writing on the wall?

From what I hear, the problem is that Ten-Tec never sold enough of them (RX-350) to make any money. It may be that Drake, Ten-Tec, Kenwood, NRD and others no longer see a viable market in high end receivers.

> the diode used makes no difference because you can make it up its
> deficiencies with an amplifier whose input impedance and gain adjusts
> for it.

I don't think we disagree on anything important, but I wanted to say that, after a point, it won't make any practical difference to the distortion of the detector if a diode has a linear region or a very non linear square law region. The resistance of the load soon dominates the characteristiscs of the circuit.

The rest of my reply was mostly aimed at the original article's contention that a diodes distortion level can be derived from only from a diode's presumed square law characteristics and the modulation index.

>Basically that is true that you can use a less efficient diode
> but you will have to provide higher signal levels to it and weak
> signals will still be distorted due to compression. I suppose you could
> use a logarithmic type amplifier following the detector in order to make
> up for the compression.

I suppose, but I don't see any need. The distortion of the diode detector can be quite low if it's driven at a proper level to minimize the the amount of the waveform in the non linear region of the detector.

>
> If you look at the diode curves germanium has one of the better forward
> current to input voltage ratios of several diode types.

Right. A germanium diode would generally give less distortion and better sensitivity than a silicon diode. More than that, there used to be a bunch of specialized germanium diodes intended for radio audio detection, video detection and such. It seems now it's 1N34A types.

> Not being a

"Border Radio" -by- Gene Fowler and Bill Crawford
(Limelight, 1990) is a detailed and amusing history
of the snake oil salesmen, radio preachers, and
rollicking disc jockeys who worked south of the border
on powerful AM stations, beaming their English-language
signals north with programming illegal in the US.

NOTE - National Public Radio (NPR) is proposing
a merger with Public Radio International (PRI)
http://www.bizjournals.com/washington/stories/1998/01/12/story4.html
Both 'non-profit' organizations receive federal funds
indirectly through the Corporation for Public Broad-
casting (CPB), which gives 'public' Radio Stations
money to buy programming.

4800. End Fed Shortwave Listening (SWL) Antenna Reccomendations ?

Newsgroup: rec.radio.shortwave
Date: 2006-07-30 07:31:03 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1154244663.845054.105490@75g2000cwc.googlegroups.com>
Source record: 85986

- Lisa Simpson wrote:
- Finally got my antenna mast erected today, and am now on
- the prowl for an end fed shortwave antenna to attach to it,
- and am soliciting recommendations please . . .

LS,

1 - My choice for simple and easy would be the Par Electronics
End-Fed Shortwave Listening (EF-SWL) Antenna.
http://www.monitoringtimes.com/html/mt2003reviews.html
http://www.parelectronics.com/swl_end.htm
http://www.eham.net/reviews/detail/3707
http://www.grove-ent.com/ANT8.html
http://www.universal-radio.com/catalog/sw_ant/2205.html

Rig {Set-Up} the 45 Foot Wire Antenna Element as a
15 Foot Vertical-Up-Leg by 30 Foot Horizontal-Out-Arm
configured as an Inverted "L" {Low Noise} Antenna using
a Coax Cable feed-in-line and remote Ground Rod.

The Par EF-SWL uses a Wire Antenna Element that is
14 AWG "Flex-Weave" Insulated Wire that is made up
of 168 Strands of #36 Gauge Copper Wire.

Gives good all-around Shortwave Band reception and
works well on the AM/MW Band Antenna too.

Note - More of RHF's posts here on RRS about the Par
Electronics EF-SWL Antenna => http://tinyurl.com/s8yua

2 - Another 'alternative' would be one of these RF Junkie
Matching Transformers with a Shortwave Listening (SWL)
Antenna of your own making :

I heard it today. Interesting, but I think they overplay the importance
of the border stations. I wasn't on the left coast for Wolfman Jack in
his heyday, but you would think the whole rock and roll biz depended on
him from listening to the that show.

Often musical trends start in clubs long before the recording companies
get in the picture.

I was out west when Wolfman was in his hayday.. and I can say that he was quite instrumental in bringing rock and roll to much of the western US, far beyond the 'local' reach of the stations he worked at. There was much of rock and roll that was never played on stations in places like Idaho, Utah, Nevada, Arizona and New Mexico, because of the very conservative nature of these states. Though my listening to Wolfman and his contemporaries on border radio didn't start till I was 13 in 1968, they were still a significant influence in those areas. At that time, stations in Salt Lake City were still playing 'cleaned up' versions of top chart songs like Lou Christie's "Lighting Strikes" and "Rhapsody in the Rain", and not playing some of the chart records at all. We turned to the border blasters to hear the stuff our locals weren't giving us.

Long before he was in L. A., the Wolfman broadcast out of Del Rio,
Texas late at night on 1570. I remember him from the early '60s and
it was just plain creepy.

''Stan's Record Shop, 728 Texas Street, Shreveport, Louisiana'' was
his sponsor.

Well

We could have Marvin The Paranoid Android do a review for us about the dismal state of Shortwave..

" Full of Bible Beaters and Nuts..

Nothing remotly pallatable forthcoming in new receivers..

BBC has left us, abandoning its huge mass of

Program Listeners to dwell on static..

furthuremore, Matter is disintegrating..

And Jesus Christ, mascaradiong as A California State Trooper

pulls Mel Gibson over,

Only to hear a Litany of Curses

Not a word about all this on Shortwave..

" I think you ought to know I'm feeling very depressed by the whole situation.."

Given the influx of inexpensive Chinese portables in recent years, I
wouldn't be surprised if shortwave is experiencing some kind of
resurgence. However, even if it is, it'll probably be a few years
before that translates into renewed demand in the high-end portable and

tabletop markets.

That may be the case. I never had the sense that the RX-350 was a big seller. Ten-Tec certainly seems to be selling plenty of the RX-320D, and I've been tempted to buy one of those little gems myself. And of course Ten-Tec still sells the RX-340. It's their mid-range receiver that they're dropping--and of course we're just *assuming* that they're dropping it, rather than retiring it to make room for a successor.

4812. News From Burr

Newsgroup: rec.radio.shortwave
Date: 2006-07-30 13:54:35 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <44CCBA1B.1E9A9D5E@milestones.com>
Source record: 85848

Sorry for the way this looks, but that's the way it came)

Our News Letter for July,
Another happy â□□wetï¿½? month in the Philippines, it has rained very hard night and
day for the last four weeks, we have had typhoons running north of us out to sea

but the rain bands have been passing over us in waves of rain. Everything is wet,
the walls the van and us. Today we had five hours of sun shine, opened the house up
and aired it out, sure feels nice! Itâ□□s raining again, hard! There is a big storm
that may go right over us next week unless it turns.
We now have two wonderful little dogs, Ralf the Japanese Spitz and Blackie the
Miniature Pinscher. We tried to keep a Basset Hound but it just didnâ□□t work (The
Rude French). We have had Ralf for a year but just got Blackie this week. We have a
well guarded house with lots of noise. We have built a great friendship with a
local veterinarian. He is becoming a good friend; his wife is a nurse (RN)
We two retirees try to get up by 7 or so everyday then we sit on the porch and
drink our morning pot of coffee before we rush in the kitchen for our late
breakfast. Over breakfast we try to decide what we are going to do with the rest of
the day. We like to ride out to a mall about 12 miles north and have lunch while

watching crowds of people climbing over each other trying get their shopping done
at lunch time (we always try to get a table right in the way of the kids)!
I find lots of little things to do around here some days if I look, I donâ□□t look
too hard! I have been rebuilding little things around the house or maybe I should
say I have been watching other people rebuild little things around the house. Last
week I had the outside of the out side fence glazed over so week can â□□haveï¿½? it
painted. Today I bought hollow brick and cement to line our outside flower box in
front of the house; they start on that next week. Iâ□□ll try to find time to take

pictures of the house so I can send you copies.
Nonetâ□□s big project are drapes, she is making new drapes for the house with a foot-pump sawing machines. She is so happy and proud of her drapes, she just sparkles!!!! Each room is getting a different set, color and with matching sheets in the bedrooms.
I am thinking of getting into â□□Racing Pigeonsï¿½?. I have researched racing pigeons for three weeks on the net and have a ream of information. I have my plans for a

little loft and will start with two sets of sitting birds. The doc will give me a set of new 21 day old birds so I can start flying sooner. It takes seven months to have a pigeon ready to race. The only drew back is that I will have to be here full time to take care of them. Iâ□□m not sure I want to tie myself down yet; maybe I

should wait until I am ready to slow down before starting this project.
We are also looking for property on the beach either here on Luzon or on Palawan

where we can build a nice bamboo house and spend our days being â□□Beach Bumsï¿½?, an honorable profession. We have been down to Palawan and looked around, it sure is

nice down there and something to think about. Nonet has family down there, nice people. We are going to try to make a few trips up to the north area of Luzon and see if we can find something we like up there. If we stayed on this island then we would have the international airport, shopping in Manila and where Nonetâ□□s friends from the bank are.
I have thought about backing a few small businesses but donâ□□t think I want to get involved in the taxes and politics that go with it. I have given a lot of thought to Cyber-Cafes, seems like this would be a nice thing to get into just for something to do BUT, it would have to be a very good deal for me to mess with it because I just donâ□□t need it.
I still feel bad three days a week when I should be lifting and the other three days when I should be riding my bike. I feel great the other day because all we have to do is go to chURch. Each day I tell myself that I am going to workout but for some reason I just donâ□□t get â□□aroundtoitï¿½?. I guess I should feel good that I still

have it as a â□□roundtoitï¿½? and so help me I am going to do it starting next
Monday, I think well maybe if I remember!!!

OK my friends, I hope this brings you up to date on the life and times of the
happy
retirees. Iâ□□ll try to find time to send out a few pictures and do another nice

newsy newsletter next month.
Thanks for being our friends and feel free to visit anytime, we have a
spare
bedroom with air-conditioning. The plane arrives every morning about 10, another

thing we like to do is watch the plane come in and see whoâ□□s on it.

Take Care,

Burr & Nonet

I use this to make short recordings. If you have a microphone that connects to your computer, it's easy, and won't cost you anything.

I'm always wishing that more folks would post links to audio recordings. It's nice to hear what various stations sound like from another person's shack, with another person's gear, etc. A recording is worth a thousand words.

Mr. Lankford's main concept is that by using a narrow enough IF filter,
a narrow filter with with a step attenuation skirt, and by offset
tunning to
only get the carrier and the desired sideband, and with a following
suitable AF LP fitler can do wonders. It is not magic, and doesn't work

with every receiver and under every condition. In the ret of this, and
all
future posts, I will simply call it "ELPAF".

I can say is that it is a usefull technique, and will even help when
used
premium receiver like an AOR7030 or R390, the filter can really reduce
the effects of "fading". With a modest receiver like the R2000 that has

been upgraded with a suitablely narrow IF filter, the results are
impressive.
With a "marginal" receiver like the ATS909/DX398 the results are
nothing
short of amazing.

I used a similar technique with my R-390A. I'd tune one side of the
carrier and use the BFO to provide a local one. You have to back way
off on the RF gain as the 390A BFO is sort of weak.

Almost sounds like the 'syncho-phase' detector on the R7/A. Use of a narrower filter and tilting the passband control to either USB/LSB.

Sorry for being such a RX newbie here. I guess I shoulda stayed awake more during signals class. My expertise is very large switching and resonant power supplies and transmitters.

So the multipath distortion causes fading of the carrier only?? This makes some sense to me. A small set of the lower sideband frequencies would also cause phase cancellation, but since the audio spectrum is moving around so fast no one notices. I think I'm on the right track here. So use another carrier slaved to the received carrier and you get better reception during fade. Even if it wanders a few cycles during fade you probably don't hear anyway. I guess that is how a sync detector works.

I Imagine it would be a chore to build a sync detector from the ground up, but I would also think it must have already been put into an ic chip, no???

I like the link R2000swl posted to AmWindow for the precision full-wave rectifier. I think I'll stick it on a pc board and give it a try. If anybody wants a board let me know. They are very inexpensive.

bm, or anyone else, if you have good link to ELPAF or alternative RX circuits then maybe I could throw that down on same board if not too much room.

Details of board size at www.expresspcb.com I do the small one double side and no silkscreen 3 boiards 60bucks.

You can contact me off board at yzordderrex@verizon.net

One Western journalist spent days scouring the south Lebanese port city of Tyre and the surrounding villages for a sign of the militants who triggered the Israeli assault, but came up empty.

Then, two men showed up at his seafront hotel. He had asked too many questions, they said. He would have to return to Beirut. The journalist in question asked not to be identified fearing Hezbollah retaliation.

"This is their counter intelligence. They have a very effective local networks who report every thing that is going on," says Goksel, the former UN advisor.

An ice cream vendor in downtown Tyre simply shrugs his shoulders when asked about the shadowy organization. He knows they are around, he says, but no one knows where.

"Even during peaceful times we never see them anywhere," says Ali Mohammed, 56. "They are a part of the people. We don't know who is Hezbollah and who is not. It could be you or me."

Dear Sir,

I tghink the problem is complicated and not easily addressed. The BBC and some other international broadcasters evidently feel that shortwave is "done" and they are moving onto "other" means of delivery. Yet the "religious" broadcasters appear to be increasing their shortwave presence and they depend upon listeners to send them financial support. Would they increase their shortwave presence if they were not seeing results?

In my opinion, the shortwave equipment quandary is the same as the high-fidelity equipment one - the mass audience seems to be happy with "lo-fi" sound from their CDs and iPods and they "ooh and ah" when they hear good sound but then they do nothing about their own sad situation. To be frank, most of today's music is trash anyway, in my opinion, and the "multi-channel" "synthesized" sound (which could never be actually performed live) is not high fidelity in the first place, so it just doesn't matter how it's recorded or played back. The audience for better music (classical, jazz, Broadway shows, etc.) is small and the recording companies have little interest in other than a mass audience. And it appears that good sound reproducing apparatus is low on the mass audiences' list of priorities. (It is out there, of course, and well-worth seeking out.)

The same applies to the big international broadcasters (as well as the radio manufacturers) - they have NO IDEA (they have NEVER had any idea) of the size of their shortwave audience so they assume that since "everybody" has a computer, "nobody" listens to shortwave any more and "everybody" listens on their computers (or on their local "educational" FM outlets)!

Well, I for one, do NOT listen on my computer (and I can't stand NPR for the most part - I can''t stand the idiotic "conservative" talk-shows either) and those stations which have abandoned the shortwaves are just not heard by me (one example is Switzerland).

I can presume that the manufacturing end "thoughts" are the same as the high-end hi-fi one - "everybody" buys "only" portables so why bother to manufacture a high quality tabletop unit, notwithstanding that, once properly designed, the units can be marketed for many years without change, thus amortizing the initial design costs. (The AOR AR7030, for example, has been manufactured for over ten years now and, though the factory does improve the design as problems and./or solutions become apparent - they are VERY responsive that way - their design costs have been minimal in recent years.) Part of the reason that radios may be discontinued is that a needed part may itself have been discontinued

and therefore the set, as designed, can no longer be made. And the manufacturers, knowing that the market for expensive radios is small (and has ALWAYS been small), think that, rather than design a new highe-end radio, they can make more money making HDTVs, DVD blanks, or Condensed Soup.

Even though it's far from perfect, look at the ICOM IC-R75. It sells for about $600.00 and, even with a few modifications bringing its ultimate cost up to around $1000.00, it still sells and performs well. It would be nice if ICOM itself would make a few (much-needed) modifications, but, even without them, we have Kiwa to help improve this receiver to somewhere in the vicinity of where it ought to be. If ICOM can design and manufacture a radio to such high standards at such a relatively low price, why can't others? I do believe that such radios would indeed sell and would sell over many years.

The Chinese manufacturers evidently agree with me as they keep introducing new models and their offerings are becoming more and more sophisticated and, I hope, their quality of constructon is improving also. Even India is getting into the game with the Eton E1. There have been shortwave radios manufactured in India for many years but this is the first model of which I am aware that has been marketed in the United States.

Maybe the true fact is that some companies "get it" and others "do not." AOR is hanging in there, so is ICOM, and, most definitely, so is Eton. And CRI has been increasing its English-language schedule even while others are decreasing theirs.

And who knows - maybe, as someone else has said here, Ten-tec is planning to bring out a new, improved "mid-priced" tabletop shortwave receiver.

We can hope.

Best,

Joe

I like Total Recorder from http://www.highcriteria.com . The trial
version is free, but it periodically adds a short noise burst to the
recording. The Standard Edition is not very expensive. I don't think
that it will connect automatically to an audio stream. However, once
you are connected, it will do automated timed recordings and save them
in a variety of formats.

While this synchronous detector works quite well, there is a link
<http://home.worldnet.att.net/~wa1sov/technical/allpass/allpass.html>
to a filter that allows improved reception by "rejecting" signals other
then the desired signal. While this does improve reception, it isn't
quite as effective as some literature would suggest.

If you really interested in synch detectors, Tom Holden has an
excellent
page, <http://groups.yahoo.com/group/Synch_AM/messages> that has
some links to very good resources.

Attach a piece of wire to the center pin of a coax plug, screw the
plug onto your radio, run the wire out your window, up your mast,
across the yard, however long you want it to be.

That's a description of my 20 meter end fed wire (okay, it goes
through a tuner, but if you're not transmitting, there's no need to
use one).

You might be surprised how **little** house noise you pick up, running
a wire directly into the window, sans coax.

David Eduardo is welcome to say what he wishes. I don't NEED to hear AM IBOC (or even FM) to know that I don't like it. AM IBOC is a low bitrate stream. There's no way it can sound any good to my ears. Besides, as Steve has said over and over again: "IBOC=QRM". As an engineer, I speak with some authority that IBOC is poor engineering. Anything that causes interference to another station is poor engineering. The fact that he maintains that "nobody listens outside the local market" doesn't change the fact that people DO listen outside the local market. He has been offered anecdotal evidence time and time again by several people in this group, along with real demonstrable evidence by professionals in the radio industry that IBOC is a badly flawed system. Each time he has dismissed them out of hand, usually with some sort of comment about the poster's credibility.

I have him killfiled. I don't care what he says about me. I am very comfortable in the fact that where I am right, I am right. His arguments all seem to look only at the bottom line. Radio isn't (and can't be) only about the bottom line. No more so than any other business. Any business is about serving the customer. ALL the customers. Any business that does not do this is doomed to eventual failure.

No, a simple 2-path is effectively a comb filter with the separation
between
frequencies of constructive and destructive interference determined by
the
difference in propagation delay. With enough delay, this separation can
be
much less than the bandwidth of the desired signal, causing multiple
cancellations within the passband. The delay difference is not a
constant
due to the roiling ionosphere so the frequencies at which destructive
interference occurs and their separations are constantly changing. The
severest form of distortion is when a cancellation occurs at the
carrier
frequency but if you have ever heard of 'flanging' in the recording
industry, you'll know what the interference effect can be when a
cancellation occurs in the sidebands. It is is very noticeable.

> So use another carrier slaved to the received carrier and you

Any time you narrow the frequency range with a filter you lower the
noise floor possibly making the faded carrier large enough so the
detector does not greatly distort the audio.

I have an NRD-525 for sale. it is in very good condition and comes with:

copy of user manual
service manual on CD
note and mods on improving the 525
nice metal external speaker
some antenna wire

price is $425 plus shipping

if you read the reviews everyone rates this receiver as outstanding

Looks like computer control only. I hope that TCP/IP is an ethernet port
for at least 10 Mbit data rate instead of a slow serial port. You can
add an ethernet port to any product for $50 to $150.

That pretty much sums up her position.

Except for the threat of having my ISP (which is really the server in my
closet) cut me off because I disagree with her.

That would be the first nazi Luddite I have ever encountered.

And as an engineer, I can speak with some authority that HD is a good
engineering solution to a marketing problem.

> Anything that causes interference to another station is poor engineering.
> The fact that he maintains that "nobody listens outside the local market"
> doesn't change the fact that people DO listen outside the local market.

They do not listen in a statstically meaningful quantity, and provide no
economic benefit to stations.

> He has been offered anecdotal evidence time and time again by several
> people in this group, along with real demonstrable evidence by
> professionals in the radio industry that IBOC is a badly flawed system.

It works. It has better sond on AM than analog, better sound on FM than
analog, and adds multiple additional channels to FM.

I am also a professional, and have been for decades.

I can offer demonstrable, documented evidence (and have) that AM is ageing
and dieing. I can prove how minscule out of market listening is. All the
other compalints are based on interference to stations that are not being
listened to outside their local markets.

>Each time he has dismissed them out of hand, usually with some sort of
>comment about the poster's credibility.

Radio is a business. If we have no interference and no listeners, which is
what will happen without AM HD, who will benefit?
>

> I have him killfiled.

Ah, another ostrich. Hide, and HD will go away. Tomorrow, the first
$200,000,000 marketing campaign by the HD Alliance starts.

> I don't care what he says about me. I am very comfortable in the fact that
> where I am right, I am right. His arguments all seem to look only at the
> bottom line. Radio isn't (and can't be) only about the bottom line.

Oh, yes it is. Without a profit, no business can provide any service to the
consumer, listener, user, client, customer, patient or whatever.

> No more so than any other business. Any business is about serving the
> customer. ALL the customers. Any business that does not do this is doomed
> to eventual failure.

And right now, AM radio is losing customers like mad because analog AM
quality sucks unless you are a DXer or grew up on it.

Yeah, I missed half of the net, which was apparently jammed by some
3945 guys before I got home. Cindy Sheehan had me pinned down in bed
and wouldn't let me leave. She just loves it when I don my John Kerry
mask and give her "chin". What a squealer! Did you know her panties are
red with a hammer and sickle pattern?

Cynthia couldn't make it. She passed out at Popeye's Fried Chicken
after a day long crack binge.

Mr Conrade, despite 50 years in radio, does not understand neraly all analog
FM listening comes in the 64 dbu contour. At that point, the HD signal is
also rubust.
>>
>> 4) HD Radio: Where are the 1300 stations?:

Over 1000 on air, 1000 licenced and building (there is a backlog from
Harris, BE and Nautel) and 1000 mor ecommitted. That takes care of over 70%
of the US population.
>>
>> http://www.orbitcast.com/archives/terrestrial/hd_radio/
>>
>> 5) Radio Industry Showing Signs Of Doubt About HD

Inaccurate reporting.
>>
>> http://www.audiographics.com/agd/022006-1.htm

iBiquity is well financed, and radio has invested over $200 million just in
hardware already.

My point still holds in that nobody serious builds LCR filters for
auido (speaker crossovers exempted). His LCR filter IS in the audio
chain, not the IF.

That whole site has something to do with Harry Helms, another DXer who is
anti-radio. Much of the data is just flat wrong.

No. They still make the $300 RX-320 (it sells well) and they make the high
end RX-340 ($4K) and the RX-400 is due out soon ($6K).

Gotcha good this time, Eduardo ! BTW, looks like I have chased
autopaint-1 off the radio-intel.com site, he will be protected from all
the anti-IBOC truth, so he doesn't have to face it - the HD moderators

are all pro-IBOC - they make a final insult, then lock the thread.
See, you over there, motherfucker !

Bzzzzt! WRONG again, Sunshine! Try and pay attention.

Nothing to do with "cut and run", directly or indirectly, in my post, quoted in its -entirety- below for your RE-reading pleasure.

It was my basic observation of a simple FACT, as stated by Bush himself, nothing more, nothing less.

Dodge, dance and deflect all you want, but if, into the FOURTH year, Bush is STILL trying to "get Baghdad under control", it is obvious to most people (apparently except you), that the mission has NOT been accomplished. "Liberal" or "conservative" has nothing to do with that simple statement of fact. However, you DO have to ask what the hell we have been doing there for the last 4 years.

Any 'cut and run' is a construct of your own feeble and uncomprehending mind and has nothing at all to do with my observation of the statement Bush made.

Original post:

> George Bush is sending more troops to Baghdad to "get Baghdad under
> control".
>
> Get -Baghdad- under control (to say nothing of the rest of the
> country)? In the 4th year over there?? Mission accomplished????

Well, I see you and the fake ace have kissed and made up. Thought you were too smart to be a dxDingleberry sock puppet again. How disappointing.

P.S.

I said nothing about 'fault'; however, seeing as -you- brought it up, tell us then, whose fault you think it is that after almost 4 years, Baghdad is -still- not under control.

I believe Bush is the "Commander-in-Chief", that the buck was supposed to stop with him and that he made the BIG show (eyewash for the sheeple?) of saying "mission accomplished".

Sorry, but after this amount of time and the fact that Baghdad is -still- out of control by Bush's own defacto admission , I am contending that the mission is NOT accomplished.

Based on extensive studies of Arbitron diary returns, 95% of all listening (quarter hours) happens in the 64 dbu contour, however it is measured. The fact is, outside that contour, there is little listening.

And happy trails to you, p'odner.

You think that you have won by posting a website hosted by Harry Helms, with data that is out of date, untruthful and unsubstantiated (including out of context quotes, inaccurate financial data, etc.) means you have "Won?" All it means is that you found another ignorant fellow-traveler.

Message-ID: <b5vqc25kmti2d9n71nb6ptjtsavij52kmt@4ax.com>
Source record: 85999

In the past, I have owned a couple of Drake 7-Line receivers (including the 4245 along with a Sherwood SE3)), but I have never enjoyed a receiver as much as my RX-350. While it's sync detector for shortwave broadcast is pretty badly implemented, it's incredibly stable and quiet. Instead of using it's sync detector, I simply employ ECSS (turn on USB or LSB mode) techniques. The results, using ECSS and the infinitely variable bandwidth controls on both AM and SSB are pretty amazing. Excellent fidelity, stability, and unsurpassed ability to cut out adjacent channel interference. I have enjoyed more broadcast DX from this receiver due to its stability and quietness than from any other including the 4245 with a full boat of filters.

Despite what Passport says, I would highly recommend this receiver for its stability, fidelity, DRM ability (if you're into that -- it is directly interfacable), and ability to reject interference (I live about a block away from several commercial FM stations and have never been disturbed when using the RX-350).

Bad things about the RX-350 (mostly due to TenTec's rotten service and support):

1) TenTec's support has sucked big time. The sync detection could have been easily fixed in software, but they just didn't seem to care enough to have had any updates for the past 4 years or so.

2) LCD display fades into black splotches when heated up. TenTec's rotten "American" service department wanted to charge me for fixing this under warranty. It was difficult to find anyone at TenTec who even understood the problem that I was having.

In conclusion, I love the receiver, but TenTec will never get any of my future business due to their rotten support.

I bought it from a fellow who described it as "in like new" condition.
The top was only fair. I added the bottom with the metal bail because
it's SOOOO much better. The front was touched up with magic marker and
had some scratches. So I got the top and bottom from Drake. I got the
R8E front panel on Ebay. I wanted it to be as close to new as I could
get it. The old guy I got it from said he has eye problems :) He did
reimburse me $50.

> I see. When it is correctly pointed out to you that your intellectual
> superiors consider your blatherings to be a waste of oxygen, you attack
the
> messenger rather than the facts presented.
when you falsely claim I have intelectual superoirs in posting in the
NG you cease to be a messenger and become a libeler, let alone go on
about wasting O2

...
Prove that there are those of us who are NOT your intellectual superior. By
which yardstick are you going to measure or determine this? By the very
simple fact that we post correctly, use good grammar and don't splatter our
posts with misspelled words is example enough.

...
thee are those that consider my efforts a waste. I would conceed that
they ight have point if the facts were clearly to the contary
you presented no facts you just repeat more libel
...
I repeated nothing. I made a statement based upon my observations. There is
no libel involved.
...

here are some facts

Fact: I set out to stop what has been K4YZ multi year effort to libel
everyone he is seriously oposed to. I have achived that goal.
...
Fact: You "saw" Steve in post after post that were not his. You falsely
accused Steve of making anon posts when he, in fact, did no such thing when
you yourself were accused of the same. How many email addresses and sock
puppets do you need? Steve has one...his REAL name and callsign.
...

Fact: I decided to resist the effort of many folks to use an accusation
of Homosexaulity as weapon in these NG's. I have not been entirely
succesfull to date OTOH most posters have come to the point of noting
"so what?" (or words to that effect) in response to such efforts, thus
I am satfied with the results
...
The accusations you refer to were mostly posts made by Wiseman in his
attempt to anger you after your forty to fifty posts per day. Wiseman is no
intellectual giant but you went way past the typical boundaries and even
went so far as to follow Wiseman to the Nim Busters boards where you further

antagonized him. Last I heard, Mark, the Admin banned you from the Nim Boards and to be banned from that group of misfits takes some bit of doing.
....

Fact:in resisting the effort of various folks to label tech and NoCoders as incapple Ham I believe the way such trolls as "slow code" and Al klein quiting the feild have shown that my point is made.
...
This is a moot point. If you were so easily offended by comments aimed toward No-Coders, the problem is yours. Had you any intellect you would have ignored the posts, but you couldn't leave well-enough alone. You just HAD to stick your nose in.
...

Fact: in persuing justice for all (even Wismen as I try to restrain those tat feel the need to enhance his records of sin further) I have prefromed a Mitvah
...
Fact: You are not "persuing" justice for all. You are taking every opportunity to spam, irritate, and inject inane comments where none are due. You have performed nothing other than flooding the newsgroups with one-liners that make little to no sense.
...

The price I have paid for this is what? Making it more obvious (not that it was ever a secert) that I suffer from dyslexia and aphasia which make my words esp with typed with passion (or boredom as is often the case in hauling out Wisemen trash) an adventureto say the least to read. For you I supose this would be mortifing to me it is indeed something I had to get used too by the 3rd or 4th grade
...
That, Mark, is an excuse. There are many of your peers who have overcome what you claim to be an affliction. You could do likewise, were you not so lazy. I have no pity for you or your excuses.
...

you may make of my typos all you like it hardly bothers me (msotly it bothers me when the mispeeling at point near the heart of the peice of writing is seized upon to avoid the point itself but even that makes my oint in many cases
...
If my "corrections" regarding your poor spelling didn't bother you, you would have not made the above comment. If you want to make a point, and make it intelligently, then take the time to do it correctly. Your compositions are akin to those that a second-grader would create. You can hardly expect your "points" to be taken seriously when you cannot present them in a format that the majority of us can understand. You are at fault here, Mark. Not the rest of us who speak English.
...

you are a cowwrd and clearly without honor
...

Was that supposed to cut to the core of my being? Upset me? Send me crying? To the contrary, Mark, your words, misspelled as they are, are meaningless. As I've said in the past, I look at you as a bouncy-ball toy to be slapped around much as a cat would do with a mouse. You are entertainment, Mark. A diversion. A nonentity. I respond to you for two reasons. First, I am bored. Secondly, you are so easy to bounce around that I find you mildly amusing and a soft target to boot.

Now let me see how you will twist this. Did I "libbel" you by referring to you as a soft target? Did I comport myself as being the Antichrist by using "666"? It will be interesting to see how you will surely misinterpret my commentary.

Lecture me not about honor, Mark. You, of all people, know not the meaning of the word.

Well, they HAVE surrendered pretty much all their duties to the Pres.
The will of Bush is law, and a bill is not law unless Bush Caesar wills
it.

Let them all be trampled by drunken elephants.

Hudley Pearse

Hey asshole - it is dated June 2006 - that is HARDLY out-of-date - so,
fuck you old man !

It will never catch on. There are about 200 million car radios
out there who can't rx the digital signal and you would be hard
pressed to find 1000 people who would toss their car radios
just to be able to get the IB signal. Just like Siruis and XM
this to is destined for the scrap heap in a Year's or 2's time at best.

Most of the data is dated April, which is an eternity in something as fast moving as HD. And much of the "reporting" has no verification at all, such as the bit on iBiquity supposedly being in financial trouble. The fact is, they just signed a joint venture deal with Intel (Heard of them?) for further chipset development, including an infusion of Intel capital.

Most of that stuff is either BD pontification or lies.

Not when the other party is a mere troll.

If you hadn't gotten caught using aliases and fake resumes, you might
have pulled it off. But because you did get caught, you are now BUSTED.

First, less than a third of radio listening is done in the car. Second, new cars are sold every year, and there are aftermarket radios and add-ons that will eventually contribute to the penetration of HD, especially since the HD2 channels are free and can only be had with an HD radio.

You are easily amused if a miss-print by the NAB sends you into paroxysms of
laughter. (I never was President of Programming as such a position does not
exist in my company or any other).

This is a nice time-killer or filler. Currently, I am sitting at an airport at around 6 AM waiting to go visit a station... and this is more amusing than the LA Times (watching planes land is more amusing than that).

I am also a seasoned DXer (2200 stations confirmed, 50 states, 87 countries, on MW) and find it interesting that the symbiotic relationship of radio stations and DXers is now a position of hostility because some DXers seem to think AM (on ME or SW) will go on forever just for them. The fact is, AM is dieing and only something like HD can possibly save it (no guarantee) yet DXers find it abhorrent that we should try.

XM stock is off 60% in the last 18 months, as investment analysts project slower growth. Satellite represents less than 0.5% of radio listening now, and would have to get near 20 million subscribers just to represent a 1 share of national listening... that is at least 3 years away.

4943. Another Dallas Lankford article on synch detectors

I had wondered how DL managed to do the tests I have mentioned.
I followed some not, to me, obvious links and found this lihnk:
<http://members.cox.net/dallaslankford/High_Performance_RF_Notch_Filter.pdf>
I hope to assemble one and do some testing of my equipment.

Drake used an RF notch filter in the R7/A and if I recall also in some if not all of their earlier amateur receivers.

Unfortunately they did not incorporate it into the R8 series of receivers.

In my opinion, RF notching is the preferred way to go, as it helps to eliminate the offending signal from affecting the AGC adversely.

Where did it move to? As I recall it was a 13xx frequency.

If you know what it is, maybe I can pick it up here. I used to tune WCKY in the evenings on ocassion for a good laugh.

The latest Arbitrons came out locally, and lo and behold,
the #1 station in Cincy is WLW-AM.

http://frontier.cincinnati.com/blogs/tv/2006/07/radio-ratings-are-in.asp

Ace, this explains why Air America got moved off 1530 WCKY,
it tanked in the ratings. And I mean tanked.

DL's notch filter is designed to simulate fading. I will admit that I
hadn't even
considered trying to add one to my setup. I was only thinking of trying
to do
some tests to see how well my various detectors would cope with fading.

Thanks for widening my outlook!

1360. Good luck on picking it up; it's actually a shame
that Homer moved off of 1360 for 1530; the sports
format on 1360 has been one of the most stable
periods of 1360's history.

Bullshit. There will be 20 MM listeners in under a year. Each sub
represents more than 1 listener. Price per share is not the
Arbitrons.

Your dismissive attitude toward the exurban audience is symtomatic of
the dinosaur radio business in general. Y'all are a bunch of
assholes. It's conveyed in the programming.

For your information, my neighborhood is full of satellite radio
subscribers.

Brenda isn't very nice either. I went to her house once to look at her shortwave radio's. I was explaining to her about differences in quality between different makes, models, manufacturers, and plastic. I must have said something she didn't like because she farted in her hand and put it right by my nose. I never smelled anything so bad in all my life. I'm never going back to her house again.

Uhh. I believe that when Brenda means "Killfile" it means she's got
your posts blocked, so she doesn't see anything you post, (unless fool
clowns like me quote something you say ;)).

I know Brenda. Personally. Going after people's ISP accounts is NOT
her style.

Hi Glenn, These new frequencies just in from Mark Deutsch of
BBC-WS. Can you
use them? Cheers (George Poppin, San Francisco, July 31,
DX LISTENING DIGEST)

You bet we can! However, 11675 and 5975 are not new, and
the hours are still
much too limited. Apparently means 11865 at 11-13, and
15390 at 21-22 are
replaced? (Glenn Hauser, DX LISTENING DIGEST) Viz.:

Hi George, Thanks as always for the report. It's always useful
to know what can
be heard there, especially as so little is actually going your
way. You'll
notice changes in our remaining Americas coverage from
tomorrow - we've been
concerned in particular that parts of Caribbean were poorly
served. But I fear
that (for that very reason) you may not hear much of this in
California.

6130 1100-1200 from Montsinï¿½ry
9750 1200-1300 from Montsinï¿½ry
9660 1100-1300 from Cypress Creek (SC)
11675 2100-2200 from Greenville
5975 2200-2300 from Montsinï¿½ry
13765 2100-2300 from Cypress Creek (SC)

Best wishes from London, (Mark Deutsch, BBCWS London via

Dear friends,

Here are the frequencies dropped/not heard of AIR in
connection with my last email attached below:

7270 100 kW Chennai 0700-1330 1430-1740 (AIR FM Gold)
7275 100 kW Chennai 0025-0430 (AIR FM Gold)
7360 100 kW Delhi (Kingsway) 0700-1330 (AIR FM Gold)
9820 250 kW Panaji 1300-1500 Sinhala (Sri Lanka)

My dad and step mom just bought a new Honda Element with XM radio.
They weren't interested in IBOC, and the dealer couldn't talk them into
it. If a car salesman can't sell something. it says a lot.

Maybe all this is meaningful only when referring to really high-end
receivers. All I know is that I sometimes hear annoying distortion
when listening to a reasonable-strength SWBC station, and hitting
the "Sync" button on the Grundig 800 or the Sony 2010 makes it
stop. That increases my listening enjoyment. What more can I ask of it?

I am surprised they offered it. The real rollout of HD is just starting
today! Of course, the XM for my car was offered at more than that, plus $150
a year.

Several weeks ago, she said she was going to complain to my ISP and get me
denied service. She was very specific, and the message is filed.

FYI
Thanks to the acquisition of ALLISS antennae made by the French company
Thal&#65533;s, the Chinese authorities have improved their jamming capabilities.
With the help of French company Thal&#65533;s, ALLISS aerials were set up in every
corner of the country to block foreign radio waves.

>
> Old news.

Not several decades. It only returned to the
top five in the 80's after foundering under
poor management in the 70's. There used to
be articles praising Randy Michels' management
in the late 80's under Jaycor and pointed to
his work with Q-102 (WKRQ) and then with
WLW and WEBN as proof of his acumen.

So much for poor AM quality keeping listeners
away.

> > Ace, this explains why Air America got moved off 1530 WCKY,
> > it tanked in the ratings. And I mean tanked.
>

The article, if you cared to read it, mentioned that 1530
tanked in the ratings so badly that Dayton and Middletown
stations were ranked ahead of it, and the format that
AA replaced, the oldies format that Dusty Rhodes took
with him to a miniscule station, scored double the ratings
than AA did.

That was why AA and Homer switched.

I've done (as in been paid for) filter design in telecom/datacom
applications, including elliptic filters, delay equalizers, etc. I know
of what I speak.

There is a leapfrog design on this page if you want to educate
yourself:
http://www.filter-solutions.com/active.html

Maybe someone posing as her? It's not unheard of. I've had people
tell me that they've received viruses and attacks from who knows who
using my email address. But everything is clean.

It's easy to spoof email addresses, I think.

Dear Bob,

If you DX on the MW at all you have surely experienced
selectable-sideband distortion (where the sideband[s] is/are received
"out-of-phase" with the carrier). Around sundown, all night, and up to
a bit after sunup, you will be receiving both skywave and groundwave on
many MW broadcasts, especially those from more than, say, fifty miles
away.

That is what a good sync detector circuit will improve. Do any of your
receivers feature this circuit? Have you ever tried it on MW in the
evening or at night? There is a BIG difference in the quality of the
received MW (AM below 1700 kHz) signal with the sync in use.

Best,

Joe

I almost thought it was a cassette player slot, you know like they have
on car radios. But then I remembered the size of the radio....and said
.... NAHHHH.

I wonder what happened to the prototypes. Would be interesting to get
one just for collection's sake.

I own several receivers, R2000, R390, R392 and a DX398. I currently have a AOR7030+. From some experiments last summer to the present I found that the "standard", and all too common, diode detector wasn't the best choice for detection. In my quest for a better detector I found many non obvious "things" can mess up intelligibility. I built a micro power transmitter, with a high quality modulator, driven by a MP3 player that loops a random set of words that can be easily confussed. Copy/Coffee etc.

By reducing the transmitter power level to the minimum level where I could achive 80% intelligibility I was pleasantly shocked to find that by using better detectors I could drop the power from the transmitter by up to ~12dB. The major weakness was, while my signal is far enough away to insure my dB readings are reasonably accurate, I could only deal with QRM/QRN impossed on top of my test signal, I couldn't duplicate or even simulate the deep fades caused by multipath.

I went to considerable trouble to design, test and redesign an outboard detector complete with better IF filters.

I was somewhat satisified with the results, but I had been lead to believe that a synch detector was an almost magical device that could eliminate or reduce the unintelligibility caused by bad selective

fading. DL's experiments and observations showed me that perhaps I had mad false assumptions.

At the time when I started I had the AOR for a couple of weeks and did not have time to completly evaluate the AMSD capacity to moderate the effects of deep fades.

Since our friend had to ship her AOR back to England for repair, and since she now is living in New Zealand, she had it shipped to me for a "check out". I have had enough experience with my AMSD to be able to appreciate the AOR a little better. While it is not perfect I would gladly give my left nu, er left foot for one.

But an AMSD is not a cure all. The better filters, better audio etc make the AOR a joy to use. The multi-level control scheme makes it a royal PITA! But even the AOR showed clear benifit from DLs ELPAF. For a more pedestrian receiver like the R2000, a better detector, see my posts for links, with a better audio chain, better IF filter and the DL ELPAF my R2000 can dig out >99% of what the AOR receives. True the AOR 7030+ has a much better choice of filters(drool drool), and the audio chain is quiter then anything I have
been able to yet build, but for less then 50$, I am a good scrounger and love to trade, I have improved my R2000 significantly.

And we use a DX398 for mini DXpeditions and with a tighter IF filter and
an add on DL ELPAF the radio is many times better then a stock version.

I bought a used DX-398, some what scuffed but I paid $5 at a local "Good
Will" thrift store, and plan on adding a simple "improved AM detector", with
a better(tighter) IF filter and see if the work is worth the effort.

One thing to keep in mind is that Dallas Lankford is a serious MW DXer.

And on the MW band every station you tune in will have one or more weak

stations underneath as it were, and during a deep fade, the "weaker" station might become strong enough to upset an AMSD more then most of us will experience on "most" HF/SW signals.

I brought the orignal thread up because I found the ELPAF really made some signals more intelligible and made others much more injoyble to listen to.

If I knew a year ago what I now know I might not have gone to the trouble
to build the outboard IF strip with AMSD etc. Then again I likely would

have gone ahead in my typical bull headed way.

The "funny" thing is I am more into utility listening, where there is very
little AM to benifit from a AMSD. Of course the Synch detector chip, Analog Devices AD607, is a very good SSB product detector.

Given the lack of posts and threads that have ANYTHING to do with SW, or indeed radio at all, I felt a need to pass this information on to those who might find it as usefull as I have.

Anybody who can expand on just the SSB performance of the 1103 against the Sony 7600GR? I'd like a little portable for mainly listening to 80/40-meter ham bands.
My DX398 is insensitive off the whip and my B45 is okay but tunes in 5khz increments,
fine tuning is touchy and seems to drift somewhat. Are the Sony or Degen any better??

I don't really care about FM or SWBC that much. Besides SSB, I'd use it for MW stations.

Thanks..

I give up, you win.
Only idoits and fools would bother to build any passive
AF fitlers. Please build all the active ELPAF filters your
heart desires. I made the mistake of assuming you where
a serious SWL.

I bet you would find the thought of building a clipper to limit
the AF level to a set of earphones with something as simple
as a couple of parallel 1N4004 diodes and a series resistor
so repulsive as to nearly make yo puke.

I can hear it now, "Oh My God, how simple."

I bet you could whip up a active limiter that would achieve
+/-0.0001dB clipping accuracy.

Too bad you make Cuhulin seem reasonable.

I can't PLONK you with Google beta, but I damn sure will ignore
your posts.

I was at the Wal Mart store this afternoon.The cheap old AM/FM radio I bought at a K Mart store about seventeen years ago,it quit working a few years ago.I looked at the auto radios in the store,I saw a price tag thingy on the shelf for a radio priced at about $27.00 but that radio wasen't on the shelf or I would have bought it.Radio listening when I am driving makes me nervous anyway,so I am not in any hurry.

I bought a dress thingy for $2.85 at the Goodwill store this afternoon too.I dont know what it's called,it is sort of like a dress but the lower part is made sort of like pants legs and it has a zipper from the waist on up.Of course I tried it on in the store before I bought it to make it fits me ok,it looks cute on me.

WLW has been #1 for about 20 years... that is several decades.

Unfortunately, like all the big news talkers, about 55% to 60% of the
audience is over 55, and of no sales value.
>
> So much for poor AM quality keeping listeners
> away.

It is very effectively doing that for most of the sales demos. Under 45,
this type of station is seldom even in the top 5... KFI in LA, #1 in LA 12+,
is 8th 25-54 and 14th 25-44. Younger, sales demos, will not listen.

But, in 25-54, AA scored better. The oldies format was all over 55. Air America was much better 25-54, although not a real challenger.
>
> That was why AA and Homer switched.

Sports, with little ratings, gets big revenue. It is about the only format that does.

Shore does remind me of the time when this beautiful bunch of wimmins was working at the good ol Goodwill store in Crawdad Louisiannna! Yep, shore enough does!!! :)

How was that Larry?

Watching ET (Entertainment Tonight) on tv,about Mel Gibsn.that Los Angeles County Sheriff guy looks just like James Whitmore.

www.capitolhillblue.com Mr.Gibson,your apology is not accepted.
FUBAR.

XM and Sirius stock are both off for missing the goals on subscriber
growth projections that now have been revised. The revised brake even
point is 1 to 2 years away for both companies. Might happen or it might
not.

Australia and NZ should be a snap for him. I expect that he should
finally get AFN in the Philippines from Hawaii and Guam.
